## Preface

The Nevada Economic Assessment Project (NEAP) aims to provide county, state, and federal agencies, and their partners, with quantitative and qualitative baseline data and analyses to better understand trends in each county's demographic, social, economic, fiscal and environmental characteristics. The data can be used for land use and project planning, grant writing and overall policy assessment.

This report is intended to assist local, state, and federal agencies in better understanding the communities that we live in. Many of the counties in Nevada are small population, rural areas that do not have a large county government or their own economic development team. It can be a challenge for these counties to have in-depth quantitative analysis to use towards comprehensive planning strategies for the county and local communities.

The hope is that this report will be used as a tool for planning, aiming to assist the communities of Nevada. This report will not only lead readers to better understand their community's social, demographic, economic, and environmental trends, but will also help model the impacts of socioeconomic change.

---

Questions, concerns, other correspondence, and requests for additional information, may be sent to:

## Report Overview

### Purpose

The purpose of this report is to provide and use data to showcase socioeconomic and other trends in a county in Nevada. This will give local decision makers—elected officials, educators, nonprofits—the ability to better understand their constituents’ needs.

Counties statewide and nationwide are constantly challenged to make decisions revolving around economic, demographic, and land issues. This crafted report is a tool to respond to those issues with quantitative backings that can help make a case for any decision big or small. These backings are rightfully called a “county baseline,” wherein data that covers all social, demographic, economic, and land measures is delivered in a kindly and easy-to-browse manner. This allows counties to utilize the report as they see fit, and best respond to any current issue with quantitative data.

In short, this report helps counties and communities better understand what makes up their counties and communities. Varying factors in an economic climate, like businesses opening and closing; population increasing or decreasing; and average household size growing and shrinking, all of these factors put pressure on government and businesses themselves to make decisions and react to change. Any possible measure or statistic that may go towards helping make a better decision is included in this report.

It is also important to note that this report is not a one-time attempt at trying to make a one-time change. This report represents a commitment to communities, to counties, to the state, and beyond. Being a data repository of key measures, meaningful for communities, counties, and officials, its purpose is to reach out and help fill those gaps in decision-making, so that everyone may benefit.

### Process and Term Definitions

Appendix A is a glossary giving the definition of many of the terms found throughout this document. Please refer there for any terms that you need further information on.

Appendix B explains a few processes used commonly throughout the text. These processes are used to either make data more relatable to the reader or makes the data easier to compare.

- ❖ Indexing of Data
- ❖ Inflation Adjustments
- ❖ Suppressed Data
- ❖ Poverty

### Sources

An in-depth explanation of the sources used in this document may be found in Appendix C. This includes a listing of all the different sources used as well as some background and detail into each source.

In addition, each of the main sections will give a list of all of the sources used for data within that section. This shows on the first page of the section.

### Report Layout

Data was gathered from a variety of sources and compiled into a report broken down into easy-to-digest sections.

The report is broken down into six main sections:

- *Demographic Characteristics* covers general population demographics, such as population, age, and race
- *Social Characteristics* delves into poverty, education, school districts, and other aspects that impact the overall well-being of a community
- *Economic Characteristics* examines industry trends, including jobs, average annual earnings, and personal income breakdowns. This section also looks at the Gross Regional Product for the county and its industries, as well as Per Capita Income and how that compares to the statewide level
- *NAICS Sectors* takes an in-depth look at how industry contributes to the county’s economy. This includes measures of jobs, imports, earnings, and more.
- *Land Use and Fiscal Characteristics* details relevant data involving county land, taxes, and fiscal matters
- *Community Assets* is a qualitative look into the existing and desired qualities of the community

Within these sections are subsections consisting of specific economic data, accompanied by detailed tables and corresponding figures. Throughout the report there is an emphasis on changes and trends over the course of given time periods. Accompanying each table and figure are short analyses that highlight these changes and trends.

### Additional Documentation

This report will be accompanied by more documents for the benefit of the County and the community. This will include Fact Sheets that give a brief synopsis of this report and an Impact Report which will show the impact of industry change on the community.

## Cultural Overview

On Nevada's eastern border, White Pine County is bordered by Elko County to the north, Lincoln and Nye Counties to the south, Eureka County to the west, and the State of Utah to the east. With a diverse landscape, including 8,877 square miles of mountains, lakes, caves, campgrounds, foothills, valleys, rangeland, and desert, it is no understatement that White Pine's county slogan reads "in the middle of everywhere."

White Pine's rural landscape is the perfect backdrop for the county's half a dozen towns and census-designated places that put an emphasis on community. Through its outdoor recreational activity, rich history, seasonal and annual events, veteran appreciation, museums and the arts, and involved school district, White Pine remains a place proud to be called home. With its variety in destination, the county is also a place to which many tourists can travel to get away.

### Geography and Climate

Temperature in White Pine fluctuates on account of the wilderness areas, mountain peaks, and parks. In both the north and the south of the county, however, temperatures resemble each other relative to similar elevation. As far north as Cherry Creek and as south as Lund, the average January low is around 14°F and the average July high is around 90°F. In the southeast, within Great Basin National Park, the county's highest point, Wheeler Peak, reaches temperatures below zero. Otherwise, the rest of Great Basin National Park varies in temperature, with its makeup of ancient bristlecone pine groves, cave formations, mountain meadows, and wildlife such as elk, cougars, bobcats, and Nevada's state animal, the bighorn sheep.

Great Basin National Park is one of three national protected areas in White Pine, the other two being Ruby Lake National Wildlife Refuge, which is also part of Elko County, and Humboldt-Toiyabe National Forest, encompassing 19 counties through Nevada and California, making it the largest national forest in the contiguous 48 states. Within these national areas, as well as around the rest of the county, are 14 designated wilderness areas. As part of the White Pine County Conservation, Recreation and Development Act created by Congress on December 20, 2006, which recognized these wilderness areas, half of these areas make up the Humboldt-Toiyabe National Forest, while the other half are managed by the Bureau of Land Management (BLM). A full list of the wilderness areas is available at Nevada Wilderness.

Great Basin National Park is a national park composed of the Lehman Caves, multiple campgrounds mostly active in the summer months, hiking trails of varying difficulty, spots for fishing, and several visitor centers that span the length of the park. According to Travel Nevada, the park "is filled with incredible natural treasures like spectacular alpine lakes,

limestone caverns, the oldest living trees on planet Earth and the darkest night skies in the lower 48 states." Moreover, the park's management is dutiful to keeping the community alerted, as evidenced by examples in 2020 with COVID-19 work-arounds, and Wheeler Park Campground shutdowns because of site improvements to be made. Perhaps most alluring, as also pointed out by Travel Nevada: "this National Park boasts a feature that's hard to come by anymore: no crowds."

**For more information regarding White Pine County please visit the following websites:**

[White Pine County Website](#)

[Ely Website](#)

[McGill Website](#)

[White Pine County Extension Office](#)

As of 2016, Great Basin National Park was designated an International Dark Sky Park, which means the park "provides distinguished and significant opportunities to experience dark nights." Not only can campers see the stars on their own, but park programs bolster the experience for families and children. For example, the Star Train features park rangers guiding a tour on a train where along the way, passengers disembark to view the sky through high-powered telescopes. Similarly, the Full Moon Hike features a ranger who guides the tour "just after the sunset" into the moonlit sky. There is also solar telescope viewing in general, as well as the annual Astronomy Festival in the middle of September that consists of "three days and nights of astronomy-themed events, including the famous ranger talent show and stargazing through over 20 different telescopes" (National Park Service).

*For further geological information, please refer to the extensive historical article discussed on page V.*

### Community Involvement and Activity

All throughout the year in White Pine, community events draw locals and surrounding enthusiasts to the center of the county and around. At Cave Lake State Park, between Ely and Great Basin National Park, summer and winter months are packed with activities. As detailed on Nevada State Parks, in the summer, the water is primed for boating and fishing, with 32-acres of reservoir and a stock of Rainbow trout and German brown trout. At Cave Lake the White Pine residents and visitors swim, hike, camp, and mountain bike. "Once winter arrives, guests of the park can enjoy ice fishing, skating, snowmobiling and cross-country skiing. The park is also home to abundant and diverse wildlife."

In addition to these year-round activities and amenities, annual events like the Rotary Club Ice Fishing Derby, the Fire and Ice Winter Festival, and the Take it to the Lake Half Marathon showcase White Pine the community. The Ice Fishing Derby is a friendly outdoor gathering in January where folks celebrate their love for fishing. Likewise in the winter, the unique Fire and Ice Winter Festival is a 3-day festival with an ice sculpting competition followed by a fireworks train and the burning of the sculptures. Other competitions include bowling and ice horseshoes, and extend to indoor competitions as well, with bowling, darts, and billiards. Videos of Ely's Fire and Ice Winter Festival are available on Visit Ely Nevada's YouTube Channel, where event trailers showcase the variety of all the competitions, and footage of the final ceremonies can be viewed, where at least a thousand folks gather at night around the bonfire for cheer. In a similar vein, only at the end of summer as opposed to the middle of winter, the Take it to the Lake Half Marathon invites residents from White Pine and the surrounding regions to compete in a half marathon followed by a barbecue and a raffle. Hosting events like these are the Ely Outdoor Enthusiasts, a nonprofit organization whose mission is "to encourage people to be active and lead a healthy lifestyle through fitness events that raise funds for community-wide wellness while promoting tourism for White Pine County." The famous 6,800-mile American Discovery Trail also runs through the park, as well as White Pine itself, going through Preston, the Ward Charcoal Ovens, and past the park, into Baker and then into Utah (See Cultural Overview Figures 1 and 2 below).

*Cultural Overview Figure 1: The American Discovery Trail through Nevada*

Outside the festivities at Cave Lake State Park and Great Basin National Park, many more White Pine events throughout the region bring communities together. The inaugural Ely Film

Festival in 2020 marked the beginning of a new annual event that put an emphasis on student films as well as featured, award-winning films that have ties to Ely and White Pine County. Meanwhile the annual Race the Rails event, which started in 2017, furtherly showcases White Pine's involvement: White Pine County Tourism & Recreation hosts a mountain bike race alongside steam engines, with 100% of the proceeds being reinvested into the trail systems within White Pine. Alongside these events are others like the White Pine County Fair, the Fears, Tears, and Beers Mountain Biking Race, and Arts in the Park, where artists gather annually from across the U.S.

*Cultural Overview Figure 2: The American Discovery Trail Across the U.S.*

## History

White Pine's early history is mapped out extensively by Russell Richard Elliot in his article "The Early History of White Pine County, Nevada, 1865-1887." As early as 1855, the county's settlements began as a part of Utah territory. In the beginning, the county's places acted as "cut-offs" on routes to the West, for travelers to take. The Pony Express, for example, traversed through White Pine towards the west.

White Pine was excluded from the original Nevada territory in 1861, but by 1869, it was carved out as its own Nevada county. From there on out, its borders would later develop by acts of Nevada State Legislature: once in 1875, granting it a thirty by ninety-mile strip, and again in 1881, when a portion of White Pine was detached and granted to Eureka County. In the early period, White Pine was mostly a mining community, and the mining was concerned "almost exclusively with silver production" (Elliot 147). White Pine mining history can be broken down into various districts, which each had their own mining histories, from obscurities to booms. One of the largest discoveries was made on Treasure Hill in 1867, when a large silver deposit inevitably led to eight million dollars' worth of silver by 1873. The stories of how the discovery was made differs in parts, but a lot of accounts refer back to an Indian named Napias Jim who returned a favor made by A.J. Leathers, by giving Leathers "a piece of ore which, when melted, produced a button of silver" (150). This led Jim to showing

Leathers where he got the ore, which led to the subsequent booms, with the main rush happening between 1869 and 1870.

The early rush to White Pine is not without a little chaos. The “two opposing forces of whisky and religion” are referenced in the ins and outs of the Hamilton saloon and stores. At the same time, the historian wonders: “how all this mad mass of humanity managed to eat and sleep is a social phenomenon” (154). There were houses made of anything from rough or planed lumber, slabs, and pine logs to wooden blankets, raw hides, mud, and stone (154-155). In addition to this were many tents, because there was no hotel in the beginning of the rush. Even by 1869, when Hamilton, the then-county seat, was incorporated, there was no mayor. Several fires over the next few decades, and the transfer of the county seat to Ely, eventually turned Hamilton into a ghost town.

“The mines of White Pine County from 1869 to 1890 produced a lot more excitement than they did money” (157). That being said, “If the mines of White Pine did not produce the wealth expected of them, they did cause enough speculation to satisfy the mass of so-called capitalists who raided the districts” (159). As a society of mining communities, early White Pine was described as individualistic (160). There was a craze for bonanza, and homicides totaled twenty-one between 1868 and 1879, mostly from mining quarrels and drunken brawls. All this being said, there was a heavy sense for community and its development. The best example comes in the formation of a school district, election of a board of trustees, and the choice of a school teacher “before there was a single child in the community” (164). In White Pine there were many benevolent societies and clubs as well, including Masonic and Odd Fellow lodges, the Grand Army of the Republic composed of veterans (G.A.R.), The Order of Chosen Friends, Engine and Ladder Companies, and Guard Companies, among others. “Although the purpose of these [groups] was, in the beginning, one of a business nature, as time went on they became more and more the center of dances, parties, and other social pastimes” (165). The echo of these early beneficial organizations can be seen in White Pine today, with the nonprofit organizations that provide the county with a way to connect.

After these early days, copper replaced silver, and then White Pine became the most productive mining and smelting region in the state, and between 1902 made more than \$1.0 billion in ore. Pits were located at Ruth and Kimberley, and the large smelter at McGill. To this day, however, as mining eases, there is a lot more emphasis on tourism and recreation. “As the rest of the West becomes increasingly crowded, visitors seem to be drawn more and more to the vast open spaces of White Pine County, where solitude and quiet can still be found in abundance” (elynevada.net).

## White Pine Now

On June 15, 2020, the Ely Times reported a story of White Pine food banks keeping children from hunger. The First Baptist Church held distributions through the USDA and the Northern Nevada Food Bank, marking the seventh year that these distributions have reached folks in need in White Pine. A few months before the outbreak of COVID-19, there was the story of the drug court giving a second chance to those battling addiction. The court’s graduates shared their arduous journeys and the overseeing district court judge spoke on the importance of the program. Around the same time, the David E. Norman Elementary School robotics team travelled to Henderson, Nevada for the robotics championship, and took home three of the tournament’s highest awards. Out of the 62 teams, all five White Pine teams finished in the top 50%.

In White Pine they know each other. Groups and organizations like White Pine County Clutter, White Pine County Tourism & Recreation, and White Pine Living are comprised of community members remaining in-touch online and in-person. A certain online group described the county’s involvement as feeling “the tug of White Pine.” From the county’s beginnings, where a school district was formed and benevolent societies promoted the development of the county, into today, White Pine stands out as a community in solidarity.

# Demographic Characteristics

This section includes demographic measures of population, gender, age, race and ethnicity, households and families, housing, housing occupancy, housing owner/renter status, housing structure type, housing age, and veteran demographics.

These measures act as the core of the county baseline, gauging the lifespan of the community, the community makeup, and, to an extent, the community culture. Data here are relevant for any further analysis, such as calculating effects of new jobs, allocating individuals as the population rises, plotting and constructing new homes and neighborhoods, and more.

## Demographic Characteristics

Data in this section is sourced from:

- Nevada Department of Employment, Training and Rehabilitation
- US Census Bureau
  - American Community Survey

## County Breakdown

**Population, Gender, Age, Race and Ethnicity:** White Pine's population was on the rise from 2010-2014. It reached its peak in 2014 with 10,043 people. Since then, the population has been on a constant decline. White Pine's population has remained predominantly male over the past decade from 2010 to 2020. However, it is increasingly becoming more and more male dominated, going from 51.4% in 2010 to 59.9%. While the male population continues to grow the female population decreases. The median age for White Pine County has stayed right around 40 years old from 2010 to 2020. The second highest age group is 45 -64 years old. Those under 19 years old used to be tied with those 45-64 years old for the age group with the majority back in 2010. White Pine has remained mostly white at over 70% from 2010 to 2020. However, more diversity can be seen making its way into White Pine. The Hispanic population has gone from 12.2% to 16.5% over the ten years, but the biggest increase can be seen in the black community rising from 0.6% to 6.2%.

**Households, Families, and Housing:** White Pine's households have increased over a little 7% from 2010 to 2020. While total households have increased over the ten-year period, the total number of families in White Pine have decreased more than 8%. The housing median experienced a dip after 2010, possibly due to the recession in 2008. After reaching a low in 2012, the housing median began to rise gradually and consistently.

**Veteran Demographics:** The veteran population in White Pine has decreased by 37% from 2010 to 2020. The veteran population remains mostly male at 91.6% and only 8.4% female. The large decrease in veterans can mostly be seen in the male population. Most veterans in White Pine County are aged 65-74 years old at 37.3%, followed by 35-54 years old.

## Population

### Definition

Population is all people, male and female, child and adult, living in a given geographic area.

### Why is it important?

Population is the baseline measurement for most all other sociodemographic and economic metrics. Population data acts as the foundation for measures such as the inflow, outflow, and number of employees, the use of public and private lands and businesses, education, and overall activity. It is a needed metric in order to account for any type of change to the community.

### County Breakdown

White Pine's population was on the rise from 2010-2014. It reached its peak in 2014 with 10,043 people. Since then, the population has been on a constant decline. Nevada's population reflects just the opposite of White Pine's. Nevada's population has been increasing since 2013 only having a slight dip in 2018, but after the dip it is back on the rise.

Figure 1. White Pine Population, 2010 to 2020

Table 1. White Pine Population Distribution, 2010 to 2020

Year	White Pine Population	White Pine 1-Year Change	Nevada 1-Year Change
2010	9,765	-	-

Figure 2 White Pine vs. State Comparison, One-Year Population Change, 2011 to 2020

## Gender

### Definition

Gender is the Census Bureau's method of capturing a person's sex. In their extended glossary they acknowledge the interchangeability of the terms gender and sex as well as gender being a social construction. At the same time, they aim to capture the sex composition of the population.

### Why is it important?

Gender is a key metric for advertisers, business owners, and decision makers. Certain demographic surveys maintain that men may gravitate towards certain lifestyles and women others, while other surveys maintain that this is not the case. One of gender data's more common uses is to acknowledge the gaps, because the general national trend is near a fifty-fifty split.

Table 2. White Pine Gender Distribution, 2010 to 2020

Year	White Pine Male	White Pine Female	Nevada Male	Nevada Female
2010	51.4%	48.6%	50.6%	49.4%
2012	53.6%	46.4%	50.5%	49.5%
2014	56.4%	43.6%	50.4%	49.6%
2016	58.2%	41.8%	50.2%	49.8%
2018	58.6%	41.4%	50.2%	49.8%
2020	59.9%	40.1%	50.2%	49.8%

Figure 3 White Pine vs State Comparison, Gender, 2010 to 2020

### County Breakdown

White Pine's population has remained predominantly male over the past decade from 2010 to 2020. However, it is increasingly becoming more and more male dominated, going from 51.4% in 2010 to 59.9%. While the male population continues to grow the female population decreases.

This is not similar to the states gender distribution, where its more evenly distributed between male and female at about 50% to 50%.

## Age

### Definition

Census Bureau programs define age as the length of time in completed years that a person has lived. The Census Bureau's national surveys compute age as of the interview date.

### Why is it important?

Age is a key indicator of the type of individuals within a community, and therefore the type of community and its overall activity. Those in charge of schools, hospitals, retirement homes, housing development, and all types of businesses require age data in order to account for anticipated change. Age data is especially used for public services ranging from use of parks to law enforcement, and even companies who need to tailor their marketing to specific groups.

Table 3. White Pine Median Age, 2010 to 2020

Year	White Pine Median Age	Nevada Median Age
2010	41.8	35.9
2012	42.0	36.3
2014	39.6	36.9
2016	39.1	37.5
2018	39.2	37.9
2020	40.8	38.2

Source: US Census Bureau/American Community Survey. "DP05: Demographic and Housing Estimates" Multiple years: 2006-2010 through 2016-2020 American Community Surveys.

### County Breakdown

The median age for White Pine County has stayed right around 40 years old from 2010 to 2020. The second highest age group is 45 -64 years old. Those under 19 years old used to be tied with those 45-64 years old for the age group with the majority back in 2010.

Nevada's median age has continued to rise from 2010 to 2020, it has gone from 35.9 years to 38.2 years. Increasing every year and it seems like it will continue too.

Figure 4 White Pine vs State Comparison, Median Age, 2010 to 2020

Table 4. White Pine Age Distribution, 2010 to 2020

Year	Under 19	20 – 44 Years	45 – 64 Years	65 and Older

Figure 5. White Pine Age Distribution, 2010 to 2020

## Race and Ethnicity

### Definition

As per the U.S. Census Bureau definition, the data on race is derived from answers to the question on race. This data is based on self-identification, and is not an attempt to define race biologically, anthropologically, or genetically. Regarding ethnicity, the U.S. Census Bureau also adheres to the OMB definition. There are two minimum categories for ethnicity: Hispanic or Latino and Not Hispanic or Latino. OMB considers race and Hispanic origin to be two separate and distinct concepts. Hispanics and Latinos may be of any race.

On this page, 'White', 'Black', 'American Indian', and 'Other' all represent percent of population of non-Hispanic origin. All population, regardless of race, with a Hispanic origin is shown under the 'Hispanic' heading.

### Why is it important?

Race and Ethnicity data is used by advertisers to tailor their marketing strategy to certain groups. Business owners also consult this demographic data to locate their brick and mortar stores in certain areas, and to market to the consumer. One of race and ethnicity data's main uses is to get an overall scope of the makeup and diversity of the community.

### County Breakdown

White Pine has remained mostly white at over 70% from 2010 to 2020. However, more diversity can be seen making its way into White Pine. The Hispanic population has gone from 12.2% to 16.5% over the ten years, but the biggest increase can be seen in the black community rising from 0.6% to 6.2%.

Table 5. White Pine Race/Ethnicity Distribution, 2010 to 2020

Year	White	Hispanic	Black	Amer. Indian	Other
2010	77.4%	12.2%	0.6%	5.1%	4.7%
2012	76.2%	13.2%	2.4%	6.0%	2.2%
2014	74.8%	14.3%	3.9%	4.3%	2.8%
2016	73.2%	15.0%	4.1%	5.8%	1.8%
2018	72.2%	15.6%	5.2%	5.0%	2.0%
2020	71.5%	16.5%	6.2%	3.7%	2.1%

Figure 7 White Pine Race and Ethnicity, 2010 to 2020. Index: 2010 = 100

## Households and Families

### Definition

A household includes all the people who occupy a housing unit (such as a house or apartment) as their usual place of residence. Families are groups of two or more people (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such people are considered as members of one family.

### Why is it important?

When used alongside poverty, income, and school district data, households and families data informs decision makers of needs for children and lower income families, as well as the community's general wellbeing. Utilized with GIS mapping, it allows analysts to identify community segments and patterns.

Table 6. White Pine Total Households, 2010 to 2020

Year	White Pine Households	White Pine 1-Year Change	Nevada 1-Year Change
2010	3,480		
2012	3,479	-2.4%	0.6%
2014	3,373	0.5%	0.7%
2016	3,158	-0.9%	1.4%

Figure 8. White Pine vs State Comparison, Annual Change of Total Households, 2011 to 2020

Figure 9. White Pine vs State Comparison, Annual Change of Total Families, 2011 to 2020

### County Breakdown

White Pine's households have increased over a little 7% from 2010 to 2020. While total households have increased over the ten-year period, the total number of families in White Pine have decreased more than 8%.

Compared to the whole state of Nevada this is different. Both total households and families have been on a consistent rise since 2014. This shows growth occurring in the state overall.

Table 7. White Pine Total Families, 2010 to 2020

Year	White Pine Families	White Pine 1-Year Change	Nevada 1-Year Change

## Housing

### Definition

A housing unit, as defined for purposes of these data, is a house, an apartment, a group of rooms, or a single room intended for occupancy as separate living quarters. Housing unit value is the appraisal worth.

### Why is it important?

Housing is a measure of economic prosperity and general quality of living. Business owners and government decision makers are interested in certain segments of the community on all slides of the economic scale. Such a catalog of housing values allows new developments, both commercial and governmental, to be planned accordingly. To ensure accuracy, housing data should be compared with per capita income and poverty data. For example, while household income and family income may vary even in the same neighborhood, housing prices in the same range tend to be grouped together.

### County Breakdown

The housing median experienced a dip after 2010, possibly due to the recession in 2008. After reaching a low in 2012, the housing median began to rise gradually and consistently. The same dip White Pine experienced after 2010, Nevada experienced as well but at a much larger scale.

The housing unit value distribution in White Pine County has stayed relatively the same from 2010 to 2020, although there are some substantial changes worth mentioning. The housing units valued \$50,000 or less have decreased 7%, while those valued \$200,000 - \$300,000 have increased by 12%.

Table 8 White Pine Median Housing Unit Value, 2010 to 2020

Year	White Pine Median	Nevada Median
2010	\$141,768	\$306,702
2012	\$129,152	\$220,528

## Housing Occupancy

### Definition

A housing unit is vacant if no one is living in it at the time of enumeration, unless its occupants are only temporarily absent. Units temporarily occupied at the time of enumeration entirely by people who have a usual residence elsewhere are also classified as vacant.

### Why is it important?

Housing occupancy data shows how active, filled, or abandoned a community is. Judging from the number of occupied units versus vacant units, those in charge of city planning can estimate room for improvement or demolition. This is especially important if there is an expectation of a sudden inflow of new citizens to the community.

### County Breakdown

The housing occupancy in White Pine is similar to that of the whole state of Nevada. From 2010-2020 occupied households in both White Pine County and Nevada have increased by nearly 5%. While the occupied units increased it caused the vacant units to decrease. Once again showing signs of growth for both the county and state. However, there were a couple years in White Pine County that occupied units actually decreased reaching 71.1%.

Figure 11 White Pine vs State Comparison, Housing Occupancy, 2010 to 2020

Table 10. White Pine Housing Occupancy, 2010 to 2020

Year	White Pine Occupied HH	White Pine Vacant HH	Nevada Occupied HH	Nevada Vacant HH

## Housing Owner/Renter

### Definition

A housing unit is owner occupied if the owner or co-owner lives in the unit even if it is mortgaged or not fully paid for. All occupied units which are not owner occupied, whether they are rented for cash rent or occupied without payment of cash rent, are classified as renter occupied.

### Why is it important?

Owner-occupied versus renter-occupied housing data paints the picture of the types of individuals that make up the community. With this data, individuals in charge of storefronts, community buildings, and public services can tailor their activity. A larger percentage of homeowners in the county perhaps suggests a more long-term community. A lower percentage of homeowners might suggest an overall difficulty to own.

Figure 13 White Pine Owner vs Renter Occupied Housing, 2010 to 2020

Table 11. White Pine Owner vs. Renter Occupied Housing Distribution, 2010 to 2020

Year	Occupied Housing Units	Owner Occupied	Renter Occupied
2010	3,480	76.6%	23.4%
2012	3,479	67.5%	32.5%
2014	3,373	73.1%	26.9%

Source: US Census Bureau/American Community Survey. "DP04: Selected Housing Characteristics" Multiple years: 2006-2010 through 2016-2020 American Community Surveys.

### County Breakdown

The owner-occupied housing units compared to the renter-occupied units in White Pine County have stayed mostly the same from 2010-2020, right around 73% owner to 27% renter. There are some years that the ratio of owner to renter occupied was greatly different. In 2012 there was only 67.5% owner occupied, with 32.5% renter occupied.

The average household size in White Pine County for both owners and renters have been going down since 2010. Falling from nearly 3 persons to only 2. The average household size for both owners and renters in Nevada have stayed at 2.7 persons for owners and 2.7 for the renters from 2010. Up until recently in 2020 the average renter occupied household size dropped to 2.58.

Figure 14 White Pine Average Household Size, 2010 to 2020

## Housing Structure Type

### Definition

The statistics, by type of structure, refer to the structural characteristics of the building. The one-unit structure category is a single-family home. It includes fully detached, semidetached (semi-attached, side-by-side), row houses, and townhouses. Multifamily structures are classified by the number of housing units in the structure.

### Why is it important?

Housing structure type data suggests level of permanence in the community. It also says something of the range and diversity of habitants. Cities are likely to have more multiple unit structures rather than a highly predominant single unit makeup. Along these same lines, structure type data speak to the community as being rural or urban. While this may be obvious already, the trend line in housing structure type can give a hint to the exact type of rural-urban split. Comparisons can be made to personal income and per capita income to better determine the overall community makeup.

### County Breakdown

The housing structure type in White Pine is mostly single units, followed by mobile homes/RVs. It has been like this from 2010 to 2020. Although, the single units have started to decrease slightly from nearing 80% down to 74% and mobile homes increased from 14.4% to 19.5%.

Table 13. White Pine Housing Structure Type, 2010 to 2020

Year	Single Unit	2- to 4- Units	5- to 19- Units	20+ Units	Mobile Home, RV, etc.
2010	79.7%	4.8%	1.0%	0.2%	14.4%
2012	78.2%	4.1%	1.6%	1.0%	15.0%
2014	81.2%	4.4%	1.4%	1.3%	11.8%
2016	79.9%	5.4%	1.1%	1.7%	11.9%

Figure 16 White Pine Housing Structure Type, 2010 to 2020. Index: 2010 = 100

## Housing Age

### Definition

The housing age is the year in which the house was built.

### Why is it important?

Housing age is an indicator of the general age of the community, and thus an indicator of the community's culture. It shows overall progress and development. A strong presence of newer homes indicates expansion and growth.

### County Breakdown

A majority of homes in White Pine County were built in 1959 or earlier at 37.7% in 2020, they were nearly at 50% in 2012. Newer homes can start to be seen developing in White Pine, with homes built in 2000 or later increasing by more than 9%. The second most popular aged housing are those units built in 1980-1999 at 28.4%.

Table 14. White Pine Housing Age Distribution, 2012 to 2020

Year	Built 2010 or Later	Built 2000-2009	Built 1980-1999	Built 1960-1979	Built 1959 or Earlier
2012	0.5%	4.5%	28.9%	16.6%	49.5%
2014	0.7%	5.3%	29.4%	15.0%	49.6%
2016	0.0%	9.3%	30.9%	15.7%	44.1%

Figure 17. White Pine Housing Age Distribution, 2020

## Veteran Demographics

### Definition

A "civilian veteran" is a person 18 years old or over who has served, but is not now serving, on active duty in the U.S. Army, Navy, Air Force, Marine Corps, or the Coast Guard, or who served in the U.S. Merchant Marine during World War II. People who served in the National Guard or military Reserves are classified as veterans only if they were ever called or ordered to active duty, not counting the 4-6 months for initial training or yearly summer camps.

### Why is it important?

Veteran data does not give way to conclusive analysis. Good reference points are per capita income and poverty. Veteran data is an indicator for the development of programs and services designed for veterans. If it does not indicate a strength or sign of community support for veterans, then it indicates the potential for such support.

### County Breakdown

The veteran population in White Pine has decreased by 37% from 2010 to 2020. The veteran population remains mostly male at 91.6% and only 8.4% female. The large decrease in veterans can mostly be seen in the male population. Most veterans in White Pine County are aged 65-74 years old at 37.3%, followed by 35-54 years old.

The veteran population in Nevada decreased as well but not nearly as much as White Pine's. Like White Pine, Nevada's veteran population is mostly male at 90.3%. The age distribution of veterans in Nevada is somewhat evenly spread, with the majority being 65-74 years old at 26.6%.

# Social Characteristics

This section includes social measures of educational attainment, veterans, and school districts. It also goes in-depth regarding poverty, showing the difference between the poverty threshold and guidelines and poverty measures for the county and state.

These data measures determine need or revaluation for community assistance programs; gaps or successes in general school planning and budgeting; the ability to fill job spots through educational attainment and availability; and the potential for interaction between schools, graduating classes, and the growing, surrounding community.

## Social Characteristics

Data in this section is sourced from:

- Nevada Report Card
- US Census Bureau
  - American Community Survey
- US Department of Health and Human Services

## County Breakdown

**Educational Attainment:** White Pine’s educational attainment levels have slightly increased from 2010 to 2020. Those with an education level less than high school has decreased greatly. While those with an education of high school graduate or higher has increased. This shows great growth for the education in White Pine because with their population has been increasing and they are managing to produce well educated people.

**Poverty:** Between 2013 and 2020 the poverty levels in White Pine have fluctuated up and down but not by much. Those falling below the 1.00 poverty line have decreased by .5% and those falling below the 2.00 poverty line have decreased from 31.9% to 27.4%. Although it is not the biggest change in the world it is still a good sign for White Pine County as fewer people are falling below poverty levels. White Pine even reached a low 10.9% falling below the 1.00 poverty line and 28.8% below the 2.00 poverty line. Unfortunately, it rose back up the following years, but it is still lower than what it was in 2013.

**School Districts:** White Pine’s number of students enrolled in school has gone down from 2013 to 2021. There was one year were those students enrolled increased to 1,655 but the next year in 2020 they fell back to 1,216. On the other hand, Nevada’s number of students enrolled has been increasing every year since 2010. The student population in White Pine is split 51.2% male and 48.8% female in 2021. The population used to be even at 50-50 in 2010, but since then male population has surpassed the female population.

## Educational Attainment

### Definition

Educational attainment refers to the highest level of education completed in terms of the highest degree or the highest level of schooling completed. Individuals reported in this measure are over 25 years old.

### Why is it important?

Education data is a sign of workforce skill. In other words, a higher percentage of higher-end educational attainment helps indicate the type of labor force in a region. For example, a tech company might be more interested in opening up a facility with a higher focus of Bachelor's or Graduate degree obtainers. This data also, simply put, indicates a county's ability to enforce education. A lower percentage of high school graduates could suggest either a needed improvement at the schools themselves or a needed improvement on the community as a whole, in terms of data such as crime rates and poverty.

### County Breakdown

White Pine's educational attainment levels have slightly increased from 2010 to 2020. Those with an education level less than high school has decreased greatly. While those with an education of high school graduate or higher has increased. This shows great growth for the education in White Pine because with their population has been increasing and they are managing to produce well educated people.

Nevada's educational attainment levels reflect the same thing as White Pine. More students are finishing high school and graduating and continuing on to higher education. People with a bachelor's degree or higher in Nevada have gone from 21.8% to 25.5%.

Table 16 White Pine Condensed Education Levels, 2010 to 2020

Year	White Pine < H.S.	White Pine Bachelor+	Nevada < H.S.	Nevada Bachelor+
2010	16.3%	13.4%	15.7%	21.8%
2012	16.7%	13.1%	15.6%	22.2%
2014	14.9%	15.5%	15.1%	22.6%

## Veteran Educational Attainment

Figure 20 White Pine vs State Comparison, Ten-Year Change of Veteran Educational Attainment, 2010 to 2020

### Definition

Educational attainment refers to the highest level of education completed in terms of the highest degree or the highest level of schooling completed. Attainment here is applied to civilian veterans.

### Why is it important?

Veteran Educational Attainment data is a good marker for social and personal reform. Education here is a baseline indicator for a veteran's ability to enter the work force. There are other factors and outliers that must be considered, but as a general assumption: the higher the attainment and the more prevalent the rates above high school, the easier it is for veterans to enter the work force.

### County Breakdown

It is difficult to track real educational change among veterans in White Pine because total veterans decreased by 37.0%. When it comes to the educational numbers, this equates to large changes mostly because of the population change. In other words, there are 500 less veterans, so it makes sense that there are instantly 250 less high school graduates. However, most veterans still have an education level of some college, associate's degree. This noteworthy because despite the change in veteran population, more than half have an education level equivalent to college or higher.

Table 18 White Pine Veteran Educational Attainment, 2010 to 2020

Veterans	White Pine		Percent of Total 2020		2010 to 2020 10-Year Change	
	2010	2020	White Pine	Nevada	White Pine	Nevada
<b>Veteran Population</b>	1,234	778			-37.0%	-12.1%
<b>Less than High School</b>	144	15	1.9%	4.3%	-83.5%	-33.9%
<b>High School Graduate</b>	404	273	35.1%	24.4%	7.3%	-13.8%
<b>Some College, Associate's Degree</b>	517	361	46.4%	43.7%	10.7%	4.2%
<b>Bachelor's Degree and Higher</b>	170	129	16.6%	27.5%	20.2%	18.7%

## Poverty Threshold

### Definition

The Census Bureau gives the following **definition of poverty**:

*The Census Bureau uses a set of money income thresholds that vary by family size and composition to determine who is in poverty. If the total income for a family or unrelated individual falls below the relevant poverty threshold, then the family (and every individual in it) or unrelated individual is considered in poverty.*

This definition covers the poverty threshold, but not the poverty guidelines, which are covered more on the next page.

### There are two different poverty levels?

Yes, the federal government has two separate measures of poverty. The first is the **Census Bureau's "Poverty Thresholds"**. The second is the **Department of Health and Human Services' (HHS) "Poverty Guidelines"**. These are distinct terms with different formulas and different uses. The main use for the poverty thresholds created by the Census Bureau is statistical; that is, it is used in the calculating of the total number of people in poverty. HHS's poverty guidelines are for administrative purposes, mainly used to determine financial eligibility for certain programs.

Figure 21. Census Bureau Weighted Average Poverty Thresholds by Family Size, 2021

### How does the makeup of the household affect each poverty level?

Both the thresholds and guidelines **take into account the total number of people in the household/family** that is being assessed. A two-person household has a lesser monetary level to be considered in poverty than a four-person household in both the threshold and guidelines. The guidelines do not factor in age in the calculations. The thresholds do, on the other hand, factor in age. Both the total number of children and, for one- and two-person households, the elderly, are considered.

Table 19. Poverty Thresholds by Size of Family and Number of Related Children, 2021

Size of Family Unit	Related Children under 18 Years-Old							
	None	One	Two	Three	Four	Five	Six	Seven
<b>One person</b>								
Under age 65	14,097							
Aged 65 and older	12,996							
<b>Two people:</b>								
Householder under age 65	18,145	18,677						
Householder aged 65+	16,379	18,606						
<b>Three people</b>	21,196	21,811	21,831

### Some of the Federal Programs that use the Poverty Guidelines:

- Head Start
- Low-Income Home Energy Assistance
- Parts of Medicaid
- Children's Health Insurance Program
- Medicare Prescription Drug Coverage
- Family Planning Services
- SNAP
- WIC
- School Free and Reduced Meals
- EFNEP
- Weatherization Assistance Program
- Job Corps
- Foster Grandparent Program

### Are there cost of living adjustments based on where someone lives?

The quick answer is **no, not within the contiguous 48 states**. The poverty threshold has the same monetary level throughout the entire United States for any given year. There is no variation for any state, city, or other area. The poverty guidelines have a single monetary level for the 48 contiguous states and Washington DC, but a separate set of figures for each of Alaska and Hawaii.

Table 21. Poverty Guidelines by Most Commonly Used Percentages for Assistance Programs, Contiguous 48 States, 2021

\*For families/households with more than 8 persons, add \$4,540 for each additional person (at 100%).

## Poverty in Nevada

**This report is using both the threshold and guidelines.**

Any page in this document that gives a count of people in poverty is using the Census Bureau's threshold. This includes the tables found within this section, such as the general population poverty numbers and veteran poverty numbers. Sections that show numbers regarding a part of the population on an assistance program will be using the HHS's guidelines. That includes school free and reduced lunch, among others.

Figure 22 White Pine vs State Comparison, Ratio of Income to Poverty Thresholds, 2013 to 2020

Table 22. White Pine Condensed Poverty Levels, 2013 to 2020

Year	White Pine Below 1.00 Poverty Level	White Pine Below 2.00 Poverty Level	Nevada Below 1.00 Poverty Level	Nevada Below 2.00 Poverty Level
2013	12.9%	31.9%	15.0%	35.6%

### County Breakdown

Between 2013 and 2020 the poverty levels in White Pine have fluctuated up and down but not by much. Those falling below the 1.00 poverty line have decreased by .5% and those falling below the 2.00 poverty line have decreased from 31.9% to 27.4%. Although it is not the biggest change in the world it is still a good sign for White Pine County as fewer people are falling below poverty levels. White Pine even reached a low 10.9% falling below the 1.00 poverty line and 28.8% below the 2.00 poverty line. Unfortunately, it rose back up the following years, but it is still lower than what it was in 2013.

When it comes to whole state of Nevada a similar, yet better trend can be seen in the poverty numbers from 2013 to 2020. Both those falling below the 1.00 and 2.00 poverty line have been on a constant decline since 2013. Now reaching a low in 2020 of 12.8% below the 1.00 line and 31.6% below the 2.00 line. Displaying great economic development in the state.

Table 23. White Pine Ratio of Income to Poverty Level Distribution, 2013 to 2020

Year	Population	Below .50 Poverty Level	.50 to 1.00 of Poverty Level	1.00 to 1.25 of Poverty Level	1.25 to 1.50 of Poverty Level	1.50 to 1.85 of Poverty Level	1.85 to 2.00 of Poverty Level
2013	9,093	4.3%	8.6%	5.2%	3.8%	7.6%	2.4%
2014	8,891	3.7%	7.3%	3.3%	4.3%	7.6%	3.6%
2015	8,591	3.7%	7.8%	4.5%	4.8%	6.6%	3.5%
2016	8,374	6.0%	6.8%	5.1%	5.3%	7.6%	4.3%

## Veteran Poverty

Figure 23 White Pine vs State Comparison, Percent of Veteran and Non-Veteran Populations in Poverty, 2013 to 2020

Figure 24. White Pine vs State Comparison, Veteran and Non-Veteran Populations in Poverty, 2013 to 2020, Index 2013 = 100

### How are the poverty threshold and guidelines calculated?

Both the Census Bureau and HHS **update their poverty levels annually using** the Consumer Price Index for all Urban Consumers (**CPI-U**).

The **thresholds** are calculated by updating the original threshold matrix created in 1978 via the CPI-U. The Census Bureau issues preliminary thresholds in January and the final thresholds in September for the previous year. That is, the preliminary poverty thresholds for 2017 were issued in January 2018 and then updated in September 2018 for the final poverty thresholds. This is then used to measure poverty for the calendar year 2017, reflecting the 2017 calendar year price level.

The poverty **guidelines** are issued every January, calculated from the thresholds finalized the previous year. Thus, the 2017 guidelines were issued in January 2017 calculated from the calendar year 2015 thresholds finalized in September 2016. Due to this, the 2017 guidelines are roughly equal to the 2016 thresholds.

Table 24 White Pine Condensed Poverty Levels, 2013 to 2020

Year	White Pine Veterans	White Pine Non-Veterans	Nevada Veterans	Nevada Non-Veterans
2013	5.4%	11.3%	7.1%	13.6%
2014	6.1%	9.0%	7.4%	14.2%
2015	5.9%	9.9%	7.5%	14.1%
2016	8.3%	10.1%	7.6%	13.6%

2018	5.8%	10.0%	7.8%	12.5%
2019	7.0%	11.9%	7.6%	12.1%
2020	6.6%	12.1%	7.6%	11.8%

Source: US Census Bureau/American Community Survey. "S2101: Veteran Status" Multiple years: 2009-2013 and 2016-2020 American Community Surveys.

### County Breakdown

Veteran poverty has increased in White Pine from 2013 to 2020. This is not good, as the lower the poverty percentage means the better the economy. White Pine did see veteran poverty reach a low 4.4% in 2017 but started to rise years after. White Pine's veteran poverty percentage is lower when compared to Nevada's veteran population. Nevada's veteran population has stayed the same over the years with only .2% fluctuation.

## School District Population

### Definition

School District population data shows the total students enrolled in all K-12 institutions, as well as a breakdown of gender.

### Why is it important?

School District population data acts as a springboard for other measures of staffing, special populations, class size, and per pupil expenditures. This helps administrators, business owners, and general decision makers in commercial and governmental planning and budgeting matters. For example, a new project that is bringing a couple hundred jobs into the region may also bring a couple hundred workers and families. The number of schoolchildren for each year is crucial for planning ahead, especially when considering the transition to middle school and high school, in order to see if adjustments are necessary.

Table 25. White Pine School District Enrollment, 2011 to 2021 Selected Accountability Years

Accountability Year	White Pine	Nevada
2010-2011	1,403	437,057
2012-2013	1,407	445,381

Source: NevadaReportCard.com

Figure 26 White Pine vs State Comparison, School District Distribution by Gender, 2010 to 2021 Accountability Years

### County Breakdown

White Pine's number of students enrolled in school has gone down from 2013 to 2021. There was one year where those students enrolled increased to 1,655 but the next year in 2020 they fell back to 1,216. On the other hand, Nevada's number of students enrolled has been increasing every year since 2010. The student population in White Pine is split 51.2% male and 48.8% female in 2021. The population used to be even at 50-50 in 2010, but since then male population has surpassed the female population.

## School District Race and Ethnicity

### Definition

This data is a measure of the race and ethnicity of each student in the county's school district. For the definition of race and ethnicity, please see the demographic characteristics section.

### Why is it important?

While race and ethnicity data for the general population is most important for advertisers and business owners, race data for school districts allows local decision makers to get an overall picture of the makeup of schools. Diversity programs improve equality yet, in order to develop a model, this data here should be supplemented with in-person experience of the county. Moreover, poverty data and free and reduced lunch populations should be consulted.

Figure 27 White Pine vs State Comparison, School District Distribution by Race and Ethnicity, 2011 to 2021 Accountability Years

### County Breakdown

White Pine's school district population is mostly white at 70.3%. It used to be even higher at almost 75% in 2010, since then more ethnic groups have started to move in the area. The biggest increase can be seen in the black community going from .8% in 2010 to 6.5% in 2019. The Hispanic community also rose by 3% from 2010 to 2021. This is very different compared to Nevada where races are more evenly spread. The majority being Hispanic at 43.4% followed by white at 30% then other races at 14.8% and the black community at 11.8%. It can be seen that as the white population started to decrease in Nevada after 2010, all the other races increased.

Table 27. White Pine School District Race and Ethnicity, 2011 to 2021 Selected Accountability Years

Accountability Year	White Pine				Nevada			
	White	Black	Hispanic	All Other	White	Black	Hispanic	All Other
2010-2011	74.8%	0.8%	15.4%	8.8%	38.7%	9.9%	38.8%	12.7%

## School District Special Populations

### Definition

The individualized education program (IEP) is a written statement for each child with a disability that is receiving special education services that is developed and reviewed by the IEP Team. (From the act, IDEA)

An English language learner (ELL) is a person who is learning the English language in addition to his or her native language or any other languages they may speak.

### Why is it important?

Special populations data allows individuals with an impact on school programs to develop programs or make adjustments. School boards, government heads, and even teachers can use this data to start initiatives or remodel already-existing plans.

Table 28 White Pine School District Individual Education Program Population, 2011 to 2021 Selected Accountability Years

Accountability Year	White Pine IEP	Nevada IEP
2010-2011	12.0%	10.8%
2012-2013	11.5%	11.0%
2014-2015	14.7%	11.8%
2016-2017	15.0%	12.2%
2018-2019	16.4%	12.2%
2020-2021	16.9%	12.6%

Source: NevadaReportCard.com

The symbol '-' indicates data not presented for groups less than ten, suppressed due to FERPA regulations.

The text 'N/A' indicates that the population was not present.

The symbol '-' indicates data not presented for groups less than ten, suppressed due to FERPA regulations.

The text 'N/A' indicates that the population was not present.

Figure 29 White Pine vs State Comparison, School District English Language Learner Population, 2010 to 2021 Accountability Years

### County Breakdown

White Pine's IEP population has been steadily rising from 2010 to 2021. It was at 12% now it is up to 16.9%, which is higher than Nevada's IEP population. White Pine's IEP population has remained higher than Nevada's for the 11 years from 2010 to 2021.

White Pine's ELL population is far less than the IEP population at 2.0%. This is a decrease from the previous 3.5% recorded in 2010. There was a low 1.8% in 2016 but it rose back up the following year. Nevada's ELL population is much larger compared to White Pine at 13.4%. However just like White Pine, this is a decrease from Nevada's previously recorded 20.0% ELL in 2010.

## Free and Reduced Lunch Population

### Definition

Free and Reduced Lunch (FRL) is a program offered to students who qualify according to family size and income. This qualification is generally the student's household income at 185% of the poverty guideline.

### Why is it important?

Like with the other special populations data, this data allows individuals with an impact on school programs to develop programs or make any necessary adjustments. School boards, government heads, and even teachers can use this data to start initiatives or remodel already-existing plans. For example, an increased percentage of FRL might indicate an increase of lower-income families. For accuracy, data here should be compared with poverty data.

Table 30. White Pine School District Free and Reduced Lunch Eligible Students, 2011 to 2021 Selected Accountability Years

Accountability Year	White Pine FRL Eligible	Nevada FRL Eligible
2010-2011	32.6%	47.9%
2012-2013	35.7%	49.9%
2014-2015	31.9%	53.2%
2016-2017	36.5%	60.7%
2018-2019	49.3%	61.2%
2020-2021	74.6%	73.2%

Source: NevadaReportCard.com

Figure 30. White Pine vs State Comparison, School District Free and Reduced Lunch Eligibility, 2010 to 2021 Accountability Years, Index 2010 = 100

Table 31. White Pine School District Percent of Eligible Students who Received Free and Reduced Lunch, 2016 to 2021 Accountability Years

Accountability Year	White Pine FRL Receiving	Nevada FRL Receiving
2015-2016	22.4%	31.9%
2016-2017	26.6%	46.5%
2017-2018	15.0%	44.0%
2018-2019	19.2%	25.1%
2019-2020	26.3%	54.5%
2020-2021	74.6%	73.2%

Source: NevadaReportCard.com

Note: This table shows the percentage of students who receive free or reduced lunch after eligibility is approved.

Figure 31. White Pine vs State Comparison, School District Free and Reduced Lunch Receiving Students, 2016 to 2021

### County Breakdown

In White Pine County more and more students are becoming eligible for free and reduced lunch. Going from 32.6% in 2010 all the way to 74.6% in 2021 is a big change. The same pattern can be seen on the state level. Every year for Nevada more students became eligible for FRL, going from 47.9% in 2010 to 73.2% in 2021.

However, those who actually receive the free and reduced lunch are always usually less than those eligible. That is exactly what can be seen here throughout the year, about 20% who are eligible do not receive the FRL for both White Pine and Nevada. That was until the 2020-2021 school year when all those students eligible for FRL, received the FRL for both county and state.

## School District Staffing

Table 32. White Pine School District Staffing, 2012 to 2021  
Accountability Years

Accountability Year	Administrators	Teachers	Other Staff
2011-2012	11	101	57
2012-2013	23	108	59
2013-2014	9	88	94
2014-2015	10	89	85
2015-2016	9	86	95
2016-2017	8	80	78
2017-2018	7	76	74
2018-2019	9	75	92
2019-2020	9	67	80
2020-2021	7	76	85

Figure 32. White Pine School District Staffing, 2012 to 2021  
Accountability Years

### Definition

School District staffing is the number of administrators, teachers, and other staff in the entire school district.

### Why is it important?

Staffing data allows school administration and decision makers to make necessary adjustments with regards to education and allotment. When compared with student teacher ratios, class sizes, per pupil expenditures, and overall budgets, this data helps highlight patterns that make it easier to decide what is best for education planning.

### County Breakdown

There is a clear gradual decline of the school district staffing in White Pine from the years 2011 to 2021. There was fluctuation up and down throughout the years but nothing significant to turn the tide. Administrators have gone from 11 to seven and total teachers decreased from 101 to only 76. Despite the decreases in admins and teachers, other school staff has actually increased from 57 in 2011 to 85 in 2021.

## Student Teacher Ratios

### Definition

Student Teacher Ratio is the ratio of students per one teacher. Kindergarten ratios are based on number of classes, not teachers. Student Teacher ratios are calculated for primary education schools (elementary schools). 6th grade classes at middle-schools are not used in these calculations.

### Why is it important?

Student teacher ratio data helps counties adjust amount of teachers, amount of classrooms, and allotment of students per teacher. Data here should be compared with population and employee inflow/outflow in order to strengthen the need or lack of adjustment. For example, if it is expected that a huge group of workers are going to migrate into the community for a momentary project or permanent place of work, then it will be necessary to see how their children, if applicable, will be integrated into the school system. If, on the contrary, the data shows a gradual decrease in population, then a look at the student teacher ratios might suggest a lowering of teacher employees.

Figure 33. White Pine vs State Comparison, Student Teacher Ratio, 2010 to 2021 Accountability Years

### County Breakdown

The student teacher ratio in White Pine has decreased overall between the 11 years from 2010-2021. Before decreasing the student teacher ratio rose from 2012 to 2016. Now the ratio is at 15/1, this great for the county. Smaller class sizes allow the students to focus more and provides the teacher the opportunity for more time with each student. The same decrease can be seen on the state level, just at a larger scale due to Nevada having a larger population.

Table 33 White Pine Student Teacher Ratio, 2011 to 2021 Selected Accountability Years

Accountability Year	White Pine								Nevada							
	All	K	1 <sup>st</sup>	2 <sup>nd</sup>	3 <sup>rd</sup>	4 <sup>th</sup>	5 <sup>th</sup>	6 <sup>th</sup>	All	K	1 <sup>st</sup>	2 <sup>nd</sup>	3 <sup>rd</sup>	4 <sup>th</sup>	5 <sup>th</sup>	6 <sup>th</sup>

2020-2021	15	12	17	15	15	15	18	0	19	-	19	19	21	25	26	23

Source: NevadaReportCard.com

The table shows the number of students per one teacher on average. Kindergarten ratios based on number of classes, not teachers.

Student Teacher ratios are calculated for primary education schools (elementary schools.) 6<sup>th</sup> grade classes at middle-schools are not used in this calculation.

## Average Class Size

### Definition

Class sizes measure the average number of students per classroom session for primary (middle and high) school classes.

### Why is it important?

Class size data allows school boards and teachers to maximize efficiency. Instead of having too many or too few students, the ideal class size is a balance. Trends and yearly measures should be compared to the state level, but rural vs. urban factors should also be considered.

### County Breakdown

The average class size in White Pine County is about 16 for each subject, which is right on par with the student teacher ratio. Class sizes shot up into the 20's between 2016-2019, they then dropped back to where they have been hovering at from 2010 to 2021. White Pine's average class size is smaller compared to Nevada's, which is close to 23 for each class. This is to be suspected as White Pine is much smaller compared to Nevada.

Figure 34. White Pine vs State Comparison, Average Class Size, 2010 to 2021 Accountability Years

Table 34. White Pine Average Class Size by Subject Area, 2011 to 2021 Selected Accountability Years

Accountability Year	White Pine				Nevada			
	English	Math	Science	Social Studies	English	Math	Science	Social Studies
2010-2011	18	14	18	16	23	23	25	25
2012-2013	19	14	18	19	24	24	26	26
2014-2015	16	14	16	16	22	23	25	25
2016-2017	21	20	18	22	28	27	27	28
2018-2019	28	28	23	29	19	20	21	18
2020-2021	16	17	16	16	22	24	25	23

Source: NevadaReportCard.com

Class size is calculated for secondary education schools (middle- and high-schools.)

## Graduation

### Definition

The Graduation rate the rate at which 9th graders graduate by the end of the 12th grade (i.e., the number of students who graduate in four years with a regular high school diploma divided by the number of students who form the adjusted cohort for the graduating class).

### Why is it important?

Graduation rate data is a key measure of success used across the state and nation. Graduation rate data shows the effectiveness of the county's school system, as well as the ability of its students to enter the work force or continue on to higher education. Graduation rate data should also be supplemented with overall education attainment and unemployment rate. Further research can include examining the school's graduation procedure and requirements to determine whether differences exist between schools and counties.

### County Breakdown

White Pine's graduation rate has overall increased from 77% in 2015 to 83.8% in 2021. This is great for the county as their producing more graduates. However, it was not a steady incline over the six years. The graduation rate in White Pine first started to decrease, all the way down to 66.9% in 2019, before jumping up to 82.9% in 2020. Hopefully the county doesn't hit a slump again and can continue to increase their graduates.

White Pine's 83.8% graduation rate is higher than Nevada's 81.3%. Although Nevada's rate is lower, it has improved from the low 71.3% in 2015. Raising the graduation rate a full 10% in six years is a good sign for Nevada's education system.

Figure 35 White Pine vs State Comparison, Cohort Graduation Rates, 2016 to 2022 Accountability Years

Table 35. White Pine Graduation, 2016 to 2022 Accountability Years

Accountability Year	Graduating Class of	Total Students	White Pine Total Graduates	Graduation Rate	Nevada Graduation Rate
2015-2016	2014-2015	113	87	77	71.3
2016-2017	2015-2016	89	74	83.1	73.6
2017-2018	2016-2017	133	93	69.9	80.9
2018-2019	2017-2018	163	109	66.9	83.2
2019-2020	2018-2019	154	103	66.9	84.1
2020-2021	2019-2020	111	92	82.9	82.6
2021-2022	2020-2021	117	98	83.8	81.3

Source: NevadaReportCard.com

The accountability year refers to the preceding year's graduation class.

The symbol '-' indicates data not presented for groups less than ten, suppressed due to FERPA regulations.

Due to summation of FERPA regulated groups, all numbers may not add up.

\*Graduation rate is reported as a 'Cohort Graduation Rate'. Please see the glossary in Appendix A for definition.

## Per Pupil Expenditures

### Definition

Per pupil expenditures is the average amount of money spent on each student in the school district annually.

### Why is it important?

Per pupil expenditure data better allows administrators and decision makers to conclude whether a certain dollar amount is being well-spent. A high per pupil expenditure paired with a high graduation rate is a likely indicator for well-planned government spending. Along the same lines, a high per pupil expenditure rate for a county compared to the state as a whole is a good indicator only if other factors such as class size and, again, graduation rate, are up to par. The divisions of instruction, support, operations, and leadership help identify strengths and weaknesses of said components. For accuracy, this data should be paired with graduation rate and class sizes.

Figure 36 White Pine vs State Comparison, Per Pupil Total Expenditures, 2010 to 2019 Accountability Years

Figure 37 White Pine Per Pupil Expenditures, 2010 to 2019 Accountability Years, Index 2010 = 100

### County Breakdown

Per Pupil Expenditures for White Pine County are higher than the states as a whole for all the years that we have data collected in the time period from 2010- 2019. White Pine continues to increase their expenditures in every category, every year. The only year any decreases can be seen is in 2012, when Instruction decreased slightly by \$300. Ever since, constant increases which is great for White Pine County and their students.

Table 36 White Pine Per Pupil Expenditures, 2011 to 2019 Selected Accountability Years

Accountability Year	White Pine					Nevada Total Expenditure
	Instruction	Support	Operations	Leadership	Total Expenditure	
2010-2011	\$6,835	\$958	\$1,849	\$739	\$10,381	\$10,020
2012-2013	\$6,575	\$1,025	\$2,270	\$1,050	\$10,919	\$9,521
2014-2015	\$6,792	\$1,140	\$2,270	\$1,108	\$11,311	\$9,608
2016-2017	\$7,069	\$1,324	\$2,371	\$1,192	\$11,954	\$9,890
2018-2019	\$7,368	\$1,652	\$2,418	\$1,211	\$12,649	\$9,573

# Economic Characteristics

This section includes measures of household and family income, unemployment, labor force, total jobs, per capita income, and personal income totals.

This section also goes into detail on the jobs and earnings by the two-digit NAICS codes (for industry) and SOC codes (for occupations.)

Signs of economic wellbeing, employment and unemployment, inflow and outflow, income trends, county business output, and underprivileged instances, are all key in mapping out programs, reshaping business models, or, for individuals, even developing a career path.

## Economic Characteristics

Data in this section is sourced from:

- Economic Modeling Specialists International
- Nevada Department of Employment, Training, and Rehabilitation
- US Bureau of Economic Analysis
- US Census Bureau
  - American Community Survey

### This Section Contains:

Household Income .....	35
Family Income .....	36
Unemployment.....	37
Labor Force.....	38
Total Jobs.....	39
Jobs by Industry .....	40
Average Earnings per Worker by Industry .....	41
Jobs by Occupation .....	42
Average Earnings per Worker by Occupation .....	43
Commuting Inflow and Outflow.....	44
Per Capita Income.....	45
Personal Income.....	46
Personal Income Earnings Breakdown .....	47
Gross Regional Product .....	48

## County Breakdown

**Household and Family Income:** White Pine's household mean income has been increasing over the ten years. It has gone up from \$66,204 in 2010 to \$72,482 in 2020. The median income has fluctuated up and down over the ten years, but ultimately stayed around \$60,000.

**Unemployment and Labor Force:** White Pine's unemployment rate had been decreasing consistently since 2010. It got as low as 3.0% in 2019 until 2020 it rose to 4.2%. The White Pine County Labor Force saw its biggest increase in 2011, reaching 5,099 total people in the labor force. However, ever year after there was a decrease in the force bringing the total in 2020 just above the total in 2010.

**Industry:** Excluding the unclassified industries, only 7 of the twenty industries in White Pine increased in jobs from 2010-2020, while the other 13 all decreased in jobs. The largest increase comes from Mining, Quarry, Oil/Gas Extraction industry, it went from 824 jobs in 2010 to 1,368 in 2020. The largest decrease is seen in the Government, Public Admin industry, which lost over 250 jobs in the ten-year span.

**Occupation:** Jobs by occupation in White Pine County have mostly decreased from 2014 to 2020. There were certain occupations where a sizeable increase in jobs can be seen. For example, Construction and Extraction experienced a growth of 200 jobs during the 6-year span. Also, Healthcare Support had a growth by almost 50%, likely due to the high demand for healthcare workers during the pandemic.

**Commuter Inflow/Outflow:** Inbound commuters have reduced from 628 in 2010 to 471 in 2021 and outbound commuters went from 418 to 362 in the same 11-year span.

**Per Capita and Personal Income:** The per-capita income in White Pine County has risen from \$26,079 in 2010 to \$28,381 in 2020. From 2010 to 2020, White Pine's personal income has increased by a little over \$30,000. The biggest increase can be seen in the personal current transfer receipts, only two of the personal income components experienced a decrease. Those changes came from adjustment for residence and net earnings by place of residence.

**Gross Regional Product:** The industry with the highest GRP for White Pine County in 2021 is Mining, Quarrying, Oil/Gas Extraction (\$649M). The only industry that has a GRP less than \$1M is Educational Services. The total GRP for White Pine is \$1.02B. The total exports are \$1.9B and the imports are \$1.2B which makes for a very healthy and thriving economy.

## Household Income

### Definition

Household Income is measured by the combined income of everyone who lives in the residence.

### Why is it important?

Household income informs the decision maker of employment status, livelihood, and occupancy of residents in the area. Assistance programs rely on household data for distribution of funds. When utilized with GIS mapping technology, household data allows interested parties to identify segments of the community and proceed with planning businesses or government projects. This data should be cross-referenced with jobs by industry and occupation to provide further knowledge on the typical community individual.

### County Breakdown

White Pine's household mean income has been increasing over the ten years. It has gone up from \$66,204 in 2010 to \$72,482 in 2020. The median income has fluctuated up and down over the ten years, but ultimately stayed around \$60,000. The household income distribution in White Pine is spread evenly, with only one group over 20% which are those individuals making \$50,000-\$74,999.

The average household mean income for Nevada displays something different however. The mean displays a curving action, dropping \$10,000 before reaching a low in 2014. Then climbing back up to the previous \$87,000 reported in 2010. Nevada's median income displays the same trend, however it has not yet reached the \$67,000 recorded from 2010.

Table 37. White Pine Median and Mean Household Income, 2010 to 2020

Year	White Pine Median	White Pine Mean	Nevada Median	Nevada Mean
2010	\$58,571	\$66,204	\$67,235	\$87,006
2012	\$53,723	\$66,038	\$62,477	\$81,760
2014	\$62,133	\$79,258	\$58,616	\$77,868
2016	\$64,508	\$77,173	\$58,893	\$78,593
2018	\$67,183	\$76,177	\$61,429	\$82,462
2020	\$59,576	\$72,482	\$64,448	\$87,619

## Family Income

### Definition

The sum of the income of all family members 15 years and older living in the household. Families are groups of two or more people (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such people (including related subfamily members) are considered as members of one family.

### Why is it important?

Family data can help determine needs for children and lower income families in general. This can include support at school in the form of paid or assisted lunch. It can also include grants to underprivileged individuals.

### County Breakdown

Both the White Pine median and mean family income show the same pattern. Both the mean and median family income increased until 2014 hitting their peak. After 2014, both numbers started to decrease.

The Nevada median and mean family income have the opposite pattern of White Pine. At first the income in Nevada started to decrease until 2016. Since then, the numbers have been steadily rising back up.

Table 39. White Pine Median/Mean Family Income, 2010 to 2020

Year	White Pine Median	White Pine Mean	Nevada Median	Nevada Mean
2010	\$75,947	\$79,179	\$77,723	\$97,596
2012	\$66,124	\$78,939	\$72,534	\$91,881
2014	\$78,486	\$91,575	\$68,582	\$87,917
2016	\$75,602	\$85,371	\$69,357	\$89,482
2018	\$77,341	\$86,940	\$73,270	\$94,682
2020	\$73,838	\$83,243	\$76,948	\$100,273

Source: US Census Bureau/American Community Survey. "DP03: Selected Economic Characteristics" Multiple years: 2006-2010 through 2016-2020 American Community Surveys. Median and mean income are shown in 2021 dollars.

## Unemployment

### Definition

The unemployment rate represents the number of unemployed people as a percentage of the civilian labor force. All civilians 16 years old and over are classified as unemployed if they (1) were neither "at work" nor "with a job but not at work" during the reference week, and (2) were actively looking for work during the last 4 weeks, and (3) were available to accept a job. Also included as unemployed are civilians who did not work at all during the reference week, were waiting to be called back to a job from which they had been laid off and were available for work except for temporary illness.

### Why is it important?

It is a clear indicator of the health of an economy. A high unemployment rate is usually a sign of a weaker economy with a lack of business and development that would otherwise support its citizens. At the same time, a high unemployment rate does *not* indicate a lack of participating individuals, because only those who are actively seeking employment are measured. For a further explanation on labor force impacts, see the next page. A low unemployment rate indicates the flow of money, the exchange of goods, and general growth and prosperity. It is important to emphasize general trends rather than spikes.

Table 41. White Pine Unemployment, 2010 to 2020

Year	White Pine Unemployment	Nevada Unemployment
2010	9.2%	13.5%
2011	8.7%	13.0%
2012	7.7%	11.2%
2013	7.3%	9.6%
2014	6.0%	7.9%
2015	5.3%	6.8%
2016	4.6%	5.7%
2017	4.0%	5.1%
2018	3.7%	4.6%
2019	3.0%	3.9%
2020	4.2%	12.8%

Source: Nevada Department of Employment, Training and Rehabilitation (DETR)

### County Breakdown

White Pine's unemployment rate had been decreasing consistently since 2010. It got as low as 3.0% in 2019 until 2020 it rose to 4.2%. This can also be seen on the state level, just at much larger scale. Unemployment in Nevada got all the way down to 3.9% in 2019, then shot up to 12.8% in 2020. Both big jumps in unemployment for White Pine and Nevada can be contributed to the pandemic, that forced many people to go on lockdown and stay home.

Figure 40. White Pine vs State Comparison, Unemployment Rate, 2010 to 2020

## Labor Force

### Definition

The labor force represents the proportion of those who are in employment or seeking employment (unemployed). It does not factor in people who are not seeking employment.

### Why is it important?

The labor force is an indicator for economic activity or lethargy. For income, individuals who are not participating in the labor force might live with family, live off savings, or engage in social welfare programs. Thus, a labor force participation rate is key in identifying the relationship between people and the money that flows in the county. A low labor force participation rate might also indicate a higher retirement community.

### County Breakdown

The White Pine County Labor Force saw its biggest increase in 2011, reaching 5,099 total people in the labor force. However, ever year after there was a decrease in the force bringing the total in 2020 just above the total in 2010.

Nevada's labor force saw a sizeable growth from 2010-2020. Seemingly increasing more and more every year Nevada's labor force has grown by 200,000, the only year Nevada's labor force decreased was 2020. However, this can be contributed to the pandemic which caused many to lose their jobs.

Table 42. White Pine Labor Force, 2010 to 2020

Year	White Pine Labor Force	Nevada Labor Force	White Pine Annual Change	Nevada Annual Change
2010	4,563	1,358,580

## Total Jobs

### Definition

A job is any position in which a worker provides labor in exchange for monetary compensation. This includes those who work as employees for businesses (a.k.a. “wage and salary” employees) and proprietors who work for themselves.

Total jobs refer to the number of jobs located in the county.

### Why is it important?

Jobs act as an economic baseline indicator for the activity in a community. Jobs indicate money for the individuals and also money for the community, assuming employed individuals are living in the county and there are establishments in the county where they can spend their money. While total jobs is a necessary reference point, jobs by industry, jobs by occupation, average earnings, and employment inflow/outflow should all be consulted in order to get an accurate picture for any type of development or future projects.

### County Breakdown

The total jobs in White Pine County have fluctuated up and down from 2010 to 2021. Total jobs reached a peak in 2011 with 4,692 jobs. After 2011, jobs seem to slowly decline nearly reaching the original 4,301 jobs reported from 2010. Following a low in 2016, jobs began to gradually rise back, and they don't appear to be stopping anytime soon.

Figure 42. White Pine Total Jobs, 2010 to 2021

Table 43 White Pine Total Jobs, 2010 to 2021

Year	White Pine Total Jobs	Nevada Total Jobs
2010	4,301	1,228,521
2011	4,692	1,233,316
2012	4,663	1,255,940

## Jobs by Industry

Figure 44 White Pine Total Jobs by Industry by Major Industry Type, 2010 to 2021. Index: 2010 = 100

### Definition

An industry is a group of businesses that produce a product or provide a service. Listed here is the total amount of county jobs in each industry.

### Why is it important?

Jobs by industry data indicates sector trends that help give a visual to the type of community or county, and how employees and businesses can adjust.

### County Breakdown

Excluding the unclassified industries, only 7 of the twenty industries in White Pine increased in jobs from 2010-2020, while the other 13 all decreased in jobs. The largest increase comes from Mining, Quarry, Oil/Gas Extraction industry, it went from 824 jobs in 2010 to 1,368 in 2020. The largest decrease is seen in the Government, Public Admin industry, which lost over 250 jobs in the ten-year span.

The state of Nevada displays a different, more promising future. Nevada saw sizeable increases in every industry, while all but only two decreased.

## Average Earnings per Worker by Industry

### Definition

Earnings includes wage or salary income, net income (gross receipts minus expenses) from nonfarm and farm self-employment, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses. Earnings represent the amount of income received regularly before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc. These earnings are reported per worker by industry, as compared to per worker by occupation.

### Why is it important?

Average Earnings by Industry data is useful for employers and employees gauging the landscape and looking for shifts in the industry that might affect how they proceed with their business or career. Employers can shape their business models around the earnings numbers, while employees can use the numbers as a baseline or leverage point. Furthermore, decision makers get a better sense of which subsectors are getting paid more or less than the industry average. An increase in average earnings signals a demand. A consistent increase in average earnings signals an even stronger demand, one that has perhaps not yet been met.

### County Breakdown

Average earnings per worker in White Pine County has increased from 2010-2021, by about \$10,000. This is a great sign for White Pine and its economy. An increase can be seen being made every year from 2010 up until 2021 where the only decrease can be seen. This change in the pattern is likely caused by the pandemic, setting many back financially. However, the decrease was slight at \$3,000 and the average earnings per worker in 2021 are much higher than before.

Figure 45. White Pine Average Earnings per Worker by Major Industry Type, 2010 to 2021, Index 2010 = 100

## Jobs by Occupation

Figure 46 White Pine Total Jobs by Occupation by Major Occupation Type, 2014 to 2020. Index: 2014 = 100

### Definition

An occupation describes the kind of work the person does on the job. For those who worked at two or more jobs, the data refers to the job which the person worked the most hours.

### Why is it important?

Jobs by occupation data outlines job availability, need, and demand. This data indicates sector trends that then suggest general wellbeing. Occupation data shows employees the accessibility, and businesses the best way to fit employment plans into their business models.

### County Breakdown

Jobs by occupation in White Pine County have mostly decreased from 2014 to 2020. There were certain occupations where a sizeable increase in jobs can be seen. Construction and Extraction experienced a growth of 200 jobs during the 6-year span. Healthcare Support had a growth by almost 50%.

## Average Earnings per Worker by Occupation

### County Breakdown

In White Pine County, the top three occupations by average earnings per worker are Legal (\$52.28 per hour), Management (\$42.19 per hour), followed by Healthcare Practitioners Tech (\$40.29 per hour). These top three earning occupations are the same top earners for Nevada, however White Pine's average per hour is slightly less than Nevada's in those occupations. Despite Nevada earning a higher average in these three occupations, White Pine County still has a higher average earning through all occupations at \$25.20.

For those occupations where data was suppressed, '-' shows instead of a specific amount.

### Definition

Earnings includes wage or salary income (in the case of occupation, wages), net income (gross receipts minus expenses) from nonfarm and farm self-employment, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses. Earnings represent the amount of income received regularly before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc. These earnings are reported per worker by occupation, as compared to per worker by industry.

### Why is it important?

Average Earnings by Occupation data is useful for employers and employees gauging the landscape and looking for shifts in the industry that might affect how they proceed with their business or career. Employers can shape their business models around the earnings numbers, and employees can use the numbers as a reference or leverage point.

## Commuting Inflow and Outflow

### Definition

Employee Inflow/Outflow compares where individuals live and where individuals work in relation to the county. This page measures the Inflow (those people living in another county but working in this one) and Outflow (those living in this county but working in another.) Net commuters shows the difference between inbound and outbound. This data shows average daily commuters.

Table 49. White Pine Commuter Inflow and Outflow, 2010 to 2021

Year	Inbound Commuters	Outbound Commuters	Net Commuters
2010	628	418	210
2011	784	498	287
2012	591	469	122
2013	646	1,016	-370
2014	618	566	52
2015	441	334	107
2016	462	378	83
2017	467	450	17
2018	471	352	119
2019	465	359	105
2020	459	353	105
2021	471	362	108

Source: Emsi Burning Glass 2022.1

### Why is it important?

Employment Inflow/Outflow data helps visualize how new jobs, projects, and influxes of people are going to impact the community. For example, if a large construction project plans to bring a thousand employees into the county for a two-year period, inflow/outflow data enables decision makers to know how the surrounding area is going to be affected. The data reported in this section outlines the trend pattern, while other economic data in the report is used in conjunction to make necessary adjustments.

### County Breakdown

The total commuters in White Pine County have changed from 2010 to 2020. Inbound commuters have reduced from 628 in 2010 to 471 in 2021 and outbound commuters went from 418 to 362 in the same 11-year span. Although, total net commuters have decreased over the years it does not necessarily mean it is a good or bad thing. Fluctuation can be seen in the inbound and outbound commuters. In 2013 there was a staggering 1,016 outbound commuters (White Pine residents working outside the county) and 646 inbound commuters (people working in the county who live elsewhere), years after it started to balance out. However, this shows White Pine can handle high influxes in commuters, There are more inbound than outbound commuters, which is good sign that White Pine continues to provide jobs to many.

Figure 48. White Pine Employment Inflow and Outflow, 2010 to 2021. Index: 2010 = 100

## Per Capita Income

### Definition

Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a region by the total population.

### Why is it important?

Per capita income data represents a community's economic stability and quality of living. A higher per capita income means a higher purchasing power. Consequently, a higher purchasing power means more room for economic growth and expansion. Increased per capita income is roughly a sign of increased wealth. Certain analysts conclude that per capita income is only valid when there is a low amount of wealthy citizens in the community, on the account of outliers distorting the data. Therefore, in order to be as accurate as possible, one should consult household income and family income in conjunction with per capita income.

Table 50. White Pine Per Capita Income, 2010 to 2020

Year	White Pine Per Capita Income	Nevada Per Capita Income
2010	\$26,079	\$33,287
2012	\$26,340	\$31,194
2014	\$29,033	\$29,771
2016	\$26,827	\$30,229
2018	\$28,169	\$31,954
2020	\$28,381	\$33,894

Source: US Census Bureau/American Community Survey. "DP03: Selected Economic Characteristics" Multiple years: 2006-2010 through 2016-2020 American Community Surveys. Per Capita Income is shown in 2021 dollars.

Figure 49. White Pine vs State Comparison, Per Capita Income, 2010 to 2020

### County Breakdown

The per-capita income in White Pine County has risen from \$26,079 in 2010 to \$28,381 in 2020. Although the overall per capita income has increased in White Pine, it has not been a consistent rise. There is more of a wavy pattern that can be seen in White Pine County. The per capita income rose up to a peak \$29,033 in 2014, then fell back down to \$26,000 in 2016 and then rose up to \$28,169 in 2018. Nevada's per capita income shows an arching pattern. It starts high in 2010 then hit a low \$29,771 in 2014 before climbing back up to the initial \$33,000.

Figure 50. White Pine vs State Comparison, Per Capita Income, 2010 to 2020, Index 2010 = 100

## Personal Income

### Definition

Income received by individuals from all sources. It includes income received from participation in production as well as from government and business transfer payments. For subdivision definitions, please see Appendix A: Glossary.

### Why is it important?

Personal income data shows quality of living alongside signs of economic prosperity. When compared with metrics like poverty, housing, and personal income from other counties and states, personal income can be used to better assess levels of distribution. While the upmost level measure of personal income can be used to know the year-to-year trends of increased or decreased overall cash flow, the metrics to note are the subdivisions. An increase in earnings by place of work might mean job satisfaction or economic fulfillment. Since changes are accounted for inflation, increases in government social insurance contribution could mean social reform or a higher involvement on the part of employers instituting employee payment plans.

Table 51. White Pine Personal Income, 2010 and 2020

	2010	2020
<b>Personal Income*</b>	\$467,192	\$498,061
<b>Earnings by place of work*</b>	\$364,401	\$392,639
<b>Contributions for gov't social insurance*</b>	\$27,995	\$36,871
<b>Employee/self-employed contributions*</b>	\$15,931	\$20,269
<b>Employer contributions*</b>	\$12,064	\$16,601
<b>Adjustment for residence*</b>	-\$17,919	-\$48,743
<b>Net earnings by place of residence</b>	\$318,486	\$307,026
<b>Dividends, interest, and rent*</b>	\$61,778	\$61,845
<b>Personal current transfer receipts*</b>	\$86,927	\$129,189

Source: U.S. Bureau of Economic Analysis, "Personal Income and Employment by Major Component (CA4)" (accessed February 2022)

\*All data is shown in thousands of 2021 dollars.

### County Breakdown

From 2010 to 2020, White Pine's personal income has increased by a little over \$30,000. The biggest increase can be seen in the personal current transfer receipts, only two of the personal income components experienced a decrease. Those changes came from adjustment for residence and net earnings by place of residence.

Figure 51. White Pine Personal Income, 2010 to 2020. Index: 2010 = 100

## Personal Income – Earnings Breakdown

### Definition

Earnings are the remuneration (pay, wages) of a worker or group of workers for services performed during a specific period of time. Earnings breakdown data is a specific branch of income data that looks at how earnings are paid through place of employment. For subdivision definitions, please see Appendix A: Glossary.

### Why is it important?

Earnings breakdown data can be used to identify the different parts of payments through places of employment. This data is useful for identifying possible mandates, reforms, and overall increases or decreases in benefits such employer contributions. An outlook on the overall economic wellbeing of the community can be formed when using this data in conjunction with job and personal income data.

### County Breakdown

Earnings by place of work in White Pine has increased by about \$30,000 from 2010 to 2020. Wages and salaries experienced the biggest increase however by \$60,000. Despite the two large increases there was conversely two large decreases. The first coming from proprietors' income losing nearly \$40,000, then nonfarm proprietors changing by nearly \$60,000.

Figure 52. White Pine Personal Income, 2010 to 2020. Index: 2010 = 100

## Gross Regional Product

### Definition

Gross Regional Product (GRP) is the market value of goods and services produced by labor and property in the region, regardless of nationality. Imports show the amount of money that is spent by all industries located in the region in exchange for goods or services produced by an industry located outside the region. Exports show the amount of money that is spent by industries located outside the region in exchange for goods or services produced by an industry located in the region.

Table 53. White Pine GRP by Industry, 2021

NAICS	2021
<b>11: Agriculture, Forestry, Fishing, Hunting</b>	\$19,151,421
<b>21: Mining, Quarrying, Oil/Gas Extraction</b>	\$649,069,877

For those industries where data was suppressed, '-' shows instead of a dollar amount.

Data is shown in 2021 dollars

### County Breakdown

The industry with the highest GRP for White Pine County in 2021 is Mining, Quarrying, Oil/Gas Extraction (\$649M). The only industry that has a GRP less than \$1M is Educational Services. The total GRP for White Pine is \$1.02B. The total exports are \$1.9B and the imports are \$1.2B which makes for a very healthy and thriving economy.

Table 54. White Pine Total GRP, Exports, and Imports, 2021

	White Pine
<b>Total GRP</b>	\$1,028,601,913
<b>Exports</b>	\$1,994,384,285
<b>Imports</b>	\$1,272,731,716

Data is shown in 2021 dollars

### Why is it important?

Gross Regional Product is a general indicator of economic wellbeing, but the more decisive metrics here are imports and exports. These two metrics indicate room for economic growth. A goal for a county should be to sustain high exports and low imports. High exports indicate production is being done inside the county. Consequently, a lot of cash is flowing in the county and being exchanged. On the other hand, low imports indicate the county is self-sufficient. Money circulates. It stays much as possible inside the county and supports the county's individuals and businesses in terms of growth. However, it should not be an automatic red flag if imports are high. If imports are high, then that means the county is forced to bring something in from an outside source. Therefore, while money may be leaving the county, there nevertheless is room for production to be done inside the county. In short, high imports can be an indicator for expansion. This does not automatically translate for certain industries, like Information or Finance and Insurance. For a detailed look at imports and exports per industry, see the section *NAICS Sectors*.

Figure 53. White Pine Total GRP, Exports, and Imports, 2021

# NAICS Sector Breakdown

This section includes a breakdown of industry sectors with measures of jobs, businesses, earnings, sales, exports, imports, and taxes paid.

This section looks at 2018 data involving the compilation of business establishments into industries, and then the further compilation of those industries into entire workforce sectors. This is all done through the categorization of NAICS.

## NAICS Sector Breakdowns

The 'NAICS Sectors' section devotes two pages to each of the 2-digit NAICS sectors. Here is the information that you will find on each:

Page 1:

- 2-digit sector name and description
- The name and description of each 3-digit sector under that 2-digit sector.
- A brief look into the various subsectors' impact on the county

Page 2:

- Two tables showing nine different data measures (explained further on the following pages)
- Figure showing change in jobs from 2010 to 2018 in each 3-digit sector
- Figure showing a comparison of the average annual earnings per job in 2018 between the county and state for each sector

## What is NAICS?

NAICS, or North American Industry Classification System, is an *industry* classification system. Economic units (i.e. businesses) that have similar production processes are classified in the same *industry*. An industry then is an overarching term used to represent similar types of businesses.

For example, the railroad industry or the supermarket industry are comprised of all railroads and supermarkets. Then, even further lines are drawn between industries, to create entire *sectors*. Sectors are groups of similar industries piled together into the same classification. For example, the railroad industry is ultimately grouped under NAICS Sector 48: Transportation and Warehousing. The supermarket industry is ultimately grouped under NAICS Sector 44: Retail Trade.

This seems a little confusing at first, but NAICS makes it easier with their organization. The way NAICS specifically classifies these industries is through a number system. This allows for specific industries to be highlighted, or for entire sectors to be highlighted. The NAICS system divides the classifications into 2, 3, 4, 5, and 6-digit industries.

The classifications of these industries are further explained on the next page, but the column to the right should give a general layout of how NAICS helps organize industry data. These different sectors are separated in order to give emphasis to certain strengths, weaknesses, demands and overall needs of any given region.

## NAICS Sectors

### What NAICS can offer

NAICS data involves business and industry data, key metrics for business owners, employees, government officials, and other decision makers. Looking at North American Industry Classification System can give the reader a detailed overview of an industry in the format of a concise small table or figure. Over the next few pages, NAICS is detailed by defining the system and going into the various measures shown.

The twenty-five 2-digit sectors of NAICS (listed to the right and often mentioned in other sections of this report) can be further broken down into 3-, 4-, 5-, and 6- digit subsectors. This division of the sectors into their subsectors allows for a finite look at how regional business operate. While NAICS at its highest branches starts off at 2-digit sectors, most pages in this section focus on 3-digit subsectors. This lets specificity take priority, wherein we get a full picture of the individual ninety-five 3-digit subsectors. This full picture includes total sales, exports, imports, jobs, businesses, GRP, earnings, and taxes paid, as well as a snapshot comparison of the county and the state.

The next few pages seek to clarify the meaning of NAICS and its takeaways.

### Businesses within a NAICS subsector

The example *establishments*, or businesses, that fall under each industry, can be any number of establishments or businesses in that given county that provide that industry's service. For example, for Industry 5112: Software Publishers, there could be zero businesses in that county, or 25, or 100, or, again, any number of businesses. These are businesses grouped together based on their services provided, and they fall under the relevant 4-digit industry. To stick to our example of Software Publishers, this could include businesses such as "Printer Software Brothers" or "Laser Ink Program Hub." Both of these businesses, if they fall under the description of software publishers, belong to the 5112 subsector.

The next page goes into further detail regarding the breakdown of 2-digit NAICS sectors into smaller, easier to digest, subsectors.

### This Section Contains:

Sector 11: Agriculture, Forestry, Fishing, and Hunting.....	54
Sector 21: Mining, Quarrying, and Oil and Gas Extraction .....	56
Sector 22: Utilities .....	58
Sector 23: Construction .....	60
Sector 31: Manufacturing .....	62
Sector 32: Manufacturing .....	64
Sector 33: Manufacturing .....	66
Sector 42: Wholesale Trade.....	68
Sector 44: Retail Trade .....	70
Sector 45: Retail Trade .....	72

Sector 99: Unclassified.....	102

### Breaking Down NAICS Sectors

There are 21 2-digit NAICS sectors. A full list of these is seen on the previous page, but let us list a couple here to see how this process works:

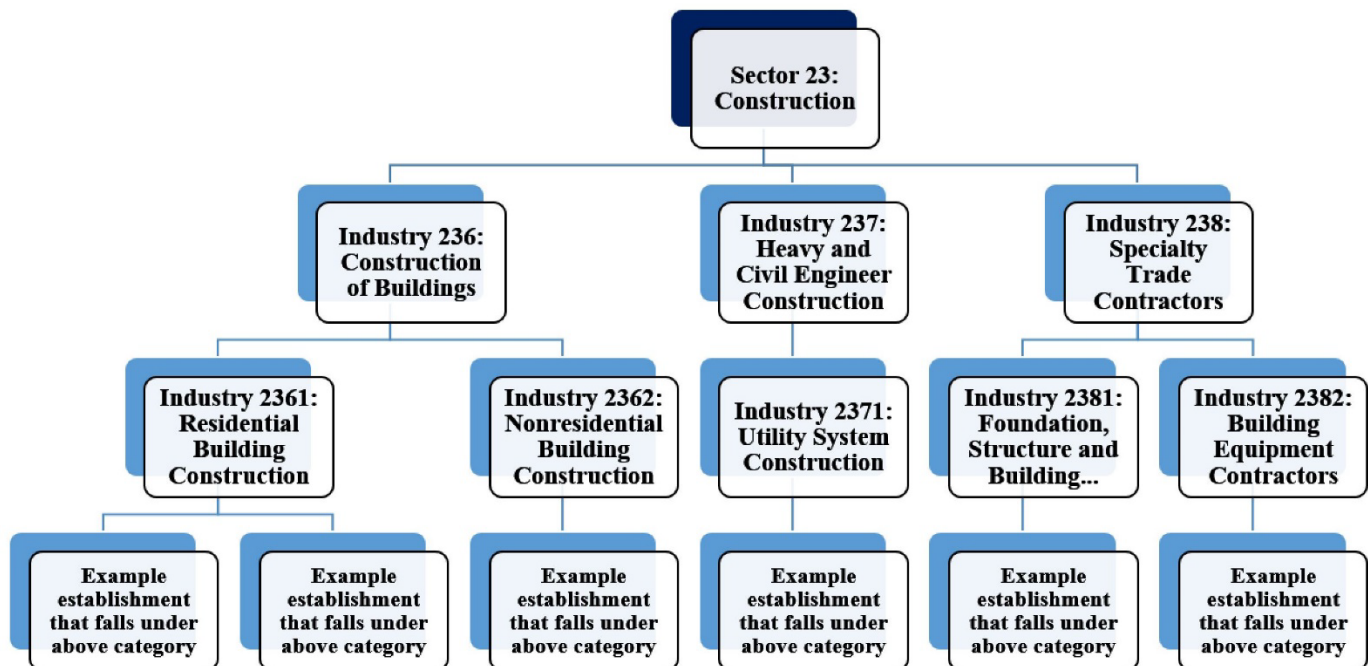

- NAICS Sector 11: Agriculture, Forestry, Fishing, and Hunting
- NAICS Sector 21: Mining, Quarrying, and Oil and Gas Extraction
- NAICS Sector 22: Utilities

Each of these 2-digit NAICS sectors is then divided into a number of 3-digit NAICS sectors. Those 3-digit NAICS sectors are then divided into 4-digit NAICS sectors, for specificity purposes. These classifications keep going and going until they are divided into 6-digit NAICS sectors, but for the purposes of this section of the report, we will be using and analyzing 3-digit NAICS sectors. The reason for this is that 3-digit NAICS sectors are the right mix for being specific and broad.

Table 55. White Pine 3-Digit NAICS Top 15 Performers, Jobs, 2021

Rank	NAICS	Jobs
1	212: Mining (except Oil and Gas)	1,277
2	903: Local Government	651
3	902: State Government	407

Note: To save space, not all 4-digit subsectors, nor any of the 5- or 6-digit subsectors, for the Construction sector are being shown here.

### Top Performers

In this intro section, you will find a variety of '3-Digit NAICS Top 15 Performers'. These are ranked lists of the top 15 3-digit subsectors in handpicked categories. Please see the below list for the available rankings:

Total Jobs .....	51
Average Earnings per Job .....	52
Total Sales .....	52
Imports .....	53
Exports .....	53

The Sourcing for each of these tables is as follows:  
*Source: Emsi Burning Glass 2022.1*

### The NAICS Classification System

Let us take a step back to make sure we understand the classification system. For example, if we look at NAICS Sector 23: Construction, which is comprised of three 3-digit industries. **Note:** *These industries may also be defined as subsectors*, because they fall under the *sector* of Construction. These 3-digit industries, or 3-digit subsectors, fall under the notion of Construction, but are more specific. They are Industry 236: Construction of Buildings, Industry 237: Heavy and Civil Engineer Construction, and Industry 238: Specialty Trade Contractors. You can already see how each classification gets more specific. Even further, within each of *these* 3-digit industries, there are more specific subsectors.

NAICS Sector 23: Construction is broken down into subsectors like 2361: Residential Building Construction and 2362: Nonresidential Building Construction. As you can see, these subsectors have assigned numbers also. They are 4-digit classifications. The first two digits (23) imply that they fall underneath Sector 23.

The NAICS official handbook further divides these 4-digit sectors into 5- and 6-digit sectors when necessary. This is used to be more precise. This report however only examines 2-digit sectors and the 3-digit subsectors that make up those sectors.

Table 56 White Pine 3-Digit NAICS Top 15 Performers, Average Earnings per Job, 2021

Rank	NAICS	Average Earnings per Job
1	221: Utilities	\$141,879
2	212: Mining (except Oil and Gas)	\$116,163
3	902: State Government	\$99,558
4	423: Merchant Wholesalers, Durable Goods	\$92,161
5	237: Heavy and Civil Engineering Construction	\$89,116
6	901: Federal Government	\$88,745
7	903: Local Government	\$83,118
8	213: Support Activities for Mining	\$77,470
9	484: Truck Transportation	\$72,735
10	111: Crop Production	\$67,283
11	541: Professional, Scientific, and Technical Services	\$64,577
12	492: Couriers and Messengers	\$60,573
13	238: Specialty Trade Contractors	\$60,206
14	522: Credit Intermediation and Related Activities	\$58,208
15	441: Motor Vehicle and Parts Dealers	\$56,799

Table 57 White Pine 3-Digit NAICS Top 15 Performers, Total Sales, 2021

Rank	NAICS	Total Sales
1	212: Mining (except Oil and Gas)	\$1,055,496,044
2	902: State Government	\$447,371,169
3	901: Federal Government	\$266,775,413
4	903: Local Government	\$126,169,962
5	211: Oil and Gas Extraction	\$77,016,980
6	221: Utilities	\$36,618,357
7	111: Crop Production	\$30,697,878
8	721: Accommodation	\$24,390,619
9	424: Merchant Wholesalers, Nondurable Goods	\$16,078,893
10	722: Food Services and Drinking Places	\$15,939,670
11	213: Support Activities for Mining	\$15,911,727
12	112: Animal Production and Aquaculture	\$15,676,366
13	447: Gasoline Stations	\$14,830,799
14	423: Merchant Wholesalers, Durable Goods	\$14,499,602
15	238: Specialty Trade Contractors	\$13,179,193

## Data Measures

Throughout this section each 2-digit sector is summarized by analyzing its individual 3-digit industry subsectors.

The following data measures were used to determine the activity of the sectors as a whole:

- Total Jobs
- # of Payroll Businesses
- Average Earnings per Job
- Total Industry Earnings
- Total Sales
- In-Region Sales
- Exported Sales
- Imports
- Total Taxes Paid

For specific definitions of each of the data measures, please refer to Appendix A: Glossary. All of these factors are available for readers to make their own assumptions. However, for the purpose of this report, the factors that are most taken into consideration in the analyses are imports, exports, and total sales.

An *import* is a good or service brought into the county from an outside source. They are the opposite of *exports*, which are goods or services that are produced in one county and then brought or shipped to another county, state, or country for future sale or trade. Imports are perhaps the most important data measure to keep an eye out for because they indicate a possible opportunity for economic growth. In other words, since the county must bring something in from an outside source, that means there is a chance for production to be done inside the county. Instead of paying more for delivery to the county from somewhere else, the county could then produce their own goods and services.

For example, 2017 data shows Lincoln County, Nevada is relatively high in imports for Automobile Dealers, at \$1,787,000, and low in exports, at \$448,000. This means that a lot of people in Lincoln County do business with automobile dealers outside of Lincoln County, rather than inside Lincoln County. Basically: This \$1.3M gap indicates opportunity. If someone wanted to open an automobile dealership in Lincoln County, they would have reason to do so.

Table 58. White Pine 3-Digit NAICS Top 15 Performers, Total Imports, 2021

Rank	NAICS	Imports
1	901: Federal Government	\$169,282,386
2	903: Local Government	\$138,392,372
3	902: State Government	\$125,936,101
4	541: Professional, Scientific, and Technical Services	\$61,685,133
5	238: Specialty Trade Contractors	\$38,234,034

14	331: Primary Metal Manufacturing	\$6,181,876
15	444: Building Material and Garden Equipment and Supplies Dealers	\$3,836,950

## **NAICS Sector 11: Agriculture, Forestry, Fishing, and Hunting**

*The Agriculture, Forestry, Fishing and Hunting sector comprises establishments primarily engaged in growing crops, raising animals, harvesting timber, and harvesting fish and other animals from a farm, ranch, or their natural habitats.*

### **111: Crop Production:**

Industries in the Crop Production subsector grow crops mainly for food and fiber. The subsector comprises establishments, such as farms, orchards, groves, greenhouses, and nurseries, primarily engaged in growing crops, plants, vines, or trees and their seeds.

### **112: Animal Production and Aquaculture:**

Industries in the Animal Production and Aquaculture subsector raise or fatten animals for the sale of animals or animal products and/or raise aquatic plants and animals in controlled or selected aquatic environments for the sale of aquatic plants, animals, or their products. The subsector includes establishments, such as ranches, farms, and feedlots, primarily engaged in keeping, grazing, breeding, or feeding animals. These animals are kept for the products they produce or for eventual sale. The animals are generally raised in various environments, from total confinement or captivity to feeding on an open range pasture.

### **113: Forestry and Logging:**

Industries in the Forestry and Logging subsector grow and harvest timber on a long production cycle (i.e., of 10 years or more). Long production cycles use different production processes than short production cycles, which require more horticultural interventions prior to harvest, resulting in processes more similar to those found in the Crop Production subsector. Consequently, Christmas tree production and other production involving production cycles of less than 10 years, are classified in the Crop Production subsector.

### **114: Fishing, Hunting and Trapping:**

Industries in the Fishing, Hunting and Trapping subsector harvest fish and other wild animals from their natural habitats and are dependent upon a continued supply of the natural resource. The harvesting of fish is the predominant economic activity of this subsector and it usually requires specialized vessels that, by the nature of their size, configuration and equipment, are not suitable for any other type of production, such as transportation.

### **115: Support Activities for Agriculture and Forestry:**

Industries in the Support Activities for Agriculture and Forestry subsector provide support services that are an essential part of agricultural and forestry production. These support activities may be performed by the agriculture or forestry producing establishment or conducted independently as an alternative source of inputs required for the production process for a given crop, animal, or forestry industry. Establishments that primarily perform these activities independent of the agriculture or forestry producing establishment are in this subsector.

### **County Breakdown**

In this sector total jobs increased overall from 2011 to 2021, only animal production and fishing, hunting and trapping saw decreases in jobs. Despite the slight loss in jobs, there still is 8 payroll businesses with over \$11M in total industry earnings. Crop production is this industry's highest earner bringing in over \$7.8M followed by animal production with \$3.7B. The exported sales far outweigh the imports, showing strong stability in this sector.

When compared to Nevada, the average earnings per job are higher for White Pine in the area that data was able to be collected.

Total taxes collected in this sector \$1,327,376.

## **NAICS Sector 21: Mining, Quarrying, and Oil and Gas Extraction**

*The Mining, Quarrying, and Oil and Gas Extraction sector comprises establishments that extract naturally occurring mineral solids, such as coal and ores; liquid minerals, such as crude petroleum; and gases, such as natural gas. The term mining is used in the broad sense to include quarrying, well operations, beneficiating (e.g., crushing, screening, washing, and flotation), and other preparation customarily performed at the mine site, or as a part of mining activity.*

### **211: Oil and Gas Extraction**

Industries in the Oil and Gas Extraction subsector operate and/or develop oil and gas field properties. Such activities may include exploration for crude petroleum and natural gas; drilling, completing, and equipping wells; operating separators, emulsion breakers, desilting equipment, and field gathering lines for crude petroleum and natural gas; and all other activities in the preparation of oil and gas up to the point of shipment from the producing property. This subsector includes the production of crude petroleum, the mining and extraction of oil from oil shale and oil sands, the production of natural gas, sulfur recovery from natural gas, and recovery of hydrocarbon liquids.

### **212: Mining (except Oil and Gas)**

Industries in the Mining (except Oil and Gas) subsector primarily engage in mining, mine site development, and beneficiating (i.e., preparing) metallic minerals and nonmetallic minerals, including coal. The term "mining" is used in the broad sense to include ore extraction, quarrying, and beneficiating (e.g., crushing, screening, washing, sizing, concentrating, and flotation), customarily done at the mine site.

### **213: Support Activities for Mining**

Industries in the Support Activities for Mining subsector group establishments primarily providing support services, on a contract or fee basis, required for the mining and quarrying of minerals and for the extraction of oil and gas.

Establishments performing exploration (except geophysical surveying and mapping) for minerals, on a contract or fee basis, are included in this subsector. Exploration includes traditional prospecting methods, such as taking core samples and making geological observations at prospective sites.

### **County Breakdown**

This sector provides White Pine with 9 payroll businesses and 1,368 jobs. This is an increase from the previous 1,149 jobs in 2011. The most significant change comes from support activities for mining going from having less than 10 jobs to 91 in 2021. Mining (except oil and gas) is this sector's biggest earner bringing in \$148M, and despite having no payroll businesses oil and gas extraction brings in \$11M.

All three subsectors are active, bringing in sizeable amounts of money into White Pine. Mining (except oil and gas) had total sales over \$1B. The exported sales are much higher than the imports, except for support activities for mining where the imports outweigh exported sales but not total sales. However, with so much overhead coming from the other two subsectors, this sector and White Pine's economy afloat. When compared to Nevada, the average earnings per job in this sector are less in White Pine. The largest wage gap can be seen in the support activities for mining where Nevada earns about \$20,000 more per job than White Pine.

Total taxes collected in this sector \$75,155,104.

Table 62. White Pine NAICS Sector 21, 3-Digit Snapshot: Jobs and Earnings, 2021

NAICS	2011 Jobs	2021 Jobs	Payroll Businesses	Average Earnings/Job	Total Industry Earnings

## **NAICS Sector 22: Utilities**

*The Utilities sector comprises establishments engaged in the provision of the following utility services: electric power, natural gas, steam supply, water supply, and sewage removal. Within this sector, the specific activities associated with the utility services provided vary by utility: electric power includes generation, transmission, and distribution; natural gas includes distribution; steam supply includes provision and/or distribution; water supply includes treatment and distribution; and sewage removal includes collection, treatment, and disposal of waste through sewer systems and sewage treatment facilities.*

### **221: Utilities**

Industries in the Utilities subsector provide electric power, natural gas, steam supply, water supply, and sewage removal through a permanent infrastructure of lines, mains, and pipes. Establishments are grouped together based on the utility service provided and the particular system or facilities required to perform the service.

#### **County Breakdown**

The Utilities sector in White Pine has experienced some change from 2011 to 2021. There are 3 total payroll businesses with 33 jobs, this is an increase from the 23 previously reported. Jobs in this industry average \$141,879, which appears to be a great income. But when compared to Nevada, White Pine's workers are earning nearly \$30,000 less in this sector than the rest of Nevada. Despite not matching Nevada's average, White Pine's Utilities industry still brings in \$5.7M in earnings and has over \$36M in total sales.

White Pine's total sales are split with \$19.5M in region and \$17M exported sales. Imports for this sector are high at \$19.7M. This healthy balance of in-region sales, exports, and imports shows an active community, a self-sufficient community, and a reliance and relationship with outside communities.

Total taxes collected \$5,417,662.

Table 64. White Pine NAICS Sector 22, 3-Digit Snapshot: Jobs and Earnings, 2021

NAICS	2011 Jobs	2021 Jobs	Payroll Businesses	Average Earnings/Job	Total Industry Earnings

Figure 60. White Pine vs State Comparison, NAICS Sector 22, Average Earnings per Job by 3-Digit Sector, 2021

## **NAICS Sector 23: Construction**

*The Construction sector comprises establishments primarily engaged in the construction of buildings or engineering projects (e.g., highways and utility systems). Establishments primarily engaged in the preparation of sites for new construction and establishments primarily engaged in subdividing land for sale as building sites also are included in this sector.*

### **236: Construction of Buildings**

The Construction of Buildings subsector comprises establishments primarily responsible for the construction of buildings. The work performed may include new work, additions, alterations, or maintenance and repairs. The onsite assembly of precut, panelized, and prefabricated buildings and construction of temporary buildings are included in this subsector. Part or all of the production work for which the establishments in this subsector have responsibility may be subcontracted to other construction establishments--usually specialty trade contractors.

### **237: Heavy and Civil Engineering Construction**

The Heavy and Civil Engineering Construction subsector comprises establishments whose primary activity is the construction of entire engineering projects (e.g., highways and dams), and specialty trade contractors, whose primary activity is the production of a specific component for such projects. Specialty trade contractors in the Heavy and Civil Engineering Construction subsector generally are performing activities that are specific to heavy and civil engineering construction projects and are not normally performed on buildings. The work performed may include new work, additions, alterations, or maintenance and repairs.

### **238: Specialty Trade Contractors**

The Specialty Trade Contractors subsector comprises establishments whose primary activity is performing specific activities (e.g., pouring concrete, site preparation, plumbing, painting, and electrical work) involved in building construction or other activities that are similar for all types of construction, but that are not responsible for the entire project. The work performed may include new work, additions, alterations, maintenance, and repairs. The production work performed by establishments in this subsector is usually subcontracted from establishments of the general contractor type or for-sale builders, but especially in remodeling and repair construction, work also may be done directly for the owner of the property. Specialty trade contractors usually perform most of their work at the construction site, although they may have shops where they perform prefabrication and other work. Establishments primarily engaged in preparing sites for new construction are also included in this subsector.

### **County Breakdown**

The Construction sector provides 23 payroll businesses and 123 total jobs. Unfortunately, total jobs are down from the previous 2011 data. Each subsector experienced loss in jobs, the sub-sector that lost the most was Specialty Trade Contractors. The total industry earnings for this sector are just at \$9M with total sales just over \$23M.

Total sales are \$23.3M and \$20M of the sales comes from in region. Not only are in-region sales higher than exports for Construction, but imports are also higher than exports here. The imports are very high at \$60.8M. This means less of a direct self-sufficiency, but since imports are necessary for most every community, and high exports from other regions make up for low exports here, the county still maintains a healthy economic balance. Moreover, high imports are a signal for opportunity for growth. In other words, there is a demand for local construction. The question now is: can a local company supply that demand?

Total taxes collected from this sector \$179,855

Figure 62. White Pine vs State Comparison, NAICS Sector 23, Average Earnings per Job by 3-Digit Sector, 2021

## **NAICS Sector 31: Manufacturing**

*The Manufacturing sector comprises establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. The assembling of component parts of manufactured products is considered manufacturing, except in cases where the activity is appropriately classified in Sector 23, Construction.*

Note: Sectors 31, 32, and 33 all fall under the same 'Manufacturing' 2-digit heading.

### **311: Food Manufacturing**

Industries in the Food Manufacturing subsector transform livestock and agricultural products into products for intermediate or final consumption. The industry groups are distinguished by the raw materials (generally of animal or vegetable origin) processed into food products.

### **312: Beverage and Tobacco Product Manufacturing**

Industries in the Beverage and Tobacco Product Manufacturing subsector manufacture beverages and tobacco products. The Beverage Manufacturing industry group includes three types of establishments: (1) those that manufacture nonalcoholic beverages; (2) those that manufacture alcoholic beverages through the fermentation process; and (3) those that produce distilled alcoholic beverages. Ice manufacturing, while not a beverage, is included with nonalcoholic beverage manufacturing because it uses the same production process as water purification.

### **313: Textile Mills**

Industries in the Textile Mills subsector group establishments that transform a basic fiber (natural or synthetic) into a product, such as yarn or fabric that is further manufactured into usable items, such as apparel, sheets, towels, and textile bags for individual or industrial consumption. The further manufacturing may be performed in the same establishment and classified in this subsector, or it may be performed at a separate establishment and be classified elsewhere in manufacturing.

### **314: Textile Product Mills**

Industries in the Textile Product Mills subsector group establishments that make textile products (except apparel). With a few exceptions, processes used by these establishments are generally cut and sew (i.e., purchasing fabric and cutting and sewing to make nonapparel textile products, such as sheets and towels).

### **315: Apparel Manufacturing**

Industries in the Apparel Manufacturing subsector group establishments with two distinct manufacturing processes: (1) cut and sew (i.e., purchasing fabric and cutting and sewing to make a garment) and (2) the manufacture of garments in establishments that first knit fabric and then cut and sew the fabric into a garment. The Apparel Manufacturing subsector includes a diverse range of establishments manufacturing full lines of ready-to wear apparel and custom apparel: apparel contractors, performing cutting or sewing operations on materials owned by others; jobbers, performing entrepreneurial functions involved in apparel manufacturing; and tailors, manufacturing custom garments for individual clients. Knitting fabric, when done alone, is classified in the Textile Mills subsector, but when knitting is combined with the production of complete garments, the activity is classified in the Apparel Manufacturing subsector.

### **316: Leather and Allied Product Manufacturing**

Establishments in the Leather and Allied Product Manufacturing subsector transform hides into leather by tanning or curing and fabricating the leather into products for final consumption. This subsector also includes the manufacture of similar products from other materials, including products (except apparel) made from "leather substitutes," such as rubber, plastics, or textiles. Rubber footwear, textile luggage, and plastics purses or wallets are examples of "leather substitute" products included in this subsector. The products made from leather substitutes are included in this subsector because they are made in similar ways leather products are made (e.g., luggage). They are made in the same establishments, so it is not practical to separate them.

### **County Breakdown**

This sector is not very active in White Pine. There is only 1 payroll business, and the data is suppressed for total jobs but it's likely not to be much. This sector has not changed much from 2011 to 2021, there is only one change worth mentioning. In the Beverage and Tobacco Product Manufacturing, this subsector had 15 total jobs in 2011 and now has less than 10. Despite not being very active the industry still manages to have \$225,387 in earnings. .... Taxes collected for this sector \$369,187.

Table 68. White Pine NAICS Sector 31, 3-Digit Snapshot: Jobs and Earnings, 2021

Figure 64. White Pine vs State Comparison, NAICS Sector 31, Average Earnings per Job by 3-Digit Sector, 2021

## **NAICS Sector 32: Manufacturing**

*The Manufacturing sector comprises establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. The assembling of component parts of manufactured products is considered manufacturing, except in cases where the activity is appropriately classified in Sector 23, Construction.*

Note: Sectors 31, 32, and 33 all fall under the same ‘Manufacturing’ 2-digit heading.

### **321: Wood Product Manufacturing**

Establishments in the Wood Product Manufacturing subsector manufacture wood products, such as lumber, plywood, veneers, wood containers, wood flooring, wood trusses, manufactured homes (i.e., mobile homes), and prefabricated wood buildings. The production processes of the Wood Product Manufacturing subsector include sawing, planing, shaping, laminating, and assembling wood products starting from logs that are cut into bolts, or lumber that then may be further cut, or shaped by lathes or other shaping tools.

### **322: Paper Manufacturing**

Industries in the Paper Manufacturing subsector make pulp, paper, or converted paper products. The manufacturing of these products is grouped together because they constitute a series of vertically connected processes. More than one is often carried out in a single establishment. There are essentially three activities. The manufacturing of pulp involves separating the cellulose fibers from other impurities in wood or used paper. The manufacturing of paper involves matting these fibers into a sheet. The manufacturing of converted paper products involves converting paper and other materials by various cutting and shaping techniques and includes coating and laminating activities.

### **323: Printing and Related Support Activities**

Industries in the Printing and Related Support Activities subsector print products, such as newspapers, books, labels, business cards, stationery, business forms, and other materials, and perform support activities, such as data imaging, platemaking services, and bookbinding. The support activities included here are an integral part of the printing industry, and a product (a printing plate, a bound book, or a computer disk or file) that is an integral part of the printing industry is almost always provided by these operations

### **324: Petroleum and Coal Products Manufacturing**

The Petroleum and Coal Products Manufacturing subsector is based on the transformation of crude petroleum and coal into usable products. The dominant process is petroleum refining that involves the separation of crude petroleum into component products through such techniques as cracking and distillation.

### **325: Chemical Manufacturing**

The Chemical Manufacturing subsector is based on the transformation of organic and inorganic raw materials by a chemical process and the formulation of products. This subsector distinguishes the production of basic chemicals that comprise the first industry group from the production of intermediate and end products produced by further processing of basic chemicals that make up the remaining industry groups.

### **326: Plastics and Rubber Products Manufacturing**

Industries in the Plastics and Rubber Products Manufacturing subsector make goods by processing plastics materials and raw rubber. The core technology employed by establishments in this subsector is that of plastics or rubber product production. Plastics and rubber are combined in the same subsector because plastics are increasingly being used as a substitute for rubber; however, the subsector is generally restricted to the production of products made of just one material, either solely plastics or rubber.

### **327: Nonmetallic Mineral Product Manufacturing**

The Nonmetallic Mineral Product Manufacturing subsector transforms mined or quarried nonmetallic minerals, such as sand, gravel, stone, clay, and refractory materials, into products for intermediate or final consumption.

### **County Breakdown**

This sector provides White Pine with only 2 payroll businesses and only 13 jobs. The 13 jobs in 2021 is an increase from 2011, when all of the data was too insufficient to record. There may be more jobs, but the data in other subsectors were suppressed. The same can be said for the average earnings per job, the only subsector to report earnings per job was the Nonmetallic Mineral Product Manufacturing. They average \$48,308 which is almost half of what the rest of Nevada averages in the same subsector.

Despite not being very active this industry does still bring in decent earnings. However, imports are very high at \$69,617,441 which is far more than total industry earnings and sales. Once again showing a pattern for a need in this sector.

Total taxes collected in this sector \$70,394.

Table 70. White Pine NAICS Sector 32, 3-Digit Snapshot: Jobs and Earnings, 2021

## **NAICS Sector 33: Manufacturing**

*The Manufacturing sector comprises establishments engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. The assembling of component parts of manufactured products is considered manufacturing, except in cases where the activity is appropriately classified in Sector 23, Construction.*

Note: Sectors 31, 32, and 33 all fall under the same ‘Manufacturing’ 2-digit heading.

### **331: Primary Metal Manufacturing**

Industries in the Primary Metal Manufacturing subsector smelt and/or refine ferrous and nonferrous metals from ore, pig or scrap, using electrometallurgical and other process metallurgical techniques. Establishments in this subsector also manufacture metal alloys and super alloys by introducing other chemical elements to pure metals. The output of smelting and refining, usually in ingot form, is used in rolling, drawing, and extruding operations to make sheet, strip, bar, rod, or wire, and in molten form to make castings and other basic metal products.

### **332: Fabricated Metal Product Manufacturing**

Industries in the Fabricated Metal Product Manufacturing subsector transform metal into intermediate or end products, other than machinery, computers and electronics, and metal furniture, or treat metals and metal formed products fabricated elsewhere. Important fabricated metal processes are forging, stamping, bending, forming, and machining, used to shape individual pieces of metal; and other processes, such as welding and assembling, used to join separate parts together. Establishments in this subsector may use one of these processes or a combination of these processes.

### **334: Computer and Electronic Product Manufacturing**

Industries in the Computer and Electronic Product Manufacturing subsector group establishments that manufacture computers, computer peripherals, communications equipment, and similar electronic products, and establishments that manufacture components for such products. The Computer and Electronic Product Manufacturing industries have been combined in the hierarchy of NAICS because of the economic significance they have attained.

#### **County Breakdown**

This sector is very similar to the one previously. There is very minimal activity, with not enough data report. It has remained the same from 2011 to 2021. Imports continue to be very high in this sector, far outweighing total sales and industry earnings.

Total taxes collected \$95,438.

### **335: Electrical Equipment, Appliance, and Component Manufacturing**

Industries in the Electrical Equipment, Appliance, and Component Manufacturing subsector manufacture products that generate, distribute and use electrical power. Electric Lighting Equipment Manufacturing establishments produce electric lamp bulbs, lighting fixtures, and parts. Household Appliance Manufacturing establishments make both small and major electrical appliances and parts. Electrical Equipment Manufacturing establishments make goods, such as electric motors, generators, transformers, and switchgear apparatus. Other Electrical Equipment and Component Manufacturing establishments make devices for storing electrical power (e.g., batteries), for transmitting electricity (e.g., insulated wire), and wiring devices (e.g., electrical outlets, fuse boxes, and light switches).

### **336: Transportation Equipment Manufacturing**

Industries in the Transportation Equipment Manufacturing subsector produce equipment for transporting people and goods. Transportation equipment is a type of machinery. An entire subsector is devoted to this activity because of the significance of its economic size in all three North American countries.

### **337: Furniture and Related Product Manufacturing**

Industries in the Furniture and Related Product Manufacturing subsector make furniture and related articles, such as mattresses, window blinds, cabinets, and fixtures. The processes used in the manufacture of furniture include the cutting, bending, molding, laminating, and assembly of such materials as wood, metal, glass, plastics, and rattan.

### **339: Miscellaneous Manufacturing**

Industries in the Miscellaneous Manufacturing subsector make a wide range of products that cannot readily be classified in specific NAICS subsectors in manufacturing. Processes used by these establishments vary significantly, both among and within industries.

## **NAICS Sector 42: Wholesale Trade**

*The Wholesale Trade sector comprises establishments engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The merchandise described in this sector includes the outputs of agriculture, mining, manufacturing, and certain information industries, such as publishing.*

### **423: Merchant Wholesalers, Durable Goods**

Industries in the Merchant Wholesalers, Durable Goods subsector sell capital or durable goods to other businesses. Merchant wholesalers generally take title to the goods that they sell; in other words, they buy and sell goods on their own account. Durable goods are new or used items generally with a normal life expectancy of three years or more.

### **424: Merchant Wholesalers, Nondurable Goods**

Industries in the Merchant Wholesalers, Nondurable Goods subsector sell nondurable goods to other businesses. Nondurable goods are items generally with a normal life expectancy of less than three years. Nondurable goods merchant wholesale trade establishments are engaged in wholesaling products, such as paper and paper products, chemicals and chemical products, drugs, textiles and textile products, apparel, footwear, groceries, farm products, petroleum and petroleum products, alcoholic beverages, books, magazines, newspapers, flowers and nursery stock, and tobacco products.

### **425: Wholesale Electronic Markets and Agents and Brokers**

Industries in the Wholesale Electronic Markets and Agents and Brokers subsector arrange for the sale of goods owned by others, generally on a fee or commission basis. They act on behalf of the buyers and sellers of goods. This subsector contains agents and brokers as well as business-to-business electronic markets that facilitate wholesale trade.

### **County Breakdown**

The Wholesale Trade industry has changed from 2011 to 2021. Total jobs have increased by almost 20 in the Merchant Wholesalers, Durable Goods; having 51 jobs, 2 payroll businesses, and averaging \$92,161 per job this subsector is the highlight of this sector. Bringing in over \$4.8M in total industry earnings, it is the only subsector to earn over a million dollars. Merchant Wholesalers, Nondurable Goods went from having 35 jobs in 2011 to now having less than 10. However, there are still 3 payroll businesses, and they bring in a total industry earning of \$704,152. The third subsector does report one payroll business; however, all the other data is too insufficient to report.

The imports are high in this sector at over \$67M, this is twice the number of total sales for this sector. However, this is to be suspected when not much output is coming from a sector.

Total taxes collected \$11,565,800.

## **NAICS Sector 44: Retail Trade**

*The Retail Trade sector comprises establishments engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The retailing process is the final step in the distribution of merchandise; retailers are, therefore, organized to sell merchandise in small quantities to the general public. This sector comprises two main types of retailers: store and nonstore retailers.*

Note: Sectors 44 and 45 fall under the same 'Retail Trade' 2-digit heading.

### **441: Motor Vehicle and Parts Dealers**

Industries in the Motor Vehicle and Parts Dealers subsector retail motor vehicles and parts from fixed point-of-sale locations. Establishments in this subsector typically operate from a showroom and/or an open lot where the vehicles are on display. The display of vehicles and the related parts require little by way of display equipment.

### **442: Furniture and Home Furnishings Stores**

Industries in the Furniture and Home Furnishings Stores subsector retail new furniture and home furnishings from fixed point-of-sale locations. Establishments in this subsector usually operate from showrooms and have substantial areas for the presentation of their products. Many offer interior decorating services in addition to the sale of products.

### **443: Electronics and Appliance Stores**

Industries in the Electronics and Appliance Stores subsector retail new electronics and appliances from point-of sale locations. Establishments in this subsector often operate from locations that have special provisions for floor displays requiring special electrical capacity to accommodate the proper demonstration of the products. The staff includes sales personnel knowledgeable in the characteristics and warranties of the line of goods retailed and may also include trained repair persons to handle the maintenance and repair of the electronic equipment and appliances.

### **444: Building Material and Garden Equipment and Supplies Dealers**

Industries in the Building Material and Garden Equipment and Supplies Dealers subsector retail new building material and garden equipment and supplies from fixed point-of-sale locations. Establishments in this subsector have display equipment designed to handle lumber and related products and garden equipment and supplies that may be kept either indoors or outdoors under covered areas. The staff is usually knowledgeable in the use of the specific products being retailed in the construction, repair, and maintenance of the home and associated grounds.

### **445: Food and Beverage Stores**

Industries in the Food and Beverage Stores subsector usually retail food and beverage merchandise from fixed point-of-sale locations. Establishments in this subsector have special equipment (e.g., freezers, refrigerated display cases, refrigerators) for displaying food and beverage goods.

### **446: Health and Personal Care Stores**

Industries in the Health and Personal Care Stores subsector retail health and personal care merchandise from fixed point-of-sale locations. Establishments in this subsector are characterized principally by the products they retail, and some health and personal care stores may have specialized staff trained in dealing with the products. Staff may include pharmacists, opticians, and other professionals engaged in retailing, advising customers, and/or fitting the product sold to the customer's needs.

### **447: Gasoline Stations**

Industries in the Gasoline Stations subsector retail automotive fuels (e.g., gasoline, diesel fuel, gasohol, alternative fuels) and automotive oils or retail these products in combination with convenience store items. These establishments have specialized equipment for storing and dispensing automotive fuels.

### **448: Clothing and Clothing Accessories Stores**

Industries in the Clothing and Clothing Accessories Stores subsector retail new clothing and clothing accessories from fixed point-of-sale locations. Establishments in this subsector have similar display equipment and staff that is knowledgeable regarding fashion trends and the proper match of styles, colors, and combinations of clothing and accessories to the characteristics and tastes of the customer.

### **County Breakdown**

In this sector five of the eight subsectors increased in jobs from 2011 to 2021. There are now a total 332 jobs and 20 payroll businesses. Most of the subsectors are active with six of them having a total industry earning over one million. Exported sales are greater than imports which is a healthy sign for this sector and White Pine's Economy.

Table 76. White Pine NAICS Sector 44, 3-Digit Snapshot: Jobs and Earnings, 2021

NAICS	2011 Jobs	2021 Jobs	Payroll Businesses	Average Earnings/Job	Total Industry Earnings

## **NAICS Sector 45: Retail Trade**

*The Retail Trade sector comprises establishments engaged in retailing merchandise, generally without transformation, and rendering services incidental to the sale of merchandise. The retailing process is the final step in the distribution of merchandise; retailers are, therefore, organized to sell merchandise in small quantities to the general public. This sector comprises two main types of retailers: store and nonstore retailers.*

Note: Sectors 44 and 45 fall under the same ‘Retail Trade’ 2-digit heading.

### **451: Sporting Goods, Hobby, Musical Instrument, and Book Stores**

Industries in the Sporting Goods, Hobby, Musical Instrument, and Book Stores subsector are engaged in retailing and providing expertise on the use of sporting equipment or supplies for other specific leisure activities, such as needlework and musical instruments.

### **452: General Merchandise Stores**

Industries in the General Merchandise Stores subsector retail new general merchandise from fixed point-of-sale locations. Establishments in this subsector are unique in that they have the equipment and staff capable of retailing a large variety of goods from a single location.

### **453 Miscellaneous Store Retailers**

Industries in the Miscellaneous Store Retailers subsector retail merchandise from fixed point-of-sale locations (except new or used motor vehicles and parts; new furniture and home furnishings; new appliances and electronic products; new building materials and garden equipment and supplies; food and beverages; health and personal care goods; gasoline; new clothing and accessories; and new sporting goods, hobby goods, books, and music).

### **454: Nonstore Retailers**

Industries in the Nonstore Retailers subsector retail merchandise using methods, such as the broadcasting of infomercials, the broadcasting and publishing of direct-response advertising, the publishing of paper and electronic catalogs, door-to-door solicitation, in-home demonstration, selling from portable stalls, and distribution through vending machines.

### **County Breakdown**

This sector of the Retail Trade industry provides White Pine with 89 jobs and seven payroll businesses. This is an overall increase in total jobs from 2011. Although this sector is far less active than the previous retail sector, it still manages to produce decent earnings for White Pine.

When compared to Nevada the average earning per job is slightly less in White Pine. Total sales are high at almost \$10M, most of the sales come from exported sales. Despite having high exported and total sales, imports remain much higher at \$16M. With low in region sales and high imports, an opportunity for potential growth is here.

Total taxes collected in this sector \$1,402,953.

Table 78. White Pine NAICS Sector 45, 3-Digit Snapshot: Jobs and Earnings, 2021

Figure 74. White Pine vs State Comparison, NAICS Sector 45, Average Earnings per Job by 3-Digit Sector, 2021

## **NAICS Sector 48: Transportation and Warehousing**

*The Transportation and Warehousing sector includes industries providing transportation of passengers and cargo, warehousing and storage for goods, scenic and sightseeing transportation, and support activities related to modes of transportation. Establishments in these industries use transportation equipment or transportation related facilities as a productive asset. The type of equipment depends on the mode of transportation. The modes of transportation are air, rail, water, road, and pipeline.*

Note: Sectors 48 and 49 fall under the same 'Transportation and Warehousing' 2-digit heading.

### **481: Air Transportation**

Industries in the Air Transportation subsector provide air transportation of passengers and/or cargo using aircraft, such as airplanes and helicopters. The subsector distinguishes scheduled from nonscheduled air transportation. Scheduled air carriers fly regular routes on regular schedules and operate even if flights are only partially loaded. Nonscheduled carriers often operate during nonpeak time slots at busy airports. These establishments have more flexibility with respect to choice of airport, hours of operation, load factors, and similar operational characteristics.

### **482: Rail Transportation**

Industries in the Rail Transportation subsector provide rail transportation of passengers and/or cargo using railroad rolling stock. The railroads in this subsector primarily either operate on networks, with physical facilities, labor force, and equipment spread over an extensive geographic area, or operate over a short distance on a local rail line.

### **483: Water Transportation**

Industries in the Water Transportation subsector provide water transportation of passengers and cargo using watercraft, such as ships, barges, and boats.

### **484: Truck Transportation**

Industries in the Truck Transportation subsector provide over-the-road transportation of cargo using motor vehicles, such as trucks and tractor trailers. The subsector is subdivided into general freight trucking and specialized freight trucking.

### **485: Transit and Ground Passenger Transportation**

Industries in the Transit and Ground Passenger Transportation subsector include a variety of passenger transportation activities, such as urban transit systems; chartered bus, school bus, and interurban bus transportation; and taxis. These activities are distinguished based primarily on such production process factors as vehicle types, routes, and schedules.

### **486: Pipeline Transportation**

Industries in the Pipeline Transportation subsector use transmission pipelines to transport products, such as crude oil, natural gas, refined petroleum products, and slurry. Industries are identified based on the products transported.

### **488: Support Activities for Transportation**

Industries in the Support Activities for Transportation subsector provide services which support transportation. These services may be provided to transportation carrier establishments or to the general public.

### **County Breakdown**

This sector has minimal activity for White Pine having a little more than 27 jobs, it is hard to gauge as some subsectors data was too insufficient. But the recorded 27 jobs are a decrease from the previous 33 jobs in 2011. The sector has a total of six payroll businesses, and only the Truck Transportation subsector was able to provide average earnings per job as the others were insufficient. When compared to Nevada the Truck Transportation subsector averages nearly the same at \$72,735.

With minimal activity going on in this sector it is suspected of the total sales to be low and imports to be high. That is exactly what can be seen here. Imports are extremely high at \$30M plus, while total sales barely crack \$7M.

Taxes collected in this sector \$259,982.

Table 80 White Pine NAICS Sector 48, 3-Digit Snapshot: Jobs and Earnings, 2021

Figure 76. White Pine vs State Comparison, NAICS Sector 48, Average Earnings per Job by 3-Digit Sector, 2021

## **NAICS Sector 49: Transportation and Warehousing**

*The Transportation and Warehousing sector includes industries providing transportation of passengers and cargo, warehousing and storage for goods, scenic and sightseeing transportation, and support activities related to modes of transportation. Establishments in these industries use transportation equipment or transportation related facilities as a productive asset. The type of equipment depends on the mode of transportation. The modes of transportation are air, rail, water, road, and pipeline.*

Note: Sectors 48 and 49 fall under the same 'Transportation and Warehousing' 2-digit heading.

### **491: Postal Service**

The Postal Service subsector includes the activities of the National Post Office and its subcontractors operating under a universal service obligation to provide mail services, and using the infrastructure required to fulfill that obligation. These services include delivering letters and small parcels.

### **492: Couriers and Messengers**

Industries in the Couriers and Messengers subsector provide intercity, local, and/or international delivery of parcels and documents (including express delivery services) without operating under a universal service obligation. These articles may originate in the U.S. but be delivered to another country and can be described as those that may be handled by one person without using special equipment.

### **493: Warehousing and Storage**

Industries in the Warehousing and Storage subsector are primarily engaged in operating warehousing and storage facilities for general merchandise, refrigerated goods, and other warehouse products. These establishments provide facilities to store goods. They do not sell the goods they handle. These establishments take responsibility for storing the goods and keeping them secure.

### **County Breakdown**

Overall jobs have increased in this sector from 2011 to 2021. There are four total payroll businesses, and the two active subsectors that have data to report each have an industry earning of over one million. The average earnings per job in the Postal Service are slightly less than Nevada's average. However, in the Couriers and Messengers subsector the average earnings per job are higher in White Pine than Nevada.

Total sales for the industry are just over \$6M, that six million is spread evenly between in region and exported sales. Imports are fairly low at \$3.5M, which is a good sign of healthy cash flow in this sector.

Taxes collected in this sector \$47,818.

## **NAICS Sector 51: Information**

*The Information sector comprises establishments engaged in the following processes: (a) producing and distributing information and cultural products, (b) providing the means to transmit or distribute these products as well as data or communications, and (c) processing data.*

### **511: Publishing Industries (except Internet)**

Industries in the Publishing Industries (except Internet) subsector group establishments engaged in the publishing of newspapers, magazines, other periodicals, and books, as well as directory and mailing list and software publishing. In general, these establishments, which are known as publishers, issue copies of works for which they usually possess copyright.

### **512: Motion Picture and Sound Recording Industries**

Industries in the Motion Picture and Sound Recording Industries subsector group establishments involved in the production and distribution of motion pictures and sound recordings. While producers and distributors of motion pictures and sound recordings issue works for sale as traditional publishers do, the processes are sufficiently different to warrant placing establishments engaged in these activities in a separate subsector.

### **515: Broadcasting (except Internet)**

Industries in the Broadcasting (except Internet) subsector include establishments that create content or acquire the right to distribute content and subsequently broadcast the content. The industry groups (Radio and Television Broadcasting and Cable and Other Subscription Programming) are based on differences in the methods of communication and the nature of services provided. The Radio and Television Broadcasting industry group includes establishments that operate broadcasting studios and facilities for over-the-air or satellite delivery of radio and television programs of entertainment, news, talk, and the like.

### **517: Telecommunications**

Industries in the Telecommunications subsector group establishments that provide telecommunications and the services related to that activity (e.g., telephony, including Voice over Internet Protocol (VoIP); cable and satellite television distribution services; Internet access; telecommunications reselling services)

### **518 Data Processing, Hosting, and Related Services**

Industries in the Data Processing, Hosting, and Related Services subsector group establishments that provide the infrastructure for hosting and/or data processing services.

### **519: Other Information Services**

Industries in the Other Information Services subsector group establishments supplying information, storing and providing access to information, searching and retrieving information, operating Web sites that use search engines to allow for searching information on the Internet, or publishing and/or broadcasting content exclusively on the Internet.

### **County Breakdown**

This sector is not very active for White Pine County, and it never really has been. There were only 18 jobs previously recorded in 2011, in 2021 there were less 10 jobs in each subsector. There are five payroll businesses, and each subsector can produce earnings, but none are over a million. The data for the average earnings per job in this sector are too insufficient to compare to Nevada's.

As suspected with minimal output, the imports are insanely high at over \$40M. With total sales barely breaking \$7M, White Pine relies heavily on outside communities to keep this sector working.

Total taxes collected in this sector \$285,399.

Table 84. White Pine NAICS Sector 51, 3-Digit Snapshot: Jobs and Earnings, 2021

## **NAICS Sector 52: Finance and Insurance**

*The Finance and Insurance sector comprises establishments primarily engaged in financial transactions (transactions involving the creation, liquidation, or change in ownership of financial assets) and/or in facilitating financial transactions.*

### **521: Monetary Authorities-Central Bank**

The Monetary Authorities-Central Bank subsector groups establishments that engage in performing central banking functions, such as issuing currency, managing the Nation's money supply and international reserves, holding deposits that represent the reserves of other banks and other central banks, and acting as a fiscal agent for the central government.

### **522: Credit Intermediation and Related Activities**

Industries in the Credit Intermediation and Related Activities subsector group establishments that (1) lend funds raised from depositors; (2) lend funds raised from credit market borrowing; or (3) facilitate the lending of funds or issuance of credit by engaging in such activities as mortgage and loan brokerage, clearinghouse and reserve services, and check cashing services.

### **523: Securities, Commodity Contracts, and Other Financial Investments and Related Activities**

Industries in the Securities, Commodity Contracts, and Other Financial Investments and Related Activities subsector group establishments that are primarily engaged in one of the following: (1) underwriting securities issues and/or making markets for securities and commodities; (2) acting as agents (i.e., brokers) between buyers and sellers of securities and commodities; (3) providing securities and commodity exchange services; and (4) providing other services, such as managing portfolios of assets; providing investment advice; and trust, fiduciary, and custody services.

### **524: Insurance Carriers and Related Activities**

Industries in the Insurance Carriers and Related Activities subsector group establishments that are primarily engaged in one of the following: (1) underwriting (assuming the risk, assigning premiums, and so forth) annuities and insurance policies or (2) facilitating such underwriting by selling insurance policies and by providing other insurance and employee benefit related services.

### **525: Funds, Trusts, and Other Financial Vehicles**

Industries in the Funds, Trusts, and Other Financial Vehicles subsector group legal entities (i.e., funds, plans, and/or programs) organized to pool securities or other assets on behalf of shareholders or beneficiaries of employee benefit or other trust funds.

### **County Breakdown**

The Finance and Insurance sector has five subsectors, with a total of 45 jobs and seven payroll businesses. However, all 45 jobs and five of the payroll businesses come from the Credit Intermediation and Related Activities. Despite the other subsectors producing earnings this is the only one where real activity can be tracked. The other two payroll businesses come from Insurance Carriers and Related Activities, where jobs decreased from 12 in 2011 to less than 10 in 2021.

Credit Intermediation and Related Activities is the only subsector to report average earnings per job at \$58,208, which is half of what the Nevada's average is. Like previous sectors before, imports are extremely high at \$79M in this sector due to the minimal output. With only \$13M in total sales, White Pine is forced to look to other communities for sustainability in this sector.

Total taxes collected in this sector \$235,219.

Table 86. White Pine NAICS Sector 52, 3-Digit Snapshot: Jobs and Earnings, 2021

## **NAICS Sector 53: Real Estate and Rental and Leasing**

*The Real Estate and Rental and Leasing sector comprises establishments primarily engaged in renting, leasing, or otherwise allowing the use of tangible or intangible assets, and establishments providing related services. The major portion of this sector comprises establishments that rent, lease, or otherwise allow the use of their own assets by others. The assets may be tangible, as is the case of real estate and equipment, or intangible, as is the case with patents and trademarks.*

### **531: Real Estate**

Industries in the Real Estate subsector group establishments primarily engaged in renting or leasing real estate to others; managing real estate for others; selling, buying, or renting real estate for others; and providing other real estate related services, such as appraisal services.

### **532: Rental and Leasing Services**

Industries in the Rental and Leasing Services subsector include establishments that provide a wide array of tangible goods, such as automobiles, computers, consumer goods, and industrial machinery and equipment, to customers in return for a periodic rental or lease payment.

### **533 Lessors of Nonfinancial Intangible Assets (except Copyrighted Works)**

Industries in the Lessors of Nonfinancial Intangible Assets (except Copyrighted Works) subsector include establishments primarily engaged in assigning rights to assets, such as patents, trademarks, brand names, and/or franchise agreements, for which a royalty payment or licensing fee is paid to the asset holder. Establishments in this subsector own the patents, trademarks, and/or franchise agreements that they allow others to use or reproduce for a fee and may or may not have created those assets.

### **County Breakdown**

The Real Estate and Rental and Leasing sector provides White Pine with 34 total jobs and 10 total payroll businesses. The 34 jobs are a decrease from 2011 when 44 jobs were reported. The Real Estate subsector is the only one of the three that is active, all 34 jobs and nine of the ten payroll businesses come from this subsector. Average earnings per job in this subsector are \$43,879, which is \$20,000 less than the states average. The other subsectors data is too insufficient to compare to Nevada. Total industry earnings mostly all come from Real Estate at just over \$2M.

As suspected with a sector that has minimal output, imports are extremely high at \$27M. With total sales just over \$11M, this sector is forced to rely heavily on other communities.

Total taxes collected in this sector \$490,070.

## **NAICS Sector 54: Professional, Scientific, and Technical Services**

*The Professional, Scientific, and Technical Services sector comprises establishments that specialize in performing professional, scientific, and technical activities for others. These activities require a high degree of expertise and training. The establishments in this sector specialize according to expertise and provide these services to clients in a variety of industries and, in some cases, to households. Activities performed include: legal advice and representation; accounting, bookkeeping, and payroll services; architectural, engineering, and specialized design services; computer services; consulting services; research services; advertising services; photographic services; translation and interpretation services; veterinary services; and other professional, scientific, and technical services.*

### **541: Professional, Scientific, and Technical Services**

Industries in the Professional, Scientific, and Technical Services subsector group establishments engaged in processes where human capital is the major input. These establishments make available the knowledge and skills of their employees, often on an assignment basis, where an individual or team is responsible for the delivery of services to the client.

#### **County Breakdown**

Total jobs decreased in this sector from 54 in 2011 to 39 in 2021. There are 11 payroll businesses that average \$64,577, which is \$30,000 less than the state's average. The industry brings in decent earnings over \$3M.

Imports are extremely high in this sector at \$61M, total sales do not even come close at \$5.8M. This industry depends heavily on imports from other places, without them it could start to fail.

Taxes collected in this sector \$164,248.

## **NAICS Sector 55: Management of Companies and Enterprises**

*The Management of Companies and Enterprises sector comprises (1) establishments that hold the securities of (or other equity interests in) companies and enterprises for the purpose of owning a controlling interest or influencing management decisions or (2) establishments (except government establishments) that administer, oversee, and manage establishments of the company or enterprise and that normally undertake the strategic or organizational planning and decision-making role of the company or enterprise. Establishments that administer, oversee, and manage may hold the securities of the company or enterprise.*

### **551: Management of Companies and Enterprises**

Industries in the Management of Companies and Enterprises subsector include three main types of establishments: (1) those that hold the securities of (or other equity interests in) companies and enterprises; (2) those (except government establishments) that administer, oversee, and manage other establishments of the company or enterprise but do not hold the securities of these establishments; and (3) those that both administer, oversee, and manage other establishments of the company or enterprise and hold the securities of (or other equity interests in) these establishments.

#### **County Breakdown**

This sector was not very active for White Pine in 2021. In 2011 there were 19 jobs and in 2021 the data was insufficient, for both total jobs and average earnings per job. There are two payroll businesses and a total industry earning of \$1,103,656.

This sector is very similar to the one before, minimal output means high imports. That is exactly what can be seen in this sector. Total sales are only at \$1.9M, while imports sit atop at \$33M.

Total taxes paid in this sector \$35,166.

Table 92. White Pine NAICS Sector 55, 3-Digit Snapshot: Jobs and Earnings, 2021

## **NAICS Sector 56: Administrative, Support, Waste Management, Remediation Services**

*The Administrative and Support and Waste Management and Remediation Services sector comprises establishments performing routine support activities for the day-to-day operations of other organizations. These essential activities are often undertaken in-house by establishments in many sectors of the economy. The establishments in this sector specialize in one or more of these support activities and provide these services to clients in a variety of industries and, in some cases, to households. Activities performed include: office administration, hiring and placing of personnel, document preparation and similar clerical services, solicitation, collection, security and surveillance services, cleaning, and waste disposal services.*

### **561: Administrative and Support Services**

Industries in the Administrative and Support Services subsector group establishments engaged in activities that support the day-to-day operations of other organizations. The processes employed in this sector (e.g., general management, personnel administration, clerical activities, cleaning activities) are often integral parts of the activities of establishments found in all sectors of the economy.

### **562: Waste Management and Remediation Services**

Industries in the Waste Management and Remediation Services subsector group establishments engaged in the collection, treatment, and disposal of waste materials. This includes establishments engaged in local hauling of waste materials; operating materials recovery facilities (i.e., those that sort recyclable materials from the trash stream); providing remediation services (i.e., those that provide for the cleanup of contaminated buildings, mine sites, soil, or ground water); and providing septic pumping and other miscellaneous waste management services.

### **County Breakdown**

It is hard to gage the overall change in this sector as data for the Waste Management and Remediation Services has been suppressed. However, that is not the focus of this subsector. Administrative and Support Services is where all the work is happening in this sector. The jobs have increased in this subsector since 2011 and there are 11 payroll businesses averaging \$36,741 per job; this is about \$10,000 less than the states average.

Total sales are decent at just over \$8M, but when compared to the imports at \$20M they just don't hold up. This sector relies heavy on its imports to keep functioning.

Total taxes collected from this sector \$149,590.

Table 94. White Pine NAICS Sector 56, 3-Digit Snapshot: Jobs and Earnings, 2021

## **NAICS Sector 61: Educational Services**

*The Educational Services sector comprises establishments that provide instruction and training in a wide variety of subjects. This instruction and training is provided by specialized establishments, such as schools, colleges, universities, and training centers. These establishments may be privately owned and operated for profit or not for profit, or they may be publicly owned and operated. They may also offer food and/or accommodation services to their students.*

### **611: Educational Services**

Industries in the Educational Services subsector provide instruction and training in a wide variety of subjects. The instruction and training is provided by specialized establishments, such as schools, colleges, universities, and training centers.

#### **County Breakdown**

Not much has changed in this sector for White Pine from 2011 to 2021. Total jobs remain to be suppressed as well as the average earnings per job. There is one payroll businesses and a total industry earning of \$287,695.

As suspected with low in region and exported sales, imports are high at \$8M in this sector. Naturally being an industry that doesn't produce a lot of money it relies on the inflow of money to keep going.

Taxes collected in this sector \$11,542.

Table 96. White Pine NAICS Sector 61, 3-Digit Snapshot: Jobs and Earnings, 2021

## **NAICS Sector 62: Health Care and Social Assistance**

*The Health Care and Social Assistance sector comprises establishments providing health care and social assistance for individuals. The sector includes both health care and social assistance because it is sometimes difficult to distinguish between the boundaries of these two activities. The industries in this sector are arranged on a continuum starting with establishments providing medical care exclusively, continuing with those providing health care and social assistance, and finally finishing with those providing only social assistance. Establishments in this sector deliver services by trained professionals. All industries in the sector share this commonality of process, namely, labor inputs of health practitioners or social workers with the requisite expertise. Many of the industries in the sector are defined based on the educational degree held by the practitioners included in the industry.*

### **621: Ambulatory Health Care Services**

Industries in the Ambulatory Health Care Services subsector provide health care services directly or indirectly to ambulatory patients and do not usually provide inpatient services. Health practitioners in this subsector provide outpatient services, with the facilities and equipment not usually being the most significant part of the production process.

### **622: Hospitals**

Industries in the Hospitals subsector provide medical, diagnostic, and treatment services that include physician, nursing, and other health services to inpatients and the specialized accommodation services required by inpatients. Hospitals may also provide outpatient services as a secondary activity.

### **623: Nursing and Residential Care Facilities**

Industries in the Nursing and Residential Care Facilities subsector provide residential care combined with either nursing, supervisory, or other types of care as required by the residents. In this subsector, the facilities are a significant part of the production process, and the care provided is a mix of health and social services with the health services being largely some level of nursing services.

### **624: Social Assistance**

Industries in the Social Assistance subsector provide a wide variety of social assistance services directly to their clients. These services do not include residential or accommodation services, except on a short-stay basis.

#### **County Breakdown**

The Health Care and Social Assistance industry provides White Pine with 17 payroll businesses and 177 jobs. This is a decrease from the 202 jobs in 2011. Nevertheless, average earnings per job are moderate, and total industry earnings are over \$8 million.

While average earnings are decent, those in the Ambulatory Health Care Services earn nearly \$30,000 less than Nevada's average. While the other two active subsectors report having a higher average earning than Nevada. Both in region and exported sales are over a million in the three active subsectors. Despite the good sale numbers, imports are still very high at over \$50M.

Total taxes collected in this sector \$325,316.

## **NAICS Sector 71: Arts, Entertainment, and Recreation**

*The Arts, Entertainment, and Recreation sector includes a wide range of establishments that operate facilities or provide services to meet varied cultural, entertainment, and recreational interests of their patrons. This sector comprises (1) establishments that are involved in producing, promoting, or participating in live performances, events, or exhibits intended for public viewing; (2) establishments that preserve and exhibit objects and sites of historical, cultural, or educational interest; and (3) establishments that operate facilities or provide services that enable patrons to participate in recreational activities or pursue amusement, hobby, and leisure-time interests.*

### **711: Performing Arts, Spectator Sports, and Related Industries**

Industries in the Performing Arts, Spectator Sports, and Related Industries subsector group establishments that produce or organize and promote live presentations involving the performances of actors and actresses, singers, dancers, musical groups and artists, athletes, and other entertainers, including independent (i.e., freelance) entertainers and the establishments that manage their careers. The classification recognizes four basic processes: (1) producing (i.e., presenting) events; (2) organizing, managing, and/or promoting events; (3) managing and representing entertainers; and (4) providing the artistic, creative and technical skills necessary to the production of these live events. Also, this subsector contains four industries for performing arts companies. Each is defined on the basis of the particular skills of the entertainers involved in the presentations.

### **712: Museums, Historical Sites, and Similar Institutions**

Industries in the Museums, Historical Sites, and Similar Institutions subsector engage in the preservation and exhibition of objects, sites, and natural wonders of historical, cultural, and/or educational value.

### **713: Amusement, Gambling, and Recreation Industries**

Industries in the Amusement, Gambling, and Recreation Industries subsector (1) operate facilities where patrons can primarily engage in sports, recreation, amusement, or gambling activities and/or (2) provide other amusement and recreation services, such as supplying and servicing amusement devices in places of business operated by others; operating sports teams, clubs, or leagues engaged in playing games for recreational purposes; and guiding tours without using transportation equipment.

### **County Breakdown**

Jobs increased overall for White Pine in the Arts, Entertainment, and Recreation sector. Total jobs used to be around 27 in 2011, then rose to somewhere around 44 jobs in 2021. It is hard to gauge exactly how many jobs were lost or gained because data for one of the three subsectors is suppressed. There are six payroll businesses, and average earnings per job are the same compared to Nevada's averages.

The industry earnings are decent for each subsector, even the one that's not very active. Imports are fairly low, but so are the total sales. However, it seems like a very self-sufficient sector with healthy money flowing in and out.

Total taxes collected from this sector \$510,911.

## **NAICS Sector 72: Accommodation and Food Services**

*The Accommodation and Food Services sector comprises establishments providing customers with lodging and/or preparing meals, snacks, and beverages for immediate consumption. The sector includes both accommodation and food services establishments because the two activities are often combined at the same establishment.*

### **721: Accommodation**

Industries in the Accommodation subsector provide lodging or short-term accommodations for travelers, vacationers, and others. There is a wide range of establishments in these industries. Some provide lodging only, while others provide meals, laundry services, and recreational facilities, as well as lodging. Lodging establishments are classified in this subsector even if the provision of complementary services generates more revenue.

### **722: Food Services and Drinking Places**

Industries in the Food Services and Drinking Places subsector prepare meals, snacks, and beverages to customer order for immediate on-premises and off-premises consumption. There is a wide range of establishments in these industries. Some provide food and drink only, while others provide various combinations of seating space, waiter/waitress services, and incidental amenities, such as limited entertainment.

### **County Breakdown**

The Accommodation and Food Services provides White Pine with 465 jobs and 35 payroll businesses. This is a decrease from the 523 jobs previously recorded in 2011, however industry earnings are still decent over \$14M.

However, the average earnings per job in both subsectors are less than Nevada's average. Imports are very low at only \$4M, while total sales are great at over \$40M. There are both great exported and in-region sales, displaying a healthy flow of money in this sector.

Total taxes collected in this sector \$6,541,452.

## **NAICS Sector 81: Other Services (Except Public Administration)**

*The Other Services (except Public Administration) sector comprises establishments engaged in providing services not specifically provided for elsewhere in the classification system. Establishments in this sector are primarily engaged in activities such as equipment and machinery repairing, promoting or administering religious activities, grantmaking, advocacy, and providing drycleaning and laundry services, personal care services, death care services, pet care services, photofinishing services, temporary parking services, and dating services.*

### **811: Repair and Maintenance**

Industries in the Repair and Maintenance subsector restore machinery, equipment, and other products to working order. These establishments also typically provide general or routine maintenance (i.e., servicing) on such products to ensure they work efficiently and to prevent breakdown and unnecessary repairs.

### **812: Personal and Laundry Services**

Industries in the Personal and Laundry Services subsector group establishments that provide personal and laundry services to individuals, households, and businesses. Services performed include: personal care services; death care services; laundry and dry-cleaning services; and a wide range of other personal services, such as pet care (except veterinary) services, photofinishing services, temporary parking services, and dating services.

### **813: Religious, Grantmaking, Civic, Professional, and Similar Organizations**

Industries in the Religious, Grantmaking, Civic, Professional, and Similar Organizations subsector group establishments that organize and promote religious activities; support various causes through grantmaking; advocate various social and political causes; and promote and defend the interests of their members.

### **814 Private Households**

Industries in the Private Households subsector include private households that engage in employing workers on or about the premises in activities primarily concerned with the operation of the household. These private households may employ individuals, such as cooks, maids, butlers, and outside workers, such as gardeners, caretakers, and other maintenance workers.

#### **County Breakdown**

In White Pine there are 16 payroll businesses and 111 jobs in the Other Services (Except Public Administration) sector. Total jobs have decreased since 2011 by 35 jobs, a majority of the jobs lost come from the Private Households subsector. The average earnings per job are slightly less compared to Nevada, except in the 813 subsector where the earnings are higher than Nevada's.

Imports are slightly higher than total sales, however there is a great distribution between in region and exported sales. This displays a self-sustaining sector with good money flowing in and out.

Total taxes collected in this sector \$604,333.

## **NAICS Sector 90: Public Administration**

*The Public Administration sector consists of establishments of federal, state, and local government agencies that administer, oversee, and manage public programs and have executive, legislative, or judicial authority over other institutions within a given area. These agencies also set policy, create laws, adjudicate civil and criminal legal cases, and provide for public safety and for national defense. In general, government establishments in the Public Administration sector oversee governmental programs and activities that are not performed by private establishments. Establishments in this sector typically are engaged in the organization and financing of the production of public goods and services, most of which are provided for free or at prices that are not economically significant.*

The official NAICS handbook uses NAICS Code 92 – Public Administration. The above definition comes from that. NAICS 90 was created by EMSI to not only simplify the coding process, but also to handle the data similarly to other respected data entities, such as the BEA, CES, and OES.

EMSI's reasoning of the change to code 90:

*NAICS is intended to classify an establishment's activity regardless of its ownership (public or private sector) or legal form of organization (proprietorship, partnership, corporation, for-profit, nonprofit, etc.). However, due to the realities of available data, Emsi treats establishments with public and private sector ownership differently. In Emsi data, all establishments in the main NAICS hierarchy are private-sector only — including 611 (Educational Services) and 62 (Health Care and Social Assistance). Thus, Emsi does not use the standard NAICS classification in code 92 (Public Administration). This handling is similar to Current Employment Statistics (CES), Occupational Employment Statistics (OES), and BEA data sources. QCEW is the major data source that does use code 92, because QCEW includes an "ownership code" (private, federal, state, local) in addition to an industry code.*  
<https://kb.economicmodeling.com/how-do-ems-naics-differ-from-standard-naics/>

### **901: Federal Government**

This industry comprises all federal government entities.

### **902: State Government**

This industry group comprises state-level establishments.

### **903: Local Government**

This industry group comprises local-level government agencies.

#### **County Breakdown**

Given this sector is comprised of the three governments there is a lot of activity that can be seen. This sector by far provides White Pine County with the most jobs at a total of 1,238 in 2021 which has decreased by 201 from the previous total in 2011. Two of the three governments average more earnings per job compared to Nevada. However, with high imports and total sales to match there seems to be a healthy system.

Table 106. White Pine NAICS Sector 90, 3-Digit Snapshot: Jobs and Earnings, 2021

NAICS	2011 Jobs	2021 Jobs	Payroll Businesses	Average Earnings/Job	Total Industry Earnings

# Land Use and Fiscal Characteristics

This section includes measures of land use within the county and various fiscal measurements. Under the land portion, measures include: land ownership, land coverage, federal land payments, and the distribution of those payments. Under the fiscal heading, measures include: taxable sales, ad valorem, gaming taxes, and the revenue, expenditure, and balance of the county general fund.

Measures of land use are important for private sector and government parties interested in development or reorganization. Segmented zones such as the residential, business and commercial, industrial, and recreational, require identification of the layout of the land. Furthermore, anything government-based, such as construction involved with roads or utilities, is important for community planning as well as businesses working around new construction.

Land Use and Fiscal Characteristics

Data in this section is sourced from:

- Headwaters Economics’ Economic Profile System
- Nevada Department of Taxation
- Nevada Gaming Control Board
- U.S. Geological Survey

County Breakdown

Land Management and Coverage:

Land Management in White Pine County is broken up by several different categories, where BLM owns the majority of land at 79%. For comparison, US Forest Service, is accounting for 13.8% of the acreage and the City/County/Other/Private Lands is accounting for 4.2% of the total acres as well. The National Park Service and Tribal are the other Land Management groups owning a percentage of acres with 2.7% and 0.3% owned respectively. White Pine’s total acreage is 5,693,255. Just under half the land is grassland (48%). 41% of the land is shrubland, while the remaining land is divided into 6% forest, 0.1% mixed cropland, 0.1% water, 0.3% urban, and 2% other.

Federal Land Payments:

Total federal payments were fluctuating from 2003 until 2008, when total federal payments shot up to \$2M. Total payments have been over \$2M ever year since then, except for 2016 when payments went down, then they went back up the next year. Payments continue to fluctuate over the years, but PILT remains to receive the most while mineral royalties receive the least.

Taxation:

The Consolidated Tax Distribution in White Pine has remained mostly the same from 2010 to 2021. There was fluctuation up and down throughout the years, but no radical changes. The only noticeable change that can be seen is when GST rose above \$1M in 2016, and it’s remained above ever since. The Taxable Sales in White Pine County display a slight wavy pattern from 2006 to 2021. The sales can be seen rising for a couple years then decreasing years after, only to rise again. The rise and falls are not drastic, except in 2012 when taxable sales rose to its peak \$542,642,355. Years after the taxable sales got back down to where they were in 2006, then sales caught the wave and started to rise back up.

Gaming:

Gaming Win in White Pine County has grown from 2010 to 2021. However, there was fluctuation up and down throughout the eleven years. Gaming Win hovered around \$9M for most of the years, there are some highs and lows to note though. In 2012 Gaming Win was over \$10M, then in 2020 it was at a low \$7M. The low in 2020 can be contributed to the pandemic and shutting most places down.

## Land Management

### Definition

Land management is the amount of land managed by entities or individuals.

### Why is it important?

Parties from both the government and the private sector are continually interested in obtaining and expanding property. Land use then helps paint a possible picture to all types of development: housing and residential, business and commercial, industrial, recreational, or anything government-based such as construction involved with roads or utilities. The necessary entity may be consulted for further inquiry regarding availability, accuracy, and purchasing, but the land ownership data itself should act as a baseline for further analyses such as GIS mapping.

Table 110. White Pine Land Management, 2021

Land Manager	Acres	Percentage
<b>BLM</b>	4,495,163	79.0%
<b>Department of Defense</b>	0	0.0%
<b>US Forest Service</b>	786,023	13.8%
<b>US Fish and Wildlife</b>	13,131	0.2%
<b>National Park Service</b>	77,086	1.4%
<b>Other Federal</b>	0	0.0%
<b>Tribal</b>	73,673	1.3%
<b>State</b>	7,990	0.1%
<b>City/County/Other/Private</b>	240,186	4.2%
<b>Total Acreage</b>	5,693,252	100.0%

### County Breakdown

Land Management in White Pine County is broken up by several different categories, where BLM owns the majority of land at 79%. For comparison, US Forest Service, is accounting for 13.8% of the acreage and the City/County/Other/Private Lands is accounting for 4.2% of the total acres as well. The National Park Service and Tribal are the other Land Management groups owning a percentage of acres with 2.7% and 0.3% owned respectively.

Figure 105. White Pine Percent Distribution of Land Management, 2021

## Land Coverage

### Definition

Land coverage is the type of land which makes up the county.

### Why is it important?

Land coverage data is useful for companies and government institutions interested in businesses and programs that are dependent on a given type of land. Urban development, for example, may not require an urban land, but might better be performed on grassland or shrubland compared to forest. Along those same lines, forest coverage might be indicative of an all-around more permanent coverage. Tourism also may be affected by the type of land. In any case, land ownership data should be consulted, as well as the individual owners themselves, if further inquiry is necessary. Further analysis, such as that with GIS mapping, should be conducted to get the best scope.

Table 111. White Pine Type of Land Coverage, 2006

2006	
<b>Total Area (Acres)</b>	5,693,255
<b>Forest</b>	6.0%
<b>Grassland</b>	48.0%
<b>Shrubland</b>	41.0%

Source: NASA MODIS Land Cover Type Yearly L3 Global 1km MOD12Q1, 2006, as reported by Headwaters Economics' Economic Profile System ([headwaterseconomics.org/eps](http://headwaterseconomics.org/eps))

### County Breakdown

White Pine's total acreage is 5,693,255. Just under half the land is grassland (48%). 41% of the land is shrubland, while the remaining land is divided into 6% forest, 0.1% mixed cropland, 0.1% water, 0.3% urban, and 2% other.

For comparison, Humboldt County is comprised of a near-split of shrubland and grassland. There is a very small percent of mixed cropland, forest, and water. In Lincoln County two-thirds of the land in the county is shrubland. Just over one-fourth of the county is covered in grasslands. Between Shrubland and grassland, 93% of the county is comprised between shrubland and grassland, leaving 3% to forest and 3% to other, with a minimal of 0.3% in urban coverage. Almost two-thirds of Elko County is grassland (60.0%). Over one-third is shrubland (35.0%). The remaining five percent of the county is split into small percentages of forest, mixed cropland, water, and urban. Similar to Esmeralda's distribution, Nye County is 60% shrubland, and 29% grassland. Eureka County is split into 52% grassland and 42% shrubland.

Figure 106. White Pine Distribution of Land Coverage, 2006

## Federal Land Payments

### Definition

Federal payments are payments that compensate state and local governments for non-taxable federal lands within their borders. Payments are funded by federal appropriations (e.g., PILT) and from receipts received by federal agencies from activities on federal public lands (e.g., timber, grazing, and minerals). For a further definition on fish and wildlife, forest service, mineral royalties, or PILT, please see Appendix A: Glossary.

### Why is it important?

Monies for each receiver are for reporting, budgeting, and projecting reasons. Entities might be interested in the abundance of certain county resources (e.g. Minerals).

Table 112. White Pine Total Federal Land Payment and Distribution by Origin, 2019

2019	
<b>Total Federal Land Payments</b>	\$2,036,933
<b>PILT</b>	67.1%
<b>Forest Service Payments</b>	25.6%
<b>BLM Payments</b>	6.9%
<b>USFWS Refuge Payments</b>	0.3%
<b>Federal Mineral Royalties</b>	0.0%

All amounts shown in 2021 dollars

Figure 107. White Pine Distribution of Federal Land Payments by Origin, 1986 to 2019

### County Breakdown

Total federal payments were fluctuating from 2003 until 2008, when total federal payments shot up to \$2M. Total payments have been over \$2M ever year since then, except for 2016 when payments went down, then they went back up the next year. Payments continue to fluctuate over the years, but PILT remains to receive the most while mineral royalties receive the least.

Table 113. White Pine Federal Land Payments by Origin of Payment, 2003 to 2019

Year	PILT	Forest Service	BLM	Fish and Wildlife	Mineral Royalties	Total Federal Payment
2003	\$910,218	\$56,271	\$0	\$0	\$0	\$966,489
2004	\$914,564	\$55,710	\$26,075	\$0	\$0	\$996,349
2005	\$861,264	\$55,189	\$26,263	\$0	\$0	\$942,716
2006	\$887,982	\$53,759	\$33,722	\$7,678	\$1,241	\$984,382

## Distribution of Federal Land Payments

### Definition

Distribution of Federal Land Payments shows the distribution of funds to certain state/local entities. For a further definition on County Government, Grazing Districts, Local School District, Resource Advisory Council, and State Government, please see Appendix A: Glossary.

### Why is it important?

The distribution of federal land payments to certain sectors shows how the money is spent. Future projects and remodeling of the government structure is dependent on how effective past projects were funded while budgets were met.

Table 114. White Pine Total Federal Land Payment and Distribution by Receiving Entity, 2019

2019	
<b>Total Federal Land Payments</b>	<b>\$2,036,933</b>
<b>State Government</b>	<b>0.0%</b>
<b>County Government</b>	<b>81.0%</b>
<b>Local School Districts</b>	<b>10.9%</b>
<b>RACs</b>	<b>2.0%</b>
<b>Grazing Districts</b>	<b>6.0%</b>

Sources: See below table.

All amounts shown in 2021 dollars

Figure 108. White Pine Distribution of Federal Land Payments by Local Entity, 1986 to 2019

### County Breakdown

In 2009 a major increase in payments can be seen in every area except State Government. After the peak in 2008 School Districts and RACs funding gradually dropped hitting a low in 2016. Payments rose back up in 2017 but since then payments seem to be on a steady decline in every area.

Table 115. White Pine Distribution of Federal Land Payments to Local Entities, 2003 to 2019

Year	State Government	County Government	School Districts	RACs*	Grazing Districts	Total Federal Payment
2003	\$0	\$938,354	\$28,136	\$0	\$0	\$966,490
2004	\$0	\$943,702	\$27,855	\$0	\$24,792	\$996,349
2005	\$0	\$889,742	\$27,594	\$0	\$25,380	\$942,716
2006	\$0	\$925,134	\$26,879	\$0	\$32,369	\$984,382
2007	\$0	\$905,332	\$26,199	\$0	\$21,786	\$953,317
2008	\$0	\$1,713,433	\$344,163	\$64,784	\$18,739	\$2,141,119
2009	\$0	\$1,735,989	\$315,422	\$59,373	\$110,361	\$2,221,145

## Consolidated Tax Distribution Overview

Many taxes in Nevada are collected at the local level and are remitted to the State of Nevada for distribution. The Consolidated Tax Distribution (commonly referred to as 'CTX') takes six of the most commonly collected taxes at the county and redistributes the funds back to the local level.

The CTX is a complicated process. This document will attempt to explain some high-level aspects of CTX, but should not be considered an in-depth resource. Please contact the Nevada Department of Taxation for guidance.

### CTX Beginnings

The CTX was passed in the 1997 Nevada Legislature, SB 254, first taking effect in fiscal year 1999. This combined six major taxes into one revenue source for redistribution.

- Government Services Tax (GST)
- Real Property Transfer Tax (RPTT)
- Liquor Tax
- Cigarette Tax
- Supplemental City-County Relief Tax (SCCRT)
- Basic City-County Relief Tax (BCCRT)

CTX collections, allocations, and distributions are regularly changed via bills passed through the Nevada Legislature.

Details may be found in the Nevada Revised Statutes (NRS) 360.600 through 360.740.

### Distribution Types

Each tax type has unique distribution rules and formulas which are applied, however there are three main types of distribution:

- Population-Based
- Point of Origin
- Guaranteed Counties

### Population-Based

Population-Based distribution combines all collected taxes of that component and redistributes back to the counties per the ratio of population.

***Example:** Per the 2020 decennial census, Lyon County had a population of 59,235 with Nevada's total population being 3,104,614. This translates to roughly 1.908%. For those CTX components which are population-based, Lyon County would receive 1.908% of the total Nevada collection. (Actual population used is the number certified by the governor each year.)*

Population-based components of the CTX include liquor, cigarette, and part of the BCCRT.

### Point of Origin

Point of Origin distribution is the simplest of the methods. It simply takes the amount collected in a county for a component and gives that same amount back to the county.

Point of origin components include the Government Services Tax, Real Property Transfer Tax, and parts of both the BCCRT and SCCRT.

### Guaranteed Counties

Guaranteed County distribution is solely used in the SCCRT component. Please see a detailed discussion on the CTX Distribution Details page.

## CTX Components

### **Government Services Tax**

The Government Services Tax (GST) is collected by the Department of Motor Vehicles and was previously referred to as the Motor Vehicle Privilege Tax. It is based on the value of the vehicle at time of registration.

The full portion of this CTX component is distributed back to the county of origin.

Details can be found in NRS 482.180 and 482.181.

### **Real Property Transfer Tax**

The Real Property Transfer Tax (RPTT) is the tax paid on real property transfers within each county. Broadly, real property includes the physical land owned and everything permanently attached to it, natural or artificial, and the rights of ownership of real estate.

Examples include mineral rights below the earth's surface, trees growing, and fences and building on the land.

The rate for 14 of the 17 counties for this tax is \$1.95 for each \$500 of value or fraction thereof if the value is over \$100. Washoe and Churchill Counties add \$0.10 to this rate while Clark County adds \$0.60 to the rate.

The **CTX only takes a portion of total RPTT**, equal to \$0.55 per \$500 of value.

The full portion of this CTX component is distributed back to the county of origin.

Details can be found in NRS 375.

### **Liquor Tax**

Liquor taxes are collected on any beverage over one-half of one percent of alcohol by volume. Beers are taxed at \$0.16 per gallon with other alcoholic beverages taxed at rates increasing based on alcohol percentage.

The **CTX only takes a portion of all liquor taxes**, specifically only those beverages at 22% or greater alcohol by volume. From these beverages \$0.50 per gallon is taken and redistributed to the counties.

The full portion of this CTX component is distributed to the counties on the basis of population.

Details can be found in NRS 369.173.

### **Cigarette Tax**

Cigarette and tobacco products are taxed by the state. Cigarettes are taxed at a rate of \$1.80 per pack of 20. Other tobacco products are taxed at 30% of wholesale price.

The **CTX only takes a portion of cigarette taxes**, equal to \$0.10 per pack of 20.

The full portion of this CTX component is distributed to the counties on the basis of population.

Details can be found in NRS 370.260.

### **Basic City-County Relief Tax**

The Basic City-County Relief Tax (BCCRT) is one-half of one percentage point of the state's 6.85% sales/use tax rate.

For in-state sales, this CTX component is distributed back to the county of origin. For out-of-state companies, distribution is based on county population.

### **Supplemental City-County Relief Tax**

The Supplemental City-County Relief Tax (SCCRT) is 1.75 percentage points of the state's 6.85% sales/use tax rate.

SCCRT is distributed to the counties on a formula including both guaranteed counties and point-of-origin.

SCCRT is first distributed to the guaranteed counties. The remaining amount is then distributed to the remaining counties based on percentage of the in-state collections.

Details can be found in NRS 377.057.

## CTX Distribution Details

### Guaranteed Counties

Guaranteed County distribution is only used as part of the SCCRT calculations. A guaranteed county is allocated a set dollar figure to receive each year for that component.

The total guaranteed dollar figure statewide changes year-to-year, based on the lesser of:

1. The previous year's figure and adding a percentage based on a combination of the change of the county population and change in the Consumer Price Index (CPI) or
2. Average statewide SCCRT collections from the prior two years

**Example:** If the calculated percentage change including CPI and percent in population were 2% but statewide collections of SCCRT grew 1% over the past two years, then the guaranteed county dollar figure would raise by the lesser amount, 1%.

If a county collects 10% more than the guaranteed distribution amount over a full 12-month period, that county will transition to being a point of origin county, unless a waiver is filed by the county and granted by the Nevada Tax Commission.

As of Fiscal Year 2022 there are eight guaranteed counties: Douglas, Esmeralda, Lander, Lincoln, Lyon, Mineral, Pershing, and White Pine. Douglas and Lyon Counties will be transitioning to become point of origin counties in FY 2023 after meeting the transition requirements and not filing waivers in early 2022.

### SCCRT Distribution Examples

**Example 1:** In FY 2021 Esmeralda County was guaranteed to receive \$99,974.71 in SCCRT distribution monthly no matter the total amount collected in a single month.

**Example 2:** In June 2021, Carson City collected \$2,297,235.01 in SCCRT, 2.4466% of the total \$93,895,031.06 collected in-state by the nine point-of-origin counties that month. After accounting for guaranteed counties, out-of-state SCCRT collections, and the general fund commission, Carson City was distributed \$2,716,583.20 (2.4466% of the remaining \$111,035,075.97).

### Tier 1 vs Tier 2 Distribution

Once all six components are determined and allocated among the 17 counties the total consolidated tax is distributed. First is the Tier 1 distribution, which is the full allocation to a county's Local Government Tax Distribution account.

Tier 2 distribution is the allocation of the Tier 1 funds to the county and the cities, towns, and special districts within the county.

The amounts to each jurisdiction change from county to county and may change year-to-year based on various formulas

### Tier 2 Jurisdictions for White Pine

Below is a listing of all local governments, enterprise districts, and special districts which are allocated CTX funding for this county:

#### Local Governments:

- White Pine County
- Ely
- Lund
- McGill
- Ruth

#### Enterprise and Special Districts:

- White Pine Hospital District

## Consolidated Tax Distribution

### Definition

The Consolidated Tax Distribution takes six common taxes collected in Nevada and redistributes these to the counties. An in-depth explanation of the CTX are in the preceding pages.

### Why is it important?

The CTX distribution goes to counties, cities, towns, enterprise districts, and special districts across the state, totaling over \$1 billion statewide annually. The steady nature of the CTX redistribution alleviates issues caused in smaller population counties caused by boom/bust cycles of industry (ex. Mining) and outlier years of high or low tax income.

### County Breakdown

The Consolidated Tax Distribution in White Pine has remained mostly the same from 2010 to 2021. There was fluctuation up and down throughout the years, but no radical changes. The only noticeable change that can be seen is when GST rose above \$1M in 2016, and it's remained above ever since.

Table 116. White Pine Consolidated Tax Breakdown, Fiscal Year 2010 to 2021

Fiscal Year	BCCRT	SCCRT	CIGARETTE	LIQUOR	RPTT	GST	TOTAL
FY 2010	\$920,201	\$3,708,309	\$52,161	\$13,591	\$26,570	\$938,944	\$5,659,775
FY 2011	\$1,626,030	\$3,149,106	\$49,067	\$13,753	\$36,135	\$944,353	\$5,818,444
FY 2012	\$1,414,929	\$2,828,370	\$46,342	\$14,194	\$26,716	\$890,818	\$5,221,369
FY 2013	\$1,332,015	\$2,866,511	\$47,749	\$14,217	\$35,748	\$857,243	\$5,153,482

## Taxable Sales

### Definition

Taxable sales are the total sales of taxable goods and services for all the county's businesses.

### Why is it important?

Sales tax is key for measuring government income on business transactions. Not only does a high sales tax hint at government revenue and the general relationship between government and commerce, but a high sales tax also indicates the county's ability to contribute to the overall production and expansion of wealth.

### County Breakdown

The Taxable Sales in White Pine County display a slight wavy pattern from 2006 to 2021. The sales can be seen rising for a couple years then decreasing years after, only to rise again. The rise and falls are not drastic, except in 2012 when taxable sales rose to its peak \$542,642,355. Years after the taxable sales got back down to where they were in 2006, then sales caught the wave and started to rise back up.

Table 117. White Pine Taxable Sales, Fiscal Year 2006 to 2021

Year	Taxable Sales*
<b>FY 2006</b>	\$226,540,474
<b>FY 2007</b>	\$243,215,265

## Ad Valorem

### Definition

Ad Valorem is a tax whose amount is based on the value of a transaction or of property, rather than on quantity or intrinsic value. In the State of Nevada, ad valorem most commonly refers to property taxes. For a further definition on Net Proceeds from Mines, please see Appendix A: Glossary.

### Why is it important?

Ad Valorem is an important measure for property owners who are interested in overall value. Since this data is captured as a whole, the year-to-year change can be used to mark general trends that may then be applied to forecasts and planning with regards to all types of property.

### County Breakdown

Overall Total Assessed Valuation has increased from 2010 to 2021 in White Pine. Assessed Valuation was consistently increasing up until 2016 when it took a dip down, then in 2019 numbers rose back up. The Net Proceeds Mines dropped down low in 2014 and went down even lower in 2012. Then the following year in 2013 they jump back up over \$100,000.

Table 118. White Pine Ad Valorem, FY 2010 to FY 2021

Fiscal Year	Assessed Valuation*	Net Proceeds: Mines*	Total Assessed Valuation*
FY 10	\$264,506	\$14,142	\$278,648
FY 11	\$264,427	\$174,979	\$439,406

## Cannabis Taxable Sales

Table 119. White Pine Cannabis Taxable Sales, FY 2019 to FY 2021

Fiscal Year	Clark*	Washoe*	All Other*
FY 19	\$539,769	\$98,631	\$33,203
FY 20	\$556,865	\$102,522	\$52,118
FY 21	\$791,100	\$135,327	\$77,041

Source: Nevada Department of Taxation

\*Shown in thousands of 2021 dollars.

### County Breakdown

In only four years of legalization total taxable sales has seen a consistent increase. Statewide sales topped over \$1 billion in FY 2021.

Figure 112. White Pine Cannabis Taxable Sale, FY 2019 to FY 2021

### Definition

Cannabis taxable sales includes sales of adult-use cannabis, medical cannabis, tangible personal property transferred for value, and all other amounts subject to Sales or Use Tax, as reported by licensed cannabis establishments.

Cannabis taxation is reported by county only for those regions with three or more reporting entities to protect taxpayer information. Due to this only Clark and Washoe Counties are reported separately.

### Why is it important?

Cannabis has both recreational and medical uses. Cannabis sales has seen a meteoric rise in its short amount of time of legalization. Indoor agriculture has been one of Nevada's fastest growing sectors as well. When comparing 2015 (pre-legalization) to 2022, total jobs in crop production have nearly tripled across Nevada.

### Legalization of Marijuana in Nevada

The earliest medical marijuana legalization initiatives took place in 2000 and 2001, however those laws did not have a provision for patients to obtain medical marijuana other than by growing it themselves. In 2013, the Legislature approved SB 374 authorizing the first medical marijuana establishments, which took effect on April 1, 2014.

In 2016, Nevada voters approved Ballot Question 2 resulting in legalization of the purchase, possession, and consumption of recreational marijuana, taking effect January 1, 2017. Nevada became the eighth state to legalize recreational marijuana.

See NRS 453 and 678 for more details regarding medical marijuana and recreational cannabis respectively.

## Cannabis Taxation

### Definition

Cannabis is taxed at two separate rates. At the wholesale level, cannabis is taxed at a 15% rate, which includes adult-use recreational cannabis as well as medical marijuana. At a retail level, adult-use recreational cannabis is taxed at a 10% rate.

Cannabis taxation is reported by county only for those regions with three or more reporting entities, to protect taxpayer information. Due to this only Clark and Washoe Counties are reported separately.

### Why is it important?

Originally the 15% wholesale tax was directed to be deposited into the state Distributive School Account (DSA). In 2019 SB 545 was signed directing both the wholesale 15% tax and the 10% retail tax to be directed into the DSA.

### County Breakdown

With the ever-growing cannabis industry, tax revenues have grown steadily over the first years of legalization. In FY 2021 over \$150 million were collected in wholesale and retail taxes with all of those funds being deposited into the Distributive School Account.

Table 120. White Pine Cannabis Wholesale Taxes, FY 2019 to FY 2021

## Gaming Win

### Definition

Total gaming win is the total amount won by gaming establishments on a variety of gaming activities. These include Table, Counter, and Card games, Slot Machines, and Race and Sports Book bets.

### Why is it important?

Total gaming win shows the amount of activity in gambling establishments across Nevada. Gaming is possibly Nevada's most known feature worldwide and accounts for approximately one-fourth of all employment across the state.

### County Breakdown

Gaming Win in White Pine County has grown from 2010 to 2021. However, there was fluctuation up and down throughout the eleven years. Gaming Win hovered around \$9M for most of the years, there are some highs and lows to note though. In 2012 Gaming Win was over \$10M, then in 2020 it was at a low \$7M. The low in 2020 can be contributed to the pandemic and shutting most places down.

Table 122 White Pine Gaming Win Collected, FY 2010 to FY 2021

Fiscal Year	Gaming Win
FY 10	\$9,140,731
FY 11	\$9,992,747
FY 12	\$10,597,908
FY 13	\$9,457,780
FY 14	\$9,195,714
FY 15	\$9,118,584
FY 16	\$8,516,751
FY 17	\$8,001,110
FY 18	\$8,867,930
FY 19	\$9,322,128
FY 20	\$7,119,760
FY 21	\$10,878,208

\*Shown in 2021 dollars.

Figure 114. White Pine Gaming Win Collected, FY 2010 to FY 2021, Index FY 2010 = 100

## Gaming Taxes

### Definition

Gaming taxes, as known as Percentage Fee Collections, are taxes on gambling income, which is any income that is the result of games of chance or wagers on events with uncertain outcomes.

### Why is it important?

Gambling taxes indicate gambling activity. This data is especially important in Nevada for its strength in tourism and gambling. When planning to implement or alter casinos, neighboring counties or counties that share similar overall models will find use of the year-to-year trends in gaming taxes.

Table 123. White Pine Percentage Fee Collections, FY 2010 to FY 2021

Fiscal Year	Percentage Fee Collections
FY 10	\$455,727
FY 11	\$500,603
FY 12	\$550,123
FY 13	\$398,370
FY 14	\$455,403
FY 15	\$434,446
FY 16	\$394,167
FY 17	\$360,063
FY 18	\$430,030
FY 19	\$440,632
FY 20	\$232,109
FY 21	\$687,819

Source: Nevada Gaming Control Board

\*Shown in 2021 dollars.

### County Breakdown

Percentage Fee Collection has increased in White Pine from 2010 to 2021. A wavy pattern can be seen taking shape over the years as collections rise and then fall. The waves aren't major, except in 2020 when Percentage Fee Collections dropped to \$232,109 then in 2021 it jumped back up to \$687,819.

Figure 115. White Pine Percentage Fee Collections, FY 2010 to FY 2021, Index 2010 = 100

## Live Entertainment Taxes in Gaming Establishments

### Definition

The live entertainment tax (LET) is a 9% tax imposed throughout Nevada for live entertainment, defined as any activity provided for pleasure, enjoyment, recreation, relaxation, diversion or other similar purpose by a person or persons who are physically present when providing an activity to a patron or group of patrons who are physically present.

### Why is it important?

With Nevada's longstanding history as an entertainment capital, the live entertainment tax can be a major source of revenue. While there are some exclusions to this tax, those are largely athletic events held by a Nevada-based home team. Due to this, most concerts, comedy acts, and more, qualify.

### Reporting Entities

LET is collected by both the Gaming Control Board and the Department of Taxation. The Gaming Control Board collects LET from venues within gaming establishments while the Department of Taxation collects LET in all other cases.

Unfortunately, the Department of Taxation does not publish LET data by county, giving only a statewide dollar figure.

Comparing the two statewide totals, those collected by the Gaming Control Board are greater every year. In FY 2019, the last non-pandemic affected totals, the Gaming Control Board collected over \$110 million in LET while the Department of Taxation collected \$27 million (both in 2021 dollars).

## Appendix

## **Appendix A: Glossary**

This document is a collection of primary and secondary data collected by a variety of sources. Some of the terminology, processes, and ways of viewing the data may be foreign to the reader.

You can find definitions of many terms used throughout the report over the next few pages.

## Glossary A-C

### **Accountability Year**

School Districts may report data in a current year for items that occurred in a previous calendar year. For instance, graduation rates read as the 2017-2018 accountability year are the rates for the 2016-2017 graduating class.

### **Ad Valorem**

Literally translating to "according to value" in Latin, is a tax whose amount is based on the value of a transaction or of property. In the State of Nevada, ad valorem most commonly refers to property taxes.

### **Ad Valorem: Net Proceeds from Mines**

The Nevada Net Proceeds of Minerals Tax is an ad valorem property tax assessed on minerals mined or produced in Nevada when they are sold or removed from the state. With the exception of sand and gravel, the tax applies to all metals, minerals, gemstones, oil and natural gas, and geothermal energy. This tax is separate from, and in addition to, any property tax paid on land, equipment and other assets.

### **Administrator (School District)**

A person who spends at least 50 percent of his or her work year supervising other staff or licensed personnel, or both, and who is not classified by the board of trustees of the school district as a professional-technical employee.

### **Asset Mapping**

Asset mapping is a community process that provides information about the strengths and resources of a community and can help uncover solutions. Once community assets are inventoried and collected, asset mapping displays those strengths. Asset mapping can be displayed in numerous forms allowing a community to more easily think about and visualize how to build on those assets to address community needs (Green and Haines 1997).

### **Average Earnings by Worker (Industry-Annual)**

Also called "Current Total Earnings", this is the total industry earnings for a region divided by number of jobs.

### **Average Earnings per Worker (Occupation-Hourly)**

The hourly earnings for occupations. Occupations have hourly earnings for five percentiles (10th, 25th, 50th [median], 75th, and 90th) as well as the average.

### **Community**

People who live within a geographically defined area and who have social and psychological ties with each other and with the place where they live. (Mattessich and Monsey 2004: 56<sup>1</sup>)

### **Community Assets**

Community assets are anything that can improve the quality of life in community. Community assets are the collective resources which communities and individuals have at their disposal; those which can be leveraged to develop effective solutions to promote social inclusion and well-being of citizens. (Kretzmann and McKnight 1993, Green and Haines 1997).

### **Community Capital(s)**

Capital is any type of resource capable of producing additional resources. When those resources or assets are invested to create new resources, they become capital (Flora, Flora & Fey 2004<sup>2</sup>: 9). Community capitals represent assets in all aspects of community life. There are commonly seven community capitals, financial, political, social, human, cultural, natural and built. If successful communities can learn to leverage their capitals in useful ways, they become more vibrant and economically resilient (Flora, Flora & Gasteyer 2015<sup>3</sup>).

### **County Government (Distribution of Federal Land Payments)**

Consist of: (1) PILT; (2) portions of Forest Service payments including Secure Rural Schools and Community Self-Determination Act (SRS) Title I and Title III, 25% Fund, and Forest Grasslands; (4) BLM Bankhead-Jones; (4) USFWS Refuge revenue sharing; and (5) discretionary state government distributions of federal mineral royalties where these data are available.

<sup>1</sup> Mattessich, P. and Monsey, M. (2004). *Community Building: What Makes It Work*, St Paul, MN: Wilder Foundation.

<sup>2</sup> Flora, C., Flora, J., & Fey, S. (2004). *Rural Communities: Legacy and Change*, 2<sup>nd</sup> Edition. Boulder, CO: Westview Press.

<sup>3</sup> Flora, C., Flora, J., and Gasteyer, S. (2015) *Rural Communities: Legacy + Change*, 5<sup>th</sup> Edition. Routledge, Taylor and Francis Group: New York.

## Glossary D-F

### **Demand**

Demand is an estimate of the amount of goods and services that all industries require from a given industry, whether domestic or international, in order to remain in operation. The value is calculated based on industry purchases across the nation, measured in terms of sales. Industry wages, taxes, and other values added payments are indirectly part of the demand through the production of the supplying industry.

### **Distribution of Federal Land Payments**

How public land is owned and how that land is used changes how funds are distributed and to which state/local entities.

### **Dividends (Personal Income)**

A form of property income received by shareholders in return for their investment in the equity of a corporation.

### **Earnings**

Remuneration (pay, wages) of a worker or group of workers for services performed during a specific period of time. The term usually carries a defining word or phrase, such as straight-time average hourly earnings.

### **Employed**

Employed includes all civilians 16 years old and over who were either (1) "at work" -- those who did any work at all during the reference week as paid employees, worked in their own business or profession, worked on their own farm, or worked 15 hours or more as unpaid workers on a family farm or in a family business; or (2) were "with a job but not at work" -- those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons

### **Engagement (Public Voice)**

Engagement is a dynamic relational process that facilitates communication, interaction, involvement and exchange between an organization and a community for a range of societal and organizational outcomes. At its most simple level engagement implies a two-way process involving interaction and listening, with the goal of generating mutual benefit among communities, decision makers and institutions of higher education.

### **Exported Sales**

The given industry's total annual sales to industries and consumers not inside the defined region. In this report that is most commonly (if not always) the county.

### **Exports**

Exports show the amount of money that is spent by industries located outside the region in exchange for goods or services produced by an industry located in the region.

### **Family**

A group of two or more people who reside together and who are related by birth, marriage, or adoption.

### **Family Income**

This includes the income of the householder and all other individuals 15 years old and over related to the householder.

### **Federal Land Payments**

These are federal payments that compensate state and local governments for non-taxable federal lands within their borders. Payments are funded by federal appropriations (e.g., PILT) and from receipts received by federal agencies from activities on federal public lands (e.g., timber, grazing, and minerals).

### **Federal Land Payments: Bureau of Land Management (BLM)**

The BLM shares a portion of receipts generated on public lands with state and local governments, including grazing fees through the Taylor Grazing Act and timber receipts generated on Oregon and California (O & C) grant lands.

### **Fiscal Year**

The State of Nevada fiscal year runs July 1 - June 30. The federal fiscal year runs October 1 - September 30.

### **Fish and Wildlife (Federal Land Payments)**

These payments share a portion of receipts from National Wildlife Refuges and other areas managed by the USFWS directly with the counties in which they are located.

### **Forest Service (Federal Land Payments)**

These are payments based on USFS receipts and must be used for county roads and local schools. Payments include the 25% Fund, Secure Rural Schools & Community Self-Determination Act, and Bankhead-Jones Forest Grasslands.

### **Free and Reduce Lunch (FRL)**

Students who are from households that qualify by income to receive free or reduced-price lunch at their school.

## Glossary G-J

### **Government Social Insurance (Personal Income)**

Consists of the contributions or payments for the following government programs: old-age, survivors, and disability insurance (Social Security); hospital insurance (Medicare Part A); supplementary medical insurance (Medicare Parts B and D); unemployment insurance; railroad retirement; veterans' life insurance; and temporary disability insurance.

### **Graduation Rate**

The rate at which 9th graders graduate by the end of the 12th grade (i.e., the number of students who graduate in four years with a regular high school diploma divided by the number of students who form the adjusted cohort for the graduating class).

### **Grazing Districts (Distribution of Federal Land Payments)**

Consist of BLM Taylor Grazing Act payments.

### **Gross Regional Product (GRP)**

Gross Regional Product measures the final market value of all goods and services produced in a region.

### **Household**

A household includes all the people who occupy a housing unit as their usual place of residence

### **Household Income**

This includes the income of the householder and all other individuals 15 years old and over in the household, whether they are related to the householder or not

### **Housing Unit**

A house, an apartment, a mobile home or trailer, a group of rooms, or a single room occupied as separate living quarters, or if vacant, intended for occupancy as separate living quarters.

### **Imports**

Imports show the amount of money that is spent by all industries located in the region in exchange for goods or services produced by an industry located outside the region. Money leaves the region, and a good or service is brought into the region and consumed. Imports can be foreign or domestic.

### **Individualized Education Program (IEP)**

A written statement for each child with a disability that is receiving special education services that is developed and reviewed by the IEP Team. (From IDEA)

### **Industry**

A group of businesses that produce similar goods and services, and share similar production processes for creating the goods and services they sell. Industries are classified using NAICS codes.

### **Industry: Non-Service Related**

Non-Services Related Industries include each of the following 2-Digit NAICS Sectors: 22, 42, 44-45, 48-49, 51, 52, 53, 54, 55, 61, 62, 71, 72, and 81

### **Industry: Public Administration**

Public Administration Industry includes NAICS Sector 90

### **Industry: Service Related**

Services Related Industries include each of the following 2-Digit NAICS Sectors: 11, 21, 23, and 31-33

### **In-Region Sales**

The given industry's total annual sales to industries and consumers inside the defined region. In this report that is most commonly (if not always) the county.

### **Instruction Support Funding (School District)**

Funding for guidance and counseling, libraries and media, extracurricular activities, student health services, curriculum development, staff development, sabbaticals, program management, therapists, psychologists, evaluators, personal attendants, and social workers

### **Instructional Funding (School District)**

Funding for instructional teachers, substitute teachers, instructional paraprofessionals, pupil-use technology, software, instructional materials, trips and supplies.

### **Interest (Personal Income)**

A form of property income received by the owners of certain kinds of financial assets (such as deposits, debt securities, and loans) in return for their investments in those assets.

### **Job**

A job is any position in which a worker provides labor in exchange for monetary compensation. This includes those who work as employees for businesses (a.k.a. "wage and salary" employees) and proprietors who work for themselves.

## Glossary L-P

### **Leadership Funding (School District)**

Funding for principals, assistant principals, administrative support, deputies, senior administrators, researchers, program evaluators, superintendents, school board representatives, and legal staff.

### **Local School District (Distribution of Federal Land Payments)**

Consist of portions of SRS Title I, 25% Fund, and Forest Grasslands.

### **Mean**

This measure represents an arithmetic average of a set of numbers.

### **Median**

This measure represents the middle value (if n is odd) or the average of the two middle values (if n is even) in an ordered list of data values.

### **Mineral Royalties (Federal Land Payments)**

These payments are distributed to state governments by the U.S. Office of Natural Resources Revenue. States may share, at their discretion, a portion of revenues with the local governments where royalties were generated.

### **Occupation**

Occupation describes the kind of work the person does on the job. For employed people, the data refer to the person's job during the reference week. For those who worked at two or more jobs, the data refer to the job at which the person worked the greatest number of hours.

### **Occupation: High Level Aggregation**

The Standard Occupational Classification Manual approves higher-level aggregation of SOC major groups to present data in a more condensed manner. In this report, the High-Level aggregation to six groups is used

### **Occupation High Level Aggregation: 1**

This High-Level aggregation includes SOC major groups: 11-29

### **Occupation High Level Aggregation: 2**

This High-Level aggregation includes SOC major groups: 31-39

### **Occupation High Level Aggregation: 3**

This High-Level aggregation includes SOC major groups: 41-43

### **Occupation High Level Aggregation: 4**

This High-Level aggregation includes SOC major groups: 45-49

### **Occupation High Level Aggregation: 5**

This High-Level aggregation includes SOC major groups: 51-53

### **Occupation High Level Aggregation: 6**

This High-Level aggregation includes SOC major group: 55

### **Operations Funding (School District)**

Funding for transportation, food service, safety, building upkeep, utilities, building maintenance, data processing, and business operations.

### **Other Staff (School District)**

All persons who are not reported as administrators or teachers, including, without limitation: School counselors, school nurses and other employees (who spend at least 50 percent of their work year providing emotional support, noninstructional guidance or medical support to pupils), Noninstructional support staff, including, without limitation, janitors, school police officers and maintenance staff; and Persons classified by the board of trustees of the school district as professional-technical employees, including, without limitation, technical employees and employees on the professional-technical pay scale.

### **Payment in Lieu of Taxes (PILT) (Federal Land Payments)**

These payments compensate county governments for non-taxable federal lands within their borders. PILT is based on a maximum per-acre payment reduced by the sum of all revenue sharing payments and subject to a population cap.

### **Per Capita Income**

Average obtained by dividing aggregate income by total population of an area.

## Glossary P-R

### **Personal Current Transfer Receipts (Personal Income)**

Receipts of persons from government and business for which no current services are performed. Current transfer receipts from government include Social Security benefits, medical benefits, veterans' benefits, and unemployment insurance benefits. Current transfer receipts from business include liability payments for personal injury and corporate gifts to nonprofit institutions.

### **Personal Income**

Income received by persons from all sources. It includes income received from participation in production as well as from government and business transfer payments.

### **Personal Income: Adjustment for Residence**

An adjustment made to those components of earnings and employee contributions to social insurance programs (income subject to adjustment) that are reported on a place-of-work basis to convert them to a place-of-residence basis reflecting the net flow of income of inter-area commuters. For example, the source data for county wages and salaries represent the wages paid by the establishments located in that county. The wages and salaries that the establishments of a given county pay to workers who live outside that county are treated as an outflow and the wages and salaries that the residents of that county receive from establishments located outside that county are treated as an inflow. The adjustment for residence for a county, then, is the net of the inflows to that county and the outflows from that county.

### **Proprietor's Income (Personal Income)**

Proprietors' income with inventory valuation and capital consumption adjustments is the current-production income (including income in kind) of sole proprietorships, partnerships, and tax-exempt cooperatives. Corporate directors' fees are included in proprietors' income. Proprietors' income includes the interest income received by financial partnerships and the net rental real estate income of those partnerships primarily engaged in the real estate business.

### **Qualitative Data**

Qualitative data is descriptive data that can be observed but difficult to measure. On a conceptual level, qualitative data is concerned with understanding human behavior from an informant's perspective. Qualitative research is multimethod in focus, involving an interpretive naturalistic approach to its subject matter. *"Qualitative researchers study things in their natural settings, attempting to make sense of, or interpret, phenomena in terms of the meanings people bring to them."* Denzin and Lincoln (1994:2<sup>4</sup>).

### **Quantitative Data**

Quantitative data is information about quantities and therefore numbers. On a conceptual level, quantitative data is concerned with discovering facts about social phenomena and data are collected through measuring things. Quantitative researchers gather data in a numerical form from which can be put into categories, or in rank order or measured in units of measurement. This type of data can be used to construct graphs and tables of raw data (McLeod, 2019<sup>5</sup>).

### **Rental (Personal Income)**

Rental income of persons with capital consumption adjustment is the net income of persons from the rental of real property (except for the net rental real estate income of partnerships primarily engaged in the real estate business), the imputed net rental income of owner-occupants of housing, and the royalties received by persons from patents, copyrights, and rights to natural resources. The rental income of noninsured pension funds is imputed to persons and counted as part of rental income of persons with capital consumption adjustment.

### **Resource Advisory Council (RACs) (Distribution of Federal Land Payments)**

Consist of SRS Title II. These funds are retained by the Federal Treasury to be used on public land projects on the national forest or BLM land where the payment originated. Resource Advisory Committee (RAC) provides advice and recommendations to the Forest Service on the development and implementation of special projects on federal lands as authorized under the Secure Rural Schools Act and Community Self-Determination Act, Public Law 110-343.

<sup>4</sup> Denzin, N. & Lincoln, Y. (Eds). (1994) Handbook of qualitative research. Sage Publications, Inc.

<sup>5</sup> McLeod, S.A. (2019, July 30). Qualitative vs. quantitative research. Simply Psychology. <https://www.simplypsychology.org/qualitative-quantitative.html>

## Glossary S-Z

### **Sales**

In input-output modeling, Sales is an industry's total annual sales (gross receipts), both to other industries and to consumers as well. Sales is representative of all four Classes of Worker. For the Retail (44), Wholesale (42), and Transportation (48) sectors, sales to consumers is not included in the final figures. Total sales figures sourced from EMSI in this report follow this logic.

### **Standard Occupation Code (SOC)**

The Standard Occupational Classification (SOC) system is used by Federal statistical agencies to classify workers into occupational categories for the purpose of collecting, calculating, or disseminating data. All workers are classified into one of 840 detailed occupations according to their occupational definition. To facilitate classification, detailed occupations are combined to form 461 broad occupations, 97 minor groups, and 23 major groups. Detailed occupations in the SOC with similar job duties, and in some cases skills, education, and/or training, are grouped together.

### **State Government (Distribution of Federal Land Payments)**

Consist of: (1) federal mineral royalties and (2) portions BLM revenue sharing. States make subsequent distributions to local government according to state and federal statute.

### **Supplements to Wages and Salaries (Personal Income)**

Consists of employer contributions for government social insurance and employer contributions for employee pension and insurance funds.

### **Taxes Paid (NAICS)**

Taxes on production and imports with subsidies subtracted.

### **Teacher (School District)**

A person licensed pursuant to chapter 391 of NRS who is classified by the board of trustees of the school district (1) As a teacher and who spends at least 50 percent of his or her work year providing instruction or (2) As instructional support staff, who does not hold a supervisory position and who spends not more than 50 percent of his or her work year providing instruction to pupils. Such instructional support staff includes, without limitation, librarians and persons who provide instructional support, discipline to pupils

### **Total Sales**

The given industry's total annual sales (gross receipts), both to other industries and to consumers as well.

### **Unemployed**

All civilians 16 years old and over are classified as unemployed if they (1) were neither "at work" nor "with a job but not at work" during the reference week, and (2) were actively looking for work during the last 4 weeks, and (3) were available to accept a job

### **Wages and Salaries (Personal Income)**

The remuneration receivable by employees (including corporate officers) from employers for the provision of labor services. It includes commissions, tips, and bonuses; employee gains from exercising stock options; and pay-in-kind. Judicial fees paid to jurors and witnesses are classified as wages and salaries. Wages and salaries are measured before deductions, such as social security contributions, union dues, and voluntary employee contributions to defined contribution pension plans.

## **Appendix B: Explanation of Process/Terms**

This document is a collection of primary and secondary data collected by a variety of sources. Some of the terminology, processes, and ways of viewing the data may be foreign to the reader.

You can find explanations of a few concepts used throughout the report over the next few pages.

## Indexing of Data

This report uses both tables and figures to represent the data to the reader. While most of these are straightforward, one commonly used figure throughout the document that may not be as easy to understand are the **figures with indexed data**.

Indexed figures in this report start the data at a common starting point. Here, this is at 100 in the first year of the graph, which is most often at the year 2010. From that point, future years are measured as a ratio against the base year. For instance, say in 'County A' there is a population of 10,000 in 2010 which lowers to 9,000 in 2011 and is raised to 12,000 in 2012. The indexed figure will show a base of 100 in 2010, lower to 90 in 2011, then raises to 120 in 2012.

These numbers are found by using the following formula:

Indexed Value for Current Year = Current Year Value / Base Year Value \* 100

In our previous example of 'County A':

2010:  $10,000/10,000*100 = 100$

2011:  $9,000/10,000*100 = 90$

2012:  $12,000/10,000*100 = 120$

Graphing data indexed by a base year makes seeing trends easier and faster. Here we can tell that population dipped from 2010 to 2011 then rose past the 2010 number to a much higher population. While this may seem obvious for a single data source, it becomes less so when a variety of items are being compared to each other.

Let us say that we also have population figures for 'County B' and for the 'State'. In County B the 2010 population was 50,000, 2011 was 49,000 and 2012 was 52,000. For the State, population in 2010 was 600,000, 2011 was 610,000 and 2012 was 700,000

For 'County B' our Indexed Values are:

2010: 100

2011: 98

2012: 104

For the 'State':

2010: 100

2011: 101.7

2012: 116.7

With these values, indexed all to 100 for the same base year of 2010, we can now easily measure the population changes for areas with completely different magnitudes of population.

County A and County B both lost 1,000 total population between 2010 and 2011, however County A lost 10% of its total population while County B lost only 2%. In that same year the State gained 10,000 people, but due to its much higher starting point, it was a gain of under 2%.

Let us now look at the population from 2010 to 2012. County A has gained 2,000. This is the same gain as County B has in the same time period, but both pale in comparison to the 100,000 people the state gained. However, when we look at the indexed data values, another story emerges. County B has a gain of 4% for the population. This is certainly an improvement from 2011 when population was lost. However, when we compare that to County A, it doesn't seem as impressive. County A has an increase of 20% over the time period. This is a substantial change compared to the 4% of County B. And let us not forget about the State. While it gained an amazing 100,000 population over this period, it is only a 16.7% increase in total population, less than County A's growth.

This is the reasoning behind using indexed data for figures/graphs throughout this report. Be it Race and Ethnicity, Housing, or Jobs by Industry, numbers in the same sphere are often needed to be compared, even if those numbers have values of different magnitudes. Indexing of the values allows a quick and easy comparison for the reader.

## Inflation Adjustment

Data in this report is shown for a variety of years. As often as possible the data is represented in a way to optimally compare it to previous years. Apples-to-apples so to speak. Dollar figures throughout the document in tables will often be inflated to accomplish this adjustment. Federal Reserve Bank of St. Louis, Economic Research Division, annually publishes an implicit price deflator to use for this purpose:

<https://fred.stlouisfed.org>

Using this data, the report modifies dollar amount to show in like terms. If a table has data from 2010 through 2016, the dollar amounts generally will have been adjusted to all show in 2016 dollars. If it shows through 2017, then the table generally shows in 2017 dollars. There is a note below each table with dollar figures represented stating the year the dollar figures are represented as.

This is done to be able to best compare years against each other. In uninflated data, if a county's per capita income went from \$28,000 in 2010 to \$33,000 in 2017, that seems like a very large increase. However, when we review that in data that has been adjusted for inflation, the \$28,000 in 2010 dollars shows as \$31,374 in 2017 dollars. Thus, our per capita income has grown less than \$1,700 in the five-year stretch, with inflation being perceived as responsible for over \$3,300 of the original difference.

## Suppressed Data

When data is gathered first-hand by public or government agencies, such as the US Census Bureau or the Bureau of Economic Analysis, suppressions are created to comply with laws and regulations to protect the privacy of the reporting businesses. Suppressed data also may appear in the school district data. Data here may be suppressed by FERPA regulations, or the Family Educational Rights and Privacy Act of 1974.

These suppressions, or non-disclosed data, show in this report generally as 'Insf. Data' (Insufficient Data), a hyphen, '-', or as less than 10, '<10'. The hyphen implies that there is data, but with it being non-disclosed, we do not have an estimate for it (this is most often seen in wage data for industries). Less than 10 implies that there is a nonzero amount (most often seen as total businesses in a region) that is somewhere between one and nine, inclusive.

## Poverty

### Definition

The Census Bureau gives the following **definition of poverty**: *The Census Bureau uses a set of money income thresholds that vary by family size and composition to determine who is in poverty. If the total income for a family or unrelated individual falls below the relevant poverty threshold, then the family (and every individual in it) or unrelated individual is considered in poverty.*

This definition covers the poverty threshold, but not the poverty guidelines.

### There are two different poverty levels?

Yes, the federal government has two separate measures of poverty. The first is the **Census Bureau's "Poverty Thresholds"**. The second is the **Department of Health and Human Services' (HHS) "Poverty Guidelines"**. These are distinct terms with different formulas and different uses. The main use for the poverty thresholds created by the Census Bureau is statistical; that is, it is used in the calculating of the total number of people in poverty. HHS's poverty guidelines are for administrative purposes, mainly used to determine financial eligibility for certain programs.

### How does the makeup of the household affect each poverty level?

Both the thresholds and guidelines **take into account the total number of people in the household/family** that is being assessed. A two-person household has a lesser monetary level to be considered in poverty than a four-person household in both the threshold and guidelines. The guidelines do not factor in age in the calculations. The thresholds do, with both the total number of children and, for one- and two-person households, the elderly, taken into account.

### Are there cost of living adjustments based on where someone lives?

The quick answer is **no, not within the contiguous 48 states**. The poverty threshold has the same monetary level throughout the entire United States for any given year. There is no variation for any state, city, or other area. The poverty guidelines have a single monetary level for the 48 contiguous states and Washington DC, but a separate set of figures for each of Alaska and Hawaii.

### This report is using both the threshold and guidelines.

Any section that gives a count of people in poverty is using the Census Bureau's threshold. This includes the tables found within this section, such as the general population poverty numbers and veteran poverty numbers. Sections that show numbers regarding a part of the population on an assistance program will be using the HHS's guidelines. That includes school free and reduced lunch and WIC beneficiaries, among others.

### How are the poverty threshold and guidelines calculated?

Both the Census Bureau and HHS **update their poverty levels annually using** the Consumer Price Index for all Urban Consumers (**CPI-U**).

The **thresholds** are calculated by updating the original threshold matrix created in 1978 via the CPI-U. The Census Bureau issues preliminary thresholds in January and the final thresholds in September for the previous year. That is, the preliminary poverty thresholds for 2017 were issued in January 2018 and then updated in September 2018 for the final poverty thresholds. This is then used to measure poverty for the calendar year 2017, reflecting the 2017 calendar year price level.

The poverty **guidelines** are issued every January, calculated from the thresholds finalized the previous year. Thus, the 2017 guidelines were issued in January 2017 calculated from the calendar year 2015 thresholds finalized in September 2016. Due to this, the 2017 guidelines are roughly equal to the 2016 thresholds.

## **Appendix C: Source Explanations**

This appendix gives an in-depth look at the different sources used throughout the creation of this document.

*The following sources were used for information throughout the report:*

- ❖ American Community Survey (ACS)
- ❖ Economic Modeling Systems International (EMSI)
- ❖ Environmental Systems Research Institute (ESRI)
- ❖ Federal Reserve Bank of St. Louis, Economic Research Division
- ❖ Headwaters Economics' Economic Profile System
- ❖ Nevada Department of Taxation
- ❖ Nevada Gaming Control Board
- ❖ Nevada Report Card
- ❖ United States Bureau of Economic Analysis (BEA)
- ❖ United States Census Bureau
- ❖ United States Geological Survey

## American Community Survey (ACS)

The ACS is an ongoing survey conducted by the U.S. Census Bureau. Per the Census Bureau:

*“The American Community Survey (ACS) is an ongoing survey that provides vital information on a yearly basis about our nation and its people. Information from the survey generates data that help determine how more than \$675 billion in federal and state funds are distributed each year. Through the ACS, we know more about jobs and occupations, educational attainment, veterans, whether people own or rent their homes, and other topics. Public officials, planners, and entrepreneurs use this information to assess the past and plan the future. When you respond to the ACS, you are doing your part to help your community plan for hospitals and schools, support school lunch programs, improve emergency services, build bridges, and inform businesses looking to add jobs and expand to new markets, and more.”*

The Census Bureau started collecting data for the ACS in 2005. At that point they determined to create three separate estimates for use: 1-year estimates; 3-year estimates; and 5-year estimates. The 3-year estimates were discontinued as of 2013.

Data for the 2005 1-year estimates was collected from January through December 2005 and released in 2006. The first 5-year estimates were released for 2009, with data being gathered from January 2005 through December 2009. Future 5-year estimates follow the same formula. The 2012-2016 5-year estimates have data collected January 2012 through December 2016.

In this document, tables and charts sourcing the ACS will often refer to the last year of an ACS 5-year estimate as the heading year. It is important to remember that this data is not a snapshot of the year (or any single point in time) being referenced, but of the Census Bureau's estimate for the 5-year period.

### Why do we use the 5-year estimates rather than the 1-year estimates or point-in-time estimates?

There are two reasons. The first is that the 5-year estimates gives a larger sample size, giving a more accurate representation of the population, even for those areas with larger populations. This will give a smaller margin of error for all data.

The second reason is two-fold. The ACS does not publish 1-year estimates for areas with population less than 65,000. In Nevada, in 2017, only Clark and Washoe Counties report a population of over 65,000. While we could use the 1-year estimates for the reports of those two counties, it is inappropriate (per the Census Bureau) to compare data between the 1-year and 5-year estimates. Thus, if someone wished to compare the data between, say, Clark and Lincoln Counties, it is necessary that the data be consistent throughout the two reports.

The ACS is used throughout the Demographic, Social, and Economic Characteristics sections of this report.

## Economic Modeling Specialists International (EMSI)

EMSI is a leader in labor market data and covers more than 99% of the workforce in the United States. Per EMSI, their mission:

*“Our mission is to use data to drive economic prosperity. To do this, we inform and connect three critical audiences: people (who are looking for good work), employers (who are looking for good people), and educators (who are looking to build good programs and engage students). Since this vital connection takes place in the context of regional economies, we also work with workforce and economic development organizations laboring to improve economic ecosystems. We are known for our peerless service, our fantastic work-life balance, but above all—our deep commitment to our clients. We are blessed to work alongside such dedicated, passionate customers as we build a stronger economy.”*

While they are headquartered in Idaho, EMSI serves clients throughout the U.S., Canada, UK, and Australia.

Their traditional labor market information uses dozens of government data sources with over 18 billion data points. Job posting analytics surveys hundreds of millions of online job postings and their compensation data observes over 40 million individual compensation observations. These data sources include federal government entities, government entities from all 50 states, and a variety of trusted private organizations.

EMSI data is used in this report throughout the Economic Characteristics and NAICS sections, being the main source for Industry and Occupation data.

<https://www.economicmodeling.com/>

<https://www.economicmodeling.com/data-sources/>

## Environmental Systems Research Institute (ESRI)

Esri is considered the world leader in GIS (geographic information system) technologies.

Per Esri:

*“Esri was founded to help solve some of the world’s most difficult problems. We do so by supporting our users’ important work with a commitment to science, sustainability, community, education, research, and positive change.”*

Esri’s mapping and analytics give access to demographic data in 137 countries with over 75% of Fortune 500 companies using Esri software.

Esri provides its own data and 5-year projections and uses the information from federal government and private industry sources.

Esri data is used in this report in maps and in various demographic areas.

<https://www.esri.com/en-us/home>

[http://downloads.esri.com/esri\\_content\\_doc/dbl/us/G164052\\_US-DataFactSheet\\_WEB.pdf](http://downloads.esri.com/esri_content_doc/dbl/us/G164052_US-DataFactSheet_WEB.pdf)

## Federal Reserve Economic Data (FRED)

FRED is a database maintained by the Research division of the Federal Reserve Bank of St. Louis, Research Division. They have over 500,000 time-series from 87 different sources for the public to use. Per the St. Louis Fed website:

*“The Federal Reserve Bank of St. Louis is the center of the Eighth District of the Federal Reserve System. This District includes Arkansas, eastern Missouri, southern Illinois and Indiana, western Kentucky and Tennessee, and northern Mississippi.*

*The Research Division of the Federal Reserve Bank of St. Louis is responsible for advising the Bank president on matters of economic policy. The Division monitors the economic and financial literature and produces research in the areas of money and banking, macroeconomics, and international and regional economics.*

*A diverse group of Bank publications allows the Research Division to address quickly changing economic trends, explore the relevance of historical and current data for economic policy, and expand the understanding of issues relevant to the Eighth District and beyond.*

*The Research Division also furnishes its working papers to provide insight into current Bank interests and developing theories and to stimulate discussion.*

*This site offers a wealth of economic data and information to promote economic education and enhance economic research. The widely used database FRED is updated regularly and allows 24/7 access to regional and national financial and economic data.”*

The biggest use of the FRED in this report is their measuring of change in the Consumer Price Index (CPI). Their CPI and inflation formulae are used throughout this report to calculate inflated dollar figures in most, if not all, sections.

<https://research.stlouisfed.org/>

## Headwaters Economics' Economic Profile System

Headwaters Economics is an independent, nonprofit research group that works to improve community development and land management decisions. Per Headwaters Economics' website:

*“Headwaters Economics provides original and effective research to help people and organizations develop solutions to some of the most urgent and important issues that communities face. ... Headwaters Economics works with community leaders, landowners, public land managers, elected officials, and business owners. Our goal is to give these partners credible information to help them identify, understand, and solve problems.”*

In this report Headwaters Economics' Economic Profile System (EPS) is used. The EPS pulls data from the Bureau of Economic Analysis, Bureau of Labor Statistics, the Census Bureau, and many other sources and puts it in easy to read and use reports.

The sourcing below each table referencing Headwaters Economics data in this report also shows the sourcing of where the EPS obtained the data from. This can often be a mouthful, such as with the following example from the 'Land Cover' table previously found in this report:

*Source: U.S. Geological Survey, Gap Analysis Program. 2016. Protected Areas Database of the United States (PADUS) version 1.4, as reported by Headwaters Economics' Economic Profile System (headwaterseconomics.org/eps)*

This states that Headwaters Economics reported this data via their Economic Profile System, with original sourcing from the U.S. Geological Survey, Gap Analysis Program PADUS version 1.4.

EPS data is most often used in the Land Use and Fiscal Characteristics section of this report.

<https://headwaterseconomics.org/about/>

<https://headwaterseconomics.org/tools/economic-profile-system/about/>

## United States Bureau of Economic Analysis (BEA)

The BEA is an agency of the Department of Commerce of the United States federal government. Per the BEA website:

### Mission

*The Bureau of Economic Analysis (BEA) promotes a better understanding of the U.S. economy by providing the most timely, relevant, and accurate economic accounts data in an objective and cost-effective manner.*

### Vision

*To be the world's most respected producer of economic accounts.*

### Core Values of BEA

- *Integrity: Maintaining the sterling reputation of BEA and its statistics.*
- *Quality: Producing timely, relevant, and accurate statistics.*
- *Excellence: Fostering staff excellence and recognizing and rewarding employee contributions.*
- *Responsiveness: Providing customers with the programs and services they need.*
- *Innovation: Using technology and new methodologies to meet measurement challenges."*

The BEA is part of the Department's Economics and Statistics Administration and provides a comprehensive, up-to-date picture of the U.S. economy.

In this report we use the BEA's interactive data portal to find regional data, especially for Personal Income. You can find this data in the Economic Characteristics section of the report.

<https://www.bea.gov/index.htm>

## United States Census Bureau

The first census was taken in 1790 and, as required by the U.S. Constitution, has taken place every ten years thereafter. In 1902 the Census Office was placed within the Department of the Interior and in 1903 officially came known as the Bureau of the Census.

The Census Bureau is the federal government's largest statistical agency. Per the Census Bureau, their mission:

*"The Census Bureau's mission is to serve as the nation's leading provider of quality data about its people and economy.*

*We honor privacy, protect confidentiality, share our expertise globally, and conduct our work openly.*

*We are guided on this mission by scientific objectivity, our strong and capable workforce, our devotion to research-based innovation, and our abiding commitment to our customers."*

The Census Bureau provides three separate censuses:

- Decennial Census – Population and housing count every 10 years
- Economic Census – Measure of the nation's economy every 5 years
- Census of Governments – Data on the 90,000 state/local governments every 5 years

The Census Bureau also surveys the population on an ongoing basis, with the most well-known example being the American Community Survey (ACS).

These censuses and surveys are used to create hundreds of reports and the data is also accessible through the Census Bureau's data tools and apps.

<https://www.census.gov/en.html>

## United States Geological Survey – Gap Analysis Project

The U.S. Geological Survey was created in 1879 and is the sole science agency for the Department of the Interior.

The Gap Analysis Project (GAP) is an element of the U.S. Geological Survey. Their mission:

*“The Gap Analysis Project mission is to provide state, regional, and national biodiversity assessments of the conservation status of native vertebrate species, aquatic species, and natural land cover types and to facilitate the application of this information to land management activities. Species and habitat distribution models are used to conduct a biodiversity assessment for species across the U.S. The goal of GAP is to keep common species common by identifying species and plant communities that are not adequately represented in the existing conservation lands network. By providing these data, land managers and policy makers can make better-informed decisions when identifying priority areas for conservation.”*

To implement the mission, GAP partners in the development of four core datasets:

1. A detailed map of the terrestrial ecosystems of the United States;
2. Maps of predicted habitat distributions for the terrestrial vertebrate species for the U.S.
3. Distribution models for aquatic species
4. The Protected Areas Database of the U.S.
