Radon is a colorless, odorless, and tasteless radioactive gas that occurs naturally in most rocks and soils. It is produced by the decay of uranium in soil, rock and water. Radon is harmlessly dispersed in outdoor air, but when trapped in buildings it can build up, increasing the risk of lung cancer.

The EPA Action Level: The U.S. EPA recommends that you take action to reduce radon levels that are 4.0 pCi/l or higher.

The EPA and the U.S. Surgeon General recommends all homes be tested for radon.

Zip codes in Elko County with no data: 89802, 89826, 89830

**Note: Results are based on independently tested home data from program-provided kits, radon professionals and radon labs, from 1989 to Mar, 31, 2019. When known, post-mitigation results are not included and usable results are valid tests, one per home, using the highest radon level on the lowest tested building. In most cases, the radon level is 4.0 pCi/l or lower.**
